501c-3 and Antique Radio Collections

Friends:

I have been considering reducing the size of my Antique Radio collection for some time. I have tried a number of venues and have been disappointed by the results.

I have had good experience, in the past, in donating collectibles to qualified museums.

Is there a list of 501c-3 museums in the New England area who are actively seeking donations?

Charlie

Alan,

Thank You!

I will add them to my small list of 501c-3 qualified antique radio museums:

- Vintage Radio and Communications Museum of Connecticut

- New England Wireless & Steam Museum

- Antique Wireless Association

If anyone can add to this list I would be most grateful.

In the next few weeks I will add images of the equipment I wish to donate to the photos area.

Best,

Charlie

My Pleasure! When you get the list finalized, can you upload it to the Files section of this group? Other members may have items they're looking to donate.

Probably true. The problem is that when people request membership all I see their Yahoo! username and the email address they give to receive messages. Unless they give me their name or member # in the comments section or the email addresses match up, I have no way of finding them in the membership list.

I am glad we have got this board up and running. Hopefully we can spend more time interacting than we get at meets. I was cleaning up a little Zenith AM/FM yesterday and while doing so found an etching on the chassis itself by the Great radio laboratory, Coatsville, PA. with two years listed underneath the name of the shop which I guess are service dates. I have seen stickers, tags and paper labels from shop has anybody ever seen this type of thing?

Thanks and regards,

Paul

Paul, et al,
Yes, I've seen a number of chassis/s etched with service dates and repair houses.
It is also more common on old clocks.
The stickers, tags and paper labels from shop all have the same problem in being lost over time.
The etch stays.

I want to add my thanks, too. I met some fellow collectors/restorers and had a good time.

Ross, I found a good, functional S76 S meter with an undamaged bezel but missing the glass. Let me know if you're interested.

I sure wish I could've been there for this one! But vacationing in the Caribbean wasn't too bad, either. Not many old radios, though.

So, what interesting finds, deals or stories did folks take away from the Swap Meet and Auction?

From: Paul
Topic: 33 Message: 33

Bought it at Westford in 2010 or '11. It's the orange dial one, with the original no-swivel ant. Bad AM dial cord, restrung. Dirty SW band switch, needed to dismantle the plastic shield around the drum to access the mondo-wafer switch, now clean. Bass control was a volume control- a bad 10 uF was found and replaced, now it's a proper bass control. Thanks, Ross, for the advice.
Took a trip to U-Blu-It to stock up. Sorry, Joe, I needed a FireWire cable that they had, so I got the caps that the radio required. The FM is permeability-tuned, and the osc doesn't track the dial. The schematic and alignement instructions are in German. Always a challenge. This radio is a keeper. There is something about the Nordmende that feels right, an unmeasurable charm.
I think I need to get a table next show- I have a Panasonic RF-2600 that is adequate, a Sony from the same era that is OK. These perform OK, but no charm.
----------End of ramble.

Paul, I need to take some. Right now there's an audio amp intermittent going on, it might be self-inflicted from the bass control troubleshooting I did.

The FM doesn't track the dial. Too high around 88, calibrated for 95.3 by me, then too high at 106 and up, and can't reach 107.9. Puzzling. I may "force fit" the calibration at 88 & see what happens.

From: Paul
Topic: 37 Message: 37

The audio problem was a loose rivet on the volume control. Thanks again, Ross for your advice at the NEARC dinner at Mangia Mangia on 7 May. The FM dial isn't calibrated- the stations are OK at the ends, but the middle of the dial is all wrong. Sharpie pens now come in gold, silver and I think, white. Good investment for the cosmetic restorations and the occasional bad FM calibration :-)
The radio is in the kitchen, pressed into service again.
The photos will be in the photos section- I'll try to make an album.

Hi gang:

Much like Dracula the Tubetalk program is back from the dead. It will reintroduce itself tonite, May 31, at 10 pm on WRCA 1330 AM and streams on their website.

Next weeks guest will be Mike Koste with the DVHRC and a Kutztown May 2013 roundup.

Tune in for fun on AM Radio no less.

Regards.

Paul

From: Alan
Topic: 41 Message: 41

Hi,

I just got a Motorola 89K type 2 console to restore. It has some kind of electromechanical tuning mechanism (works like a telephone dial) that I've not run across before. If anyone has any information on this set or similar to share it would be much appreciated.

Thanks,
Alan

I found a bit more information: It's a clock that could be "programmed" to change stations at specific times.

There seems to be a dearth of information about Motorola home sets from the 30's and 40's.

I have this set. It is similar to the GE G106 set that has a clock.
There are sliders you set to change tuning and automatically set the
radio to your favorite stations.
The Moto works similarly I assume. I have not restored this set yet.
Very high end.

Alan, have a look at the back of the timer. If you see any patent numbers, you can search and view the patent(s) on Google. I have used that tool before and have found that timer devices made by Warren Telechron have good detailed information and drawings in their patents. I don't know about other timer manufacturers. Just a thought

50. Help! Need Tubed Zenith Transoceanic Handle part

Yahoo group: NEARC_Radio
Date: 2013-06-27 17:31:45 UTC
From: radioorphanage
Topic: 50 Message: 50

Last week I picked up a Y600 Zenith TO. It's the last Zenith Tubed TO - you know, with the 1L6 tube in it. Before I could get it home, The handle came apart, and I lost one of the brass pieces that hold the handle to the case. It is the same on almost all the TOs. Does anyone have a junker TO I can get this part from?
Thanks,
Bruce Phillips

Alan, et al,
Thank you. Howard has one, so I'm good.
I must say, I believe this is one of the best benefits of NEARC- reaching other radio guys who can help you out!!
So far only about 50 members have signed up, but when we drop "The Insider", and have the latest NEARC Information posted hear, I expect over 200 will be using this Yahoo Group by this time next year.
If any of you ever need a knob for about any radio, I have almost anything.
Thanks for the help,
Bruce

56. NEARC Insider #15 waqs sent out June 28th. Did you see it?

Yahoo group: NEARC_Radio
Date: 2013-07-02 00:20:43 UTC
From: radioorphanage
Topic: 56 Message: 56

I sent out the latest NEARC Insider on June 28th to 309 NEARC Members who we have email addresses for.
Tom Scarpelli mentioned he did not receive the email.
Did anyone else NOT get the email?
Regards,
Bruce Phillips

The email is below:

New England Antique Radio Club INSIDER #15

6/28/13

It is just 3 months to the Brookline Radio Flea Market on Saturday, September 28, 2013. This is expected to be one of NEARC's best shows ever. Why? Because NEARC will have a FREE BARBECUE with your choice of Pulled Pork Sandwiches or Barbecued Chicken along with baked beans, coleslaw, and a drink- ready at 12:00 Noon after the show. But!!!! We need to tell the caterer how much of what to cook. So you need to respond to me before September 14th with the information about what you want. Here's the deal:

Reply before September 14th:

· NEARC Member: Meal is Free ☐ Please specify Pulled Pork or Barbequed Chicken

· 1 Guest of NEARC Member: Meal is $5 - Please specify Pulled Pork or Barbequed Chicken

· Additional Guests of NEARC Member: Meal is $10: Please specify Pulled Pork or Barbequed Chicken

Reply after September 14th : Meal is $12 each - assuming there is any of either available AFTER the people who responded before September 14th are served.

Reply by email right now: President@... How many people? What are they eating? Pork or Chicken? (Money will be collected at the show)

A Note from Ray Bintliff:

Dear Bruce; Please extend my thanks to the many members of NEARC who sent get-well cards. The cards are much appreciated. Individual replies to the avalanche of cards are beyond my present capabilities. As to my status, I am now at home and receiving out-patient physical therapy. Looking forward to seeing the gang at the next show. Warmest regards, Ray Bintliff

Insider tip #1: Reserve your Table or Tailgate Space for the September 28th Brookline Online ☐ NOW! These tables will sell out way before the show. Our website www.nearc.net is ready to take your table order now. . If you want to pay with any credit card, click the left button at checkout. The right button is to pay with PayPal- if you use PayPal. Tables inside will sell out way in advance of the show, but there is unlimited tailgating. See you there.

Insider Tip #2: Haven't picked up your FREE NEARC Polo Shirt?

At the April 20th, 2013 NEARC Brookline Radio Show, we handed out over 150 Free NEARC Polo Shirts. There are still over 100 Free NEARC Polo Shirts available, and you still have an opportunity to get yours if you have not done so already. This is first come, first served in the order below until they are gone:

· KUTZTOWN: I will personally deliver your shirt to the Kutztown Radio Show in Kutztown, PA on September20/21, 2013. This is an opportunity for the many NEARC Members who live in Pennsylvania, New York, New Jersey, etc. to get their shirt. You must contact me prior to September 14th with your size and pocket preference information. President@...

· BROOKLINE: You may pick up your shirt at the NEARC Brookline, NH meet September 28th, 2013 between 8:30-10:30.

· HAVE AN NEARC FRIEND PICK YOUR SHIRT UP AT BROOKLINE: You may have another member of NEARC pick up your shirt for you at the NEARC Brookline, NH meet September 28th, 2013 between 10:30-11:00. This member must have an email or note from YOU, requesting your shirt, and stating your size and pocket preference.

· WHAT HAPPENS WITH THE REST? Any shirts remaining after 11:00 September 28th, 2013 will be available first come first served for $15 each until 11:30. If there are any left over after this, they will be sold for $15each, first come first served at RADIO XLV in Westford February 16, 2014

Insider tip #3: NEARC Yahoo Radio Group http://groups.yahoo.com/group/NEARC_Radio

We currently have about 50 members who have signed up.

Tell us your full name when signing up.

1) You will have to have, or make a Yahoo email address to sign up.

2) Once you have signed up, you can change where the emails are sent (to your "normal" email address if you'd like).

3) Currently under "Files" on the NEARC Yahoo Group, you can see the Colored Internet version of the latest "Radio News". If you currently get the "snail mail" version, this is a good opportunity to test drive the Internet Version and decide which you'd like next year, The fact that we are putting "Radio News" on the site is one of the main reasons the Group is for NEARC Members only.

4) I believe this will become the BEST BENEFIT you have as a NEARC Member! Click this link http://groups.yahoo.com/group/NEARC_Radio and join right now.

5) Don't believe me? I made a posting to the NEARC Yahoo site yesterday looking for a part missing on a Zenith Transoceanic tube radio. Within an hour, 2 different members contacted me with the availability of the part. Tell me anywhere else you can do that!!

INSIDER Tip #4: After RADIO XLV in February 2014, I will stop sending the NEARC Insider. You will still get NEARC news quarterly in RADIO NEWS, but if you want timely information, the only way you'll see it is to be part of the NEARC Yahoo Group. Just click the link above to join up now.

NEARC Fall Antique Radio
Flea Market & Free Barbeque
September 28, 2013 7:30am-12pm Rain or Shine

NEARC Member & Friends Barbeque 12 Noon

Brookline Event Center-32 Proctor Hill Road, Brookline NH 03033
Exit 6 off Rte 3 Nashua and 9 miles west (Rte 130)

www.nearc.net or call (603) 772-7516

60 Indoor tables and unlimited tailgating space. This is a family event, and with one adult admission, spouse and children under 18 are free. Admission during Dealer setup- 7:30-8:30 is $10. Admission 8:30 to 10:00 is $4, and after 10:00 is absolutely free. There is free onsite parking. Breakfast and Lunch are available inside the Brookline Event Center, and the show is guaranteed to runs Rain or Shine.

See you September 28th at Brookline,

Bruce Phillips

57. Radios, Tubes, Clocks, and STUFF!! in Leominster,MA

Yahoo group: NEARC_Radio
Date: 2013-07-02 00:37:17 UTC
From: radioorphanage
Topic: 57 Message: 57

I was in Leominster, MA earlier today and saw several large rooms in a storage building that a lady and her son are attempting to clean out.
I saw:Over 100 tube radios - most needing work, and part sets.About 12 consoles, several German radios, about a dozen old clocks, test equipment, about 3000 tubes almost all TV tubes, and about 50 larger transmitter tubes. There was also a couple short Wave sets, a couple reel to reels, some lighting, a lot of early computer boards, etc. etc. etc.
Radioorphanage is currently at capacity, but if you are anywhere near Leominster, this is well worth a look. She is paying monthly for this storage, and would like to move this stuff.

Call Dawn Smith at 978 503 8317 to set up an appointment.

I took a couple of pictures, and I'll try to post them.
Regards,
Bruce Phillips

Thanks Bruce. I have some available space in West Boylston, right down rte. 12 from there. I'll give her a call today. Thanks for posting this.
Best Regards,
Howard

Sounds like an ad that my daughter might have to post some day! I'll have
to give a call as well to see what goodies are there.

I noticed that this collection has been posted on Craigslist. I met Dawn and Mike back on the 2nd; they were very nice and showed me around. I made them an offer for the lot, but they declined. Admittedly, my offer was low, but they have not suggested what they are looking to get either. Nice collection, but more oysters than pearls (in my opinion)

I’m sorry this didn’t work out for either of you !
The problem is- you know what the stuff is, and the issues involved with it.
They think they have a goldmine, but it is a lot of work.
My money says if neither of you could buy the stuff, they will still be paying rent on the storage next year.
Regards,
Bruce

Alan, I didn't buy anything because there was really no individual piece that struck me as exceptional. Bruce, no need to apologize. This means I will have more money to spend on 9/28. I have never walked away from an NEARC event without feeling like I got a good deal.

67. Console Radios for sale in York, Maine

Yahoo group: NEARC_Radio
Date: 2013-07-10 22:06:59 UTC
From: gskoldradioscom
Topic: 67 Message: 67

Hi All,

I am out of room, and I have some console radios that I am offering for sale.. They are mostly in "as found" condition, awaiting time to restore.. I have tried to price the radios fairly, but I will listen to offers..

These radios are located up in York Maine (03909), and are offered for PICK-UP ONLY. I am sorry, but I do not have the ability to ship these. The prices here reflect cash and carry.

They are in storage right now, which is part of the reason for the poor photos..

The following radios are for sale:

Zenith 8S154 - $100 - As Found - missing right foot, and only has 2 original knobs.

Zenith 10S690 - $50 - Large console. Record player missing. Door in front of radio missing. Was working when taken out of living room several years ago, so radio should be complete.

Philco 39-116 - $150 - Very good condition. Was playing prior to my move to Maine and I placed it into storage. Worked with Mystery Control (included).

Philco 41-280 - $75 - as found.

That's it for now.. Discounts for multiple purchases!...

Thanks,

George

I was in Londonderry,NH looking at another “collection” a man stated he was selling for his brother.
He had it all “displayed out- every individual tube and meter”. I saw:
1) 2 consoles both in pieces- an AK and a Sparton missing the speaker.
I said “If anyone will give you $50 for either, take their money fast.”
2) About 50 round 3” industrial panel meters and 10 rectangular meters.
He said “My brother says this one here is on eBay for $30”.
I said “ If anyone will give you $50 for all of them, take their money quickly and smile.”
3) About 10 pieces of test equipment- no tube tester, no good meters.
I said “I put this stuff on the free table at our radio meets”
4) About 200 tubes- 100 boxed, and 100 loose nothing special best being 6SN7 and 6AS7.
I said” These are all very common tubes, the best I could offer is $50 for the lot”.
He said “My brother says this tube is $12 on eBay”
I said “What was you brother hoping to get for all of this?”
He said “$1000.00”.
I said “ Sir, If someone will give you $100 and take this all away, take their money fast”.
I could tell I had upset him, I said “Thank you for the look, I’d suggest you put them on Craig’s List or let your brother list them all on eBay”and I left.
This is the case with over 50% of what I look at currently.
Eventually, he and the people in Leominister will get tired of sucking up space and time, and sell it fairly to the next person who walks into the room, or it will end up as landfill.
Bruce

Unfortunate but all to true, and many folks with a basketcase that want too much$ for it have no idea how much time effort and money are required to make a set play safely again. It is not just in the radio hobby but in many where anyone with something old deems it to be worth too much. There is much on ebay that is junk and sold for too much. That is something they cannot grasp. Not that they are bad people, uninformed and they think anyone who won't make their price is a crook.

Paul

73. knob needed

Yahoo group: NEARC_Radio
Date: 2013-07-23 22:20:22 UTC
From: radiohoward69
Topic: 73 Message: 73

Hi Team.

I'm looking for a knob for a DeForest-Crosley model 7D731. This wooden knob measures 1-1/8" diameter at the skirt, 1" diameter at the top, and is about 3/4" tall with 4 inset patterns as shown. It is from a rare radio, so it would be miraculous if someone has one, but I figured I would ask before making a reproduction. Thanks, Howard

81. Collection of early Heathkit's for sale

Yahoo group: NEARC_Radio
Date: 2013-08-02 01:47:05 UTC
From: k1wgn
Topic: 81 Message: 81

I have hundreds of Heathkits (mostly pre 1960 and mostly test equipment) including some rare pieces. Transmitters are gone and audio equipment is spoken for (my son). There are several receivers such as AR1, AR2, AR3, K2, BR1, BR2, GR78 and GC1A. There are many parts sets. Included is a "mock" V3 battery powered VTVM. I will only sell the collection as a lot. Price negotiable.

As they say, "health forces sale". I have Parkinson's Disease and it has become very difficult to solder, etc. I'm also trying to avoid "divorce forces sale" as I'm under orders to down size.

BTW, the theme at the AWA conference this year is Heathkit.

I will be happy to put together a list and/or send photos to interested parties.

Steve, K1WGN NEARC #247

Hi Steve: I would be interested in some (but not all) of the Heathkit items. If you would be willing to part some out could you e-mail a list? Also I am interested in what else you have left - for example any Hammerlund items. Can you send me a list? Will be glad to drive down your way.

84. For sale - Lot of 300+ tested-good antique radio tubes

Yahoo group: NEARC_Radio
Date: 2013-08-06 21:42:09 UTC
From: wjeffrey
Topic: 84 Message: 84
Attachments: 1 described; binary payloads are missing from this source WARC

I am Bill Jeffrey, NEARC #611. I have collected and restored antique radios for 30 years. During that time I have accumulated a large number of antique vacuum tubes used in antique radios. I have tested about 300 of them, and put these in seven of the nice white 16x16 inch egg crate boxes from Antique Radio Supply in Tempe AZ.

The time has come for me to close out my collection of radios and tubes. I am attaching the inventory of these 300 tested tubes - I hope the yahoo grop can handle attachments, but if not, email me for a copy. Again, all of these tubes are used, all of them are tested, none of them have individual boxes.

If you have interest in purchasing these 300 tubes, please let me know. I am located in Wells, Maine, so transport in New England is easy. At this time, I am not interested in cherry-pickers. I know, I know, everyone wants the globe 45's. If I don't raise any interest here, perhaps I will pull them out myself and ebay them - but I would rather not.

I don't yet know what I will do with the remainder of my tube supply, but if and when I get them tested and sorted, I would be glad to send out the inventory.

Thanks

Bill Jeffrey.

89. Early Capehart record player

Yahoo group: NEARC_Radio
Date: 2013-09-08 15:03:27 UTC
From: k1wgn
Topic: 89 Message: 89

A friend has discovered an early Capehart record player in the Higgins House on the campus of the Worcester Polytecnic Institure. His email to me is included below. I promised to see if the unit has significant historic value. (See two photos uploaded to a new folder.) You can reply directly to him at his email address at the end of his comments.

Thanks, Steve Siter, K1WGN@...

==========\
=

Hi Steve,

Here is the writeup I did after inspecting the old record player, plus several photos I was given. The opening is about 2 feet wide. Aldus Higgins built Higgins House in the 1920s; some of the beams were supplied by Wendy's grandfather, who had a wrecking company at the time. They came from an old horse barn; the house is supposed to have had a certain atmosphere for a few years.

"I took a look at the record player. It appears to be a commercial unit - there is a Capehart nameplate in the back of the turntable/changer/flipper(?) with what appear to be a bunch of patent numbers on it. Need more light and a magnifying glass to be sure of what else the nameplate says. The finish is a brown deckle finish which appears to be commercial. The drive motor is underneath, connected to a fairly complex open gearbox under the turntable by a spindle with what seem to be deteriorated flexible couplings.

It might be possible to remove motor and turntable as a unit (they appear to be mounted on a frame) if the door frame was removed, otherwise it would probably have to be removed in pieces and reassembled with proper spacers between motor mount and turntable deck. It appears to be an interesting electromechanical device from the early era of sound reproduction. The connection with Aldus Higgins is uncertain. He may well have designed it and built it from commercial components. I would think it would be worth a try to save, at least for a while. We need an audio history expert to evaluate it. I have a possible lead to find one and will forward this description and the photos to him."

We would appreciate any information you might be able to dig up. Please let me know if someone would like to see it.

Thanks,

Chuck

Capeharts are very interesting. They play both sides of the record.
Some are very valuable (500 series) some are much less. Definitely worth
saving.
Fred Rice is the worlds Capehart expert.

91. Ferrite Antennas & Philco Tube Portables

Yahoo group: NEARC_Radio
Date: 2013-09-10 14:54:59 UTC
From: GaryT
Topic: 91 Message: 91

I've heard that Michael Schiffer's book, "The Portable Radio in American Life", claims that the Philco 631 tube portable radio (1950) was the first portable radio to use a ferrite loopstick antenna. Ads for this radio suggest the same, touting its "Magnecor" internal antenna.

Does anyone know of an earlier radio with a ferrite rods instead of a loop?

I have a Philco B651 (1954) which looks nearly identical to the 631 photos I've seen. My hunch is that the handle and Philco emblem below the speaker were metal on the earlier 631; they are plastic on the B651.

If anyone is familiar with the Philco 631, I'd appreciate info about whether the handle etc is metal. Thanks!

From: Mark Nelson
Topic: 91 Message: 93

The claim that the 631 was the first to use a loopstick seems credible, given the state of the art of ferrite material then. It had been used in a limited way in the late 1930s as tuning rods for inductors (instead of variable capacitors) in some radios, and was very widely used in tunable TV signal boosters from about 1948 onward. Making rods or bars of sufficient size and durability for portable AM radio antennas would have come along shortly after.
But alas I do not have personal knowledge of Philco's use of it.

Alan, et al,
I've bought dozens of dial covers from Mark Palmquist (1-770-923-8929) in Georgia.
He will make a dial covers for almost any radio- assume about $25 with shipping.
He has hundreds premade, but will make about anything with a tracing of the "hole" in the case.
His email is jmpalm@... and you should be able to see his work and his inventory at http://jmpalm.home.mindspring.com

Alan,
I have purchased dial covers from Mark Palmquist and also from http://artdecoradios.ecrater.com/. Both make very good quality covers and, although I've made my own, I find it more cost effective to pay them to make one for me.
Can you clarify, however, that you are referring to the clear plastic dial cover and not the brown molded plastic surrounding the dial?

Date: 2013-09-29 18:46:46 UTC
From: <NEARC_Radio@yahoogroups.com>
Topic: 105 Message: 105

Enter your vote today! A new poll has been created for the
NEARC_Radio group:

Several people at the Flea Market expresed interest in learning the basics of radio repair/restoration. How interested would you or a friend be in having NEARC run one or more classes on the subject?

- Yes, I'd be interested in learning how to do both.
- Yes, I'd be interested in learning how to repair/restore my electronics.
- Yes, I'd be interested in learning how to repair/restore my cabinets.
- No, I already know how to do that stuff.

To vote, please visit the following web page:
http://groups.yahoo.com/group/NEARC_Radio/surveys?id=2794502

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

From: Art Bevilacqua
Topic: 105 Message: 110

I was also getting that response, but then noticed that I wasn't logged in to Yahoo. Once I logged in everything became available, Art

111. Radios available

Yahoo group: NEARC_Radio
Date: 2013-10-02 13:01:02 UTC
From: Mark Nelson
Topic: 111 Message: 111

After the swapmeet last weekend I drove to Middleton MA to pick up some radios I'd gotten on Craigslist. A mix of late '30s to mid-'60s table sets, very cheap. The guy said that a buddy did house cleanouts and had dropped off a bunch of radios and electronics. Mostly they're dusty and unremarkable, but he also had a big Telefunken table set (the kind with the pushed-in looking face and lots of pushbuttons), a Superior (I think) tube tester and one of those RCA clones of the Zenith Transoceanic, all in apparently pretty good condition. He's probably a motivated seller since he's beginning a home renovation and needs space.

Let me know if you're interested and I'll put you in touch.

Mark Nelson

I like the Telefunken sets. Let me know as I live close to Middleton and
it would be an easy pickup!
Thanks,

I would like to check on those as well, I also live right next door to Middleton too.

Perhaps John and I can have a wild race over there to the treasure ala that 1960's movie "It's a Mad Mad Mad World", the one with Jonathan Winters, Buddy Hackett, Sid Caesar, etc.

115. Introducing myself

Yahoo group: NEARC_Radio
Date: 2013-10-07 03:26:41 UTC
From: <ianmgordon444@...>
Topic: 115 Message: 115
Attachments: 1 described; binary payloads are missing from this source WARC

Good Evening:

My name is Ian M. Gordon and I am very happy to be a member of NEARC. I am a major market radio broadcaster with a 23 plus year career. Most of my life, I have been a great fan of classic radio shows and associated receivers; especially from the Art-Deco and Mid Century era's through early transistor.

I am specially interested in table top phonographs and radio/phono combo's spanning between the late thirties through the early 60's; especially my top want: The Philco Beam of Light, Zenith Cobra-Matic and RCA New Orthophonic.

Since April of this year, I have been studying the hobby diligently to get a sense of current market conditions and to zero in on the radio's that I love the most. My philosophy is never quantity but quality. My goal is a small but significant collection of receivers that appeal both technically and artistically.

I would welcome any opportunity to get a couple of the more approachable things on my list for a great price as my motives are not primarily profit oriented. And I love looking at collections and testing things before buying them. I also have a substantial collection of classic radio shows and I am more than happy to share them with the membership.

Attached to this message is a small PDF presentation of some of my favorite radio's. My thanks and full acknowledgement to the various radio owners and books where the photo's were taken from. No profit motive and no public publishing. I welcome feedback as well as any opportunity to see or hear them.
I live in Connecticut and can travel the entire New England area.

Thank you for reading.

Ian M. Gordon
CBS Radio Hartford
CT Audio Society

Welcome! You have very good taste in radios. I'm in MA but grew up in
Monroe, CT and still have relatives that I visit their regularly. About
the only thing I have right now that matches your pictures is the Bing
Crosby unit. I sold off a few of the larger Zenith consoles in the last
couple of years as I am out of room. (aren't we all?)
I do have a matching set of RCA orthophonic pieces. One is an AM/FM radio
and the other is a matching record changer. The both use the same brass
legs and are of that light blonde wood variety.
Let me know if you'd like to see some pictures and I can send them along.
I had a Zenith Cobramatic until last spring, when someone made me an offer
for it I couldn't refuse.
Thanks for posting.

118. Zenith Shutter Dial

Yahoo group: NEARC_Radio
Date: 2013-10-10 01:31:23 UTC
From: <ianmgordon444@...>
Topic: 118 Message: 118

Hi Folks:

Thank you for reading my introduction and for your gracious comments. At Brookline and Kutztown, I was able to see and hear a few of these Zenith's. Artistically and technologically they are beautiful. My next step is to ask for opinions about any differences between the lower tube models and the 12S series from 1938? A recent Radio Attic ad and other websites also introduced me to the 12S265, 266 and 267 models. If anyone has one of these, I'd enjoy seeing it in a home setting and getting an idea of what a fair price for one well restored is.

Best:

Ian M. Gordon

119. Olympic Opta for sale

From: <howieducky@...>
Topic: 119 Message: 119

Hi there. I'm doing an "inventory restructuring" under strict advisement from Wife. This set is similar to the Loewe Opta 1781. Could be a higher end model and has some interesting features. No back, so I don't know the actual model #. I uploaded the pictures to a folder - hopefully they will appear soon. $60USD for any NEARC member in good standing with the club. Regards, Howard

From: <ianmgordon444@...>
Topic: 120 Message: 120

Good Evening:

I will not clutter up this board with unnecessary want ad's although as a new member it's important for me to get the message out that I am seeking a few favorites.

This unit is very likely well out of the realm of affordability for me although my knowledge of price has grown in recent days due to a couple of units changing hands.

A mentor showed me this unit and it amazed me with it's technology and sound for the year of manufacture. His example is impeccable and creates a very high standard.

My interest in ownership is for bragging rights, listening enjoyment and sharing it with friends and audiophile associates. I have NO profit motive at this time. If you or someone you know, has one and they are willing to give me a fair price that isn't gauging under the proviso that it is not flipped, than I am the person to sell it to and I will pay in cash. I am seeking a correct and completely restored example.

At the very least, I would welcome the opportunity to hear one again in a home setting from a fellow collector. I can travel to the CT, NYC, MA, NJ an NH areas.

Ian M. Gordon

121. 1940's Studio Equipment?

Yahoo group: NEARC_Radio
Date: 2013-10-19 15:20:06 UTC
From: <alanfinger@...>
Topic: 121 Message: 121

Hi,

The Marblehead Little Theater is putting on a live production of It's a Wonderful Life radio play in mid-December and they are looking for props to use as 1940 vintage broadcast studio equipment -- Sound board, record recorder, microphones, etc.

If you have any of these things or know someone who does (or items that could "pass" with a contemporary audience) and are willing to lend them for a few days, please let me know.

The club (and you) can get credit and a chance to get some others interested in old time radios.

Thanks,
Alan

122. Large Collection of Ham Gear, Tubes, Test Equipment, Etc. in Milford, ME

Yahoo group: NEARC_Radio

From: <radioorphanage@...>
Topic: 122 Message: 122

A couple weeks ago I saw a very large collection (over 100) of Ham Radios in Milford, ME (outside Bangor). There were enough Boat Anchors to sink the Bismark! Besides all the Hammerlunds and Hallicrafters, the man also had a lot of test gear, broadcast sets and lots of tubes. His name is Rick, and he owns A&R Variety at 81 County Road in Milford. His phone # is 207-944-1865, and his email is rllacadie@yahoo.com . I will post some pictures so you can see what he has. All I bought were a couple Heathkit Amplifiers, but he was very reasonable. Regards,
Bruce Phillips

I just posted the Chronicle segment to the files section of this group.Bacause of its size, it's broken into 4 parts and will be available for a limited amount of time.

Enjoy!

Alan

124. Scott Allwave Cabinet- Can you identify this one?

Yahoo group: NEARC_Radio
Date: 2013-10-27 17:51:26 UTC
From: <radioorphanage@...>
Topic: 124 Message: 124

I have a 1936 Seven knob, Scott Allwave in this cabinet.
Can you Identify the cabinet by name?
It doesn't seem to match any of the cabinets in Stein or Slusser's books
I'll add a picture to the photo files.
Thanks Bruce

125. DeVry Preamp and Power Amplifier- What tubes go in Power Amplifier?

Yahoo group: NEARC_Radio
Date: 2013-10-27 18:00:28 UTC
From: <radioorphanage@...>
Topic: 125 Message: 125

I picked up this Stereo Preamp and Stereo Power Amplifier built years ago by someone doing a DeVry Tech school correspondence course. I've never seen either before, and find nothing on the net about them. The Preamp has all the tubes, but the Power Amplifier had only the 5U4 Rectifier, and six empty 9 pin sockets. Can anybody hazard a guess as to what tubes go in the 6 empty sockets?
Pictures are posted.
Thanks,
Bruce

Bruce, If I had to guess, 4 6BQ5 (2 in PP for each channel) and then 2 12AU7 (1 per channel) for 1st audio stage and phase inverter.

Howie,
My guess too. I’m just amazed at the size of those output transformers to drive the 6BQ5s. I suspect they could take a pair of 6L6s (but they’d be tuff to stuff in those sockets).
Thanks,
Bruce

128. RE: DeVry Preamp and Power Amplifier- What tubes go in Power Amplifier?

It's too bad you don't have the schematics or build documentation. DeVry had great assembly manuals that taught the theory while you were building the project. If you get a chance, take some pictures of the underside.

Trace out which pins go to filament, coupling cap and output transformer. Most likely either 6BQ5/7189 or 6793 for the outputs. Then measure filament voltages without the 5U4 in place. The other two are most likely 12A*7 but could be 6EU7, 6GH8, 7199 etc.

131. Largest Collection / Hoard of Old Radio Stuff ever seen in New England

Yahoo group: NEARC_Radio
Date: 2013-11-04 00:20:36 UTC
From: <radioorphanage@...>
Topic: 131 Message: 131

NEARC Yahoo Group Members,
I recently viewed the largest accumulation / collection/ hoard of old radios, HAM radios, tubes, test equipment, books & magazines, components, etc. that I have ever seen in one place in New England in my 40+ years of collecting. It is in the Plymouth, NH area and fills the full basement of a large house, up and downstairs of a Gambrel garage, and a shed/workshop. There is more goodies here than were at our last Brookline show- maybe at the last two Brookline shows.
50+ Ham Radios- National, Halicrafters, etc.
200+ Antique Radio and speakers
3000+ books and Magazines going back to the 1920s- most organized in file cabinets by date
Full later model Sencore Test bench
5000+ tubes including many HAM tubes
You will not believe the amount of Stuff here
You can contact Steve, the owner at snkidder@roadrunner.com mailto:snkidder@roadrunner.com
These were his father’s stuff.
Steve is easy going, and not looking for a fortune.
He is a HAM himself, and aware of the value of what is there.
If you treat him fair, he will treat you more than fair.
Steve works, so I’d suggest you make an appointment for sometime on the weekend SOON if you’d like to see this stuff before the snow flies. The basement is heated, but the Garage and shed are not.
Bring your own boxes to put your treasures in.
Plan on spending a minimum of 4+ hours or so – if you plan on seeing more than half of it.
20+ pictures are in the photo gallery under Plymouth Collection.
Bruce

141. Reception question.

Yahoo group: NEARC_Radio
Date: 2013-11-07 01:00:03 UTC
From: tubetalk1
Topic: 141 Message: 141

Greeting folks:

I have a nifty little 7 tube Zenith am/fm from the 50's. Sounds very fine and has been serviced. I was listening to classical music on 99.5 FM WGbH from Lowell Ma. it comes in super. Today I moved the set to a different room and during the music I hear what seems to be two radio communication, could not get all of it but heard a reference to get down to 4000 feet. Heard some more tonite, would this aircraft communication be something anyone else has ever heard on FM. Do I have a set problem. Set has played fine.

Your feedback is appreciated. Thanx.

Paul

Hi,
The aviation voice communication band is from 118 to 136.975 MHz. If you have a 10.7 MHz IF and a strong signal (or poor receiver image rejection), the low end of the band can punch through. Why the AM signal use by aircraft radios is being demodulated, I can't say.

What you are experiencing is formally known as "IF Image". When you tune to 99.5 MHz, the radio's local oscillator is running at a higher frequency, 110.2 MHz. When these two signals are mixed in the mixer stage, the difference frequency (10.7 MHz) is created. This is the IF frequency, and it is this IF signal that is amplified and demodulated so that you can hear the music.

But there is another incoming frequency that can mix with the 110.2 MHz local oscillator and produce a 10.7 MHz signal. In this case, it is 120.9 MHz, since 120.9 - 110.2 = 10.7. In your radio (and all others), this image frequency at 120.9 MHz is supposed to be rejected (filtered out) in the front end of the radio, up in the antenna circuits. Your radio either has poor image rejection, or it could use a front end alignment, since the image signal is getting through.

In New England, 120.9 MHz is used for tower communications at Portland International Jetport. For this image frequency to come through, it must be fairly strong, so I bet you are on the north shore somewhere.

Regarding the fact that aircraft communications signals are AM, and you are hearing it in an FM radio, means that another phenomenon is taking place in the demodulator. There are a couple different ways this can take place. One is known as "slope detection". The other happens in the radio's limiter circuit when the limiter is not doing a very good job. Both are beyond the scope of this discussion, but are commonly seen in inexpensive FM radios, or expensive FM radios that need an alignment.

In your radio (and all others), this image frequency at 120.9 MHz is supposed to be rejected (filtered out) in the front end of the radio, up in the antenna circuits. Your radio either has poor image rejection, or it could use a front end alignment, since the image signal is getting through.

In New England, 120.9 MHz is used for tower communications at Portland International Jetport. For this image frequency to come through, it must be fairly strong, so I bet you are on the north shore somewhere.

Regarding the fact that aircraft communications signals are AM, and you are hearing it in an FM radio, means that another phenomenon is taking place in the demodulator. There are a couple different ways this can take place. One is known as "slope detection". The other happens in the radio's limiter circuit when the limiter is not doing a very good job. Both are beyond the scope of this discussion, but are commonly seen in inexpensive FM radios, or expensive FM radios that need an alignment.

---In NEARC_Radio@yahoogroups.com, wrote:

Greeting folks:

I have a nifty little 7 tube Zenith am/fm from the 50's. Sounds very fine and has been serviced. I was listening to classical music on 99.5 FM WGbH from Lowell Ma. it comes in super. Today I moved the set to a different room and during the music I hear what seems to be two radio communication, could not get all of it but heard a reference to get down to 4000 feet. Heard some more tonite, would this aircraft communication be something anyone else has ever heard on FM. Do I have a set problem. Set has played fine.

Your feedback is appreciated. Thanx.

Paul

Gentlemen,

The partial remains of City Radio formerly in Springfield, MA are available in Belchertown, MA.
NOS parts, capacitors, transitors, tubes, stylus', a few car radios and speakers, a 1923 Atwater Kent, etc.
About 30 pictures are on the site under City Radio. Many of the pictures are duplicates!!! View carefully!
The owner will sell as one lot only. No cherry picking. The owner has a current offer.
If interested contact Donna at donnahavens@msn.com mailto:donnahavens@msn.com

Just click on the Photos button and then on the "Radio City" button.
There are 30 photos that Donna took. MANY OF THEM ARE DOUBLES and even TRIPLES.
Please review the pictures closely to draw your own conclusion.
Do not assume each of these pictures are separate! It is not that big a hoard.

---In NEARC_Radio@yahoogroups.com, <radioorphanage@...> wrote:

NEARC Yahoo Group Members,
I recently viewed the largest accumulation / collection/ hoard of old radios, HAM radios, tubes, test equipment, books & magazines, components, etc. that I have ever seen in one place in New England in my 40+ years of collecting. It is in the Plymouth, NH area and fills the full basement of a large house, up and downstairs of a Gambrel garage, and a shed/workshop. There is more goodies here than were at our last Brookline show- maybe at the last two Brookline shows.
50+ Ham Radios- National, Halicrafters, etc.
200+ Antique Radio and speakers
3000+ books and Magazines going back to the 1920s- most organized in file cabinets by date
Full later model Sencore Test bench
5000+ tubes including many HAM tubes
You will not believe the amount of Stuff here
You can contact Steve, the owner at snkidder@... mailto:snkidder@...
These were his father’s stuff.
Steve is easy going, and not looking for a fortune.
He is a HAM himself, and aware of the value of what is there.
If you treat him fair, he will treat you more than fair.
Steve works, so I’d suggest you make an appointment for sometime on the weekend SOON if you’d like to see this stuff before the snow flies. The basement is heated, but the Garage

and shed are not.
Bring your own boxes to put your treasures in.
Plan on spending a minimum of 4+ hours or so – if you plan on seeing more than half of it.
20+ pictures are in the photo gallery under Plymouth Collection.
Bruce

From: tubetalk1
Topic: 156 Message: 156

Greetings Folks:

Anyone got any tricks to share on cleaning paint droplets off bakelite? I have used a soft toothbrush and warm soapy water with good results but am working on a Zenith with no luck, maybe it is oil base paint?

Also there is a little gummy stuff on it, maybe an adhesive of sorts, maybe some goo gone would remove?

Appreciate your thoughts.

Hi Paul,

I've had good luck with "Goof Off" on both wood and bakelite. Just to be sure, run a test on the bottom but it should soften the paint without affecting the finish. If the paint doesn't come off with a cloth, I like to use wooden pieces such as popsicle sticks, tongue depressers, and, for crevesses, skewers to scrape the offending material. 3M also makes blue "No Scratch" pads but I would use those gently only if nothing else works.

Good luck!

Alan

To remove adhesive, as from price stickers, I use naphtha (Ronsonol lighter fluid). Works on paper, metal, etc -- don't recall if I've used it on Bakelite but I don't think it would hurt it. As above, test a drop on the bottom.

Topic: 156 Message: 159

Bakelite is impervious to most everything, except, alkali cleaners, like 409 as well as ammonia such as certain window cleaners. If these cleaners are used the appearance is that a film of nicotine is being removed with a mild phenol odor. The chemical is breaking down the outermost layer of the Bakelite, the shiny layer. When rinsed, the result is clean but the shine is gone and it is very difficult to put it back...

To remove the paint: Since the Bakelite is not reactive to most petroleum solvents, Solvent paint remover such as 5F5, Savogran and many others can be used. If unsure of the results try the remover on the inside of the cabinet, wait at least 1/2 hour for the test. I have NOT tried citrus based paint removers on Bakelite...

To remove the tape gum: Goo-Gone, as noted, will remove most gummy adhesive, dried masking tape requires an application of Propanol 91-100% on a cloth to the dried tape. The paint remover will remove the masking tape.

Howard,

The tube can be rejuvenated so long as it does not display gas. From your description it does not. Certain EICO crt testers can be set for a similar tube and clip leaded to an adapter to do this.

The tube will also respond to a booster, FWIR there were no boosters for the type number so one will have to be fabricated to do the job.

From: <howieducky@...>
Topic: 166 Message: 174

Thanks John. There isn't a magnet, but there is a metallic sheet wrapped around the neck of the tube that connects to a cone shaped metal shroud that covers the first few inches of the tube past the neck. I grounded that to prevent discharge to the chassis, but I'm not sure originally how it was connected to the tube. The Photofact makes no reference to the shield, nor is it pictured, so I'm not sure if my positioning is correct. Perhaps I'll upload some pictures. Thanks again for your help.

175. Re: 7JP4 CRT

Yahoo group: NEARC_Radio
Date: 2013-12-10 14:53:41 UTC
From: Mark Nelson
Topic: 166 Message: 175

That shield is "mu metal" which is just a magnetic shield. No electrical connection is needed, though it probably doesn't hurt. The 7JP4 is all electrostatically deflected and focused, so extraneous magnetic fields (such as from the power transformer, if any) are bad for picture quality, though they cause no permanent damage.

If I recall correctly, picture tubes of that era could withstand up to twice the rated heater voltage, and picture tube boosters typically gave 10-30% increase in heater voltage. Is the set a series-string (AC-DC) type or transformer operated? If the CRT heater is just in parallel with the other tubes, you could hook up a separate filament transformer on a variac and run the voltage up to see if there's improvement.

I remember Piexx! My wife and I went to the somehow-related bed and breakfast place there, since each room had a different working antique radio, and the building had a low-power transmitter playing '30s music and programs. The shop downtown (closed when we were there too) was filled with a tantalizing quantity of old radios and electronics. This was several years ago.

That looks like a "generic" mantel radio from about 1933 -- probably made by Continental or Radio Products Co. for various outlets to put their name on. I owned one that looked very much like that for a while. It also had an unusual nameplate, if I recall correctly.
I do see that there's a Cunningham radio in Radio Attic's Archives [http://www.radioatticarchives.com/radio.htm?radio=10729] though it doesn't look like yours. Perhaps a search by tube lineup in Larsen's Locator would turn up a schematic or some leads. I suspect it's a pretty common TRF tube set.

Alan, et al,
I agree that this is a “standard chassis” that many Radio makers used in the 1934-35 era. You will find it in a nice Automatic Deco set I have and a number of other Manufacturers like Deluxe, Colonial, Detrola used it. They all have that globe in the center of the dial. it is a little strange because it is always “Left Handed”, meaning the tuning is on the left, and the on/off volume is on the right. The big question is “How did you add the pictures into you message instead of putting them in a Picture Gallery”?
Bruce

Hi Alan,

The world map logo on the dial and the rear view of the chassis look very much like the Climax Conquistador but in a different cabinet. See http://www.radioatticarchives.com/radio.htm?radio=7380

Good luck!

This may be a different radio, but it looks like the same thing: on p. 258 of Collector's Guide to Antique Radios, 7th ed., 2008, there is a picture of a 1936 Sparton >506< Bluebird noted as $3500+ value.

The book is old, who knows about condition, are the 506 and 566 the same thing????

Good luck,
- Al

Ian, et al,
Ah, THE ICONIC TUBE RADIO of all time!! (Well maybe even with the Fada Bullet, but surely in the top 2, but that brings up the Nocature and a bizilion other sets.....
First, If I was looking to spend serious money for a Sparton Bluebird, I'd review all the pictures and information on www.spartonbluebird.com .
Second, to answer Al's question about Model 506 or 566, a small book could be written, and again I'd point back to that site for info.
In a nutshell, the Model 506 is a wooden "Mantle"radio using the same chassis as the Bluebird. Both Bunis and Stein used the #506 for the Sparton Bluebird in their guides.
To the best of my knowledge, no model # was ever issued for the Bluebird, but 566 was "an open Sparton#" so it started to be used.
As to the specific Bluebird on eBay:
Condition: Well above average for an original Sparton that has not been resilvered. It is difficult to tell about the flaws as the pictures are all from an angle.
The best way to see issues in the silvering is from straight on, but it is a mirror, and most people see a better shot in an angled picture.
You can tell if a Bluebird Mirror has been resilvered by the felt that was glued to the back. Note in the one currently on eBay that the felt is old and deteriating around the edges.
You just can't reproduce that 75 year old look. A resilverd mirror will have new felt or be painted (usually Black).
The knobs, bars,chassis and wooden housing all appear original.
I expect the chrome, particularly on the top bar is a little worse than it looks in the picture, again based on the angle of the photo.
It appears to me that the cabinet has been painted a gloss Black as noted in the mega reflection in the shiny feet/knobs on the bottom front.
This cabinet was originally done in a thin coat of Black lacquer, no where as shiny as it is on this set.
That said, it is still a much better than average Bluebird.
As to final price it will close at on eBay, two other Bluebird have sold on eBay in the last 90 days. One not quite as good as this on 9/16 for $2147, and a real "Beater" with wooden knobs on 9/16 for $1564.
My guess on this one: $3000 +/- $500.
eBay IS the market. This set has all the right answers: Iconic Deco Eye Candy, Famous Designer, relative rarity, good condition, etc.
The above is my opinion of something I can not hold in my hand.
I would request that it not be forwarded, placed on any other Radio Forum, or used to set personal bids on eBay.
Regards,
Bruce

Alan, could you give me a picture of the top of the chassis and the tubes used? That would narrow down the possibilities. Like others that mentioned a generic chassis, I'm thinking RPC or CRC, or possibly Federated Purchaser. Other manufacturers are possible though.

Thank you Bruce and everyone for your information.

This radio was "it" for me years ago when I was first learning about vintage units. I fell in love with Art-Deco at a very early age and long before I knew anything about Zenith and more about Philco than the 90, this was, and is, my all time holy grail receiver; supplanted perhaps by the Nocturne which there are probably fewer in existence then the Stratosphere?

It is my fondest hope that out of all the radios in my "coffee table PDF", that someday I will own this one.
This Bruce is my "49-501".

Happy Holidays:

From: Dick Joltes
Topic: 190 Message: 190

I'm in the process of rebuilding a Telefunken 32183 (circa 1961) and ran into an odd problem. Cleaning the slide switches that control which band is active with contact cleaner locked them up tighter than the proverbial drum. Not sure if the specific plastic in use in this unit is vulnerable to the volatiles, or if residue from the cleaner caused it.

Has anyone ever seen this? Any recommendations for possibly freeing up the slides using another type of cleaner, or is the board in this unit now scrap?

cheers,

dj

Dear NEARC Staff,

I wondered if you know any collectors in your local club who would like to buy an original Wouff Hong from the 1938 ARRL Convention. One went for $900 not too long ago. I do know there are very few originals left. Paint and condition is excellent. This one has been stored for 50 years! I remember my dad having in a display case in the early 1960's and then it was carefully packed away when we moved. It came from the XYL of a Silent Key (former New York Club President) who was at the ARRL convention in 1938. There are a few I have seen that have been repainted. This one has not and is all original!

Please let me know if anyone is interested in this piece of ham history. I am selling it to help with someone's medical bills. Open to all fair offers!

I am looking for the right one. And thanks to the forums, my increased knowledge will help my purchase. This is my most wanted radio and I am planning on attending the Westfield, MA show in February and if someone has one and will be attending, I'd welcome looking at it. For those who have responded to my information seeking posts, I'd enjoy buying one of your examples. You will know who you are selling to and it will not be flipped for a quick buck the next day. My criteria is clear:

* 80% correct to showroom in cabinet appearance and chassis function
* correct tubes germane to the model
* A cash price of under $500.
* I am located in the Fairfield County CT area

Happy New Year

Howard,
This is a “tuffy”.
I’ve had some luck with carpet and upholstery cleaners for taking stains out.
You can patch them from the back with an iron on patch.
But once a cat gets a hold of it, or it starts to tear, you are looking for a replacement.
I’ve seen people use regular fabric pieces, but it really muffles the sound.
Some repros are better than others, but the stuff is pricey.
Bruce

I have heard of people using dry cleaning if the fabric will stand up, I have also heard of those who will use a fusable webbing from a craft store on the back of the cloth to shore it up. When cleaned and looking ok I have seen people use a clear Krylon can on it, if you use too much it doe not look too good though.

Paul

While I have nothing “reliable and proven”, it seems to me that grille cloth from old radios is not so different from vintage clothing. There’s a fair amount of info about conserving and restoring dresses and suits from the ‘30s and earlier, and I suspect much of the techniques would be applicable. (The Textile Museum in Lowell might be a good place to enquire.) The caveat is that is that grille cloth was usually made from lighter material than most clothing, and it was almost always held in tension and rarely cleaned for 70+ years. But it is a completely worthwhile idea to pursue. I have an old console with a scenic brocade grille cloth that would be essentially impossible to replace. Luckily it’s in good physical condition, though quite faded. If you find answers to your questions, we’d all love to hear them. A great article idea for the Radio News.

From: Dick Joltes
Topic: 205 Message: 205

All,

I'm working on an RCA Strato-World portable from the '50s, and was wondering if anyone has ever tried restoring the "leather" covering on one of these cases. This one is in decent shape but has some curling at the edges as well as a few nicks.

Can't quite determine if it's actual leather, leatherette, vinyl, or some other odd material. Various sources conflict with one another.

References appreciated.

cheers,

Dick Joltes

Hi Dick,

It's a material called Tolex. Great Northern Radio sells it in an appropriate weight/pattern: http://gn4radios.com/
There's an excellent article here:

http://www.renovatedradios.com/articlePages/H500%20Restoration%20Guide.pdf

that goes through the complete restoration process.

I've got one disassembled on my "Round-Toit" shelf along with a roll of Tolex. Many of the shapes are quite complex so be prepared for a high effort job.

Good luck and we'd love for you to post pictures and your progress here!

Alan

Thanks for the quick reply. First of all I couldn't believe how I made my request by making three or 4 errors in it. I would like to take a ride with you when the weather breaks. I don't have your phone number, but mine is 207-255-4722 and my name is Barry Dean. I was talking about the Ryder Serice Manuals in the picture, I need voulme 23 but would buy the set if that one is in there, would also like to see some other items. Thanks Again PS If anyone has a spare Voulme 23 that they would sell please ket me know.

Thanks for the information and links on this radio. It seems that the fellow (in Washington state) found the radio among his deceased grandparents belongings. He says it still works and was looking for some history and perhaps a value.

I've forwarded the links to him, that should take care of things for now.

The picture that he sent me is the exact unit you have found, except that the word "Lloyds" in the literature has been replaced by "Essex" on this person's radio. His unit might have been store branded out of Lloyds.

Thanks again, Art

Just to "close the loop" on this topic - after tracing out the tube pins, the missing tubes were two 12AX7's and four 6CM6's for the push-pull output.

Hi Everyone:

I look forward to the show on Sunday and to a great education. I would like to make a couple of acquisitions and I wanted to share just in case you were deciding whether or not to bring them. My standards of correctness and operating condition are high for both cabinet and chassis. 80% correct to showroom is my goal. I thank you for your time. Deal breakers: repainted, no original identifying label or stamped numbers, replacement speakers (speaker must be original), non functioning or non fixable dial light. I pay cash.

Philco 37-610
Philco 16B (2nd version)
Philco M-15
Zenith K412 - brown and black
Zenith B600 Transoceanic
GE H500 - brown with logo bakelite back

Yahoo group: NEARC_Radio
Date: 2014-02-20 02:56:47 UTC
From: Dick Joltes
Topic: 232 Message: 232

All,

I'm finishing up work on one of these rigs (beautiful to start, works a treat now) and the one remaining issue is that the handle is broken. Half is missing altogether, so it's not even a glue repair. Anyone know of a source for either the plastic or a replacement?

Alternately, if anyone has a spare they'd like to let go, ping me off list.

Thx,

Dick Joltes
(Amesbury MA)

John Kendall at http://www.vintage-electronics.com has some RCA 3-BX-671 parts (search for "3BX671" on his site) but he doesn't list any handles. Might be worth a call or email, though, on the off-chance that he has one but didn't list it.

Any chance of some closeup photos of one of the little frobs on the ends of the dial cords that activate the dial cord with the pointer? I think RCA calls them an "eyelet" described as "Station selector pointer drive cords connecting eyelet". I need to fabricate a pair for my Strato-World.

Best regards,
-Steve

Steve,

I just sent a note to John to ask, but from what I hear those handles have not stood up well. I'm half considering trying to cast one in some sort of resin.

I actually have to pull that unit apart one more time, so I can get you a few photos of the cord assembly. Can't post to the group as I don't have a Yahoo address anymore, but I can mail them directly.

cheers,

Dick Joltes

Last Saturday night into Sunday morning, I was performing preliminary repairs on a 1941 vintage General Electric Model L-640 3-band table radio. Shortly after getting it to "work," I was going down the dial and heard Jordan interviewing Alan on WBZ. I heard about three quarters of the interview before the RF section of the unit suddenly died. I still haven't located the cause. Oh well... looks like a typical long form restoration is in the offing (all resistors and capacitors, not to mention cabinet refinishing. But the original electrolytics are amazingly stable.) Perhaps I'll have it all done around the middle of the year. Thanks for the interview, in spite of my L-640's "reaction" to it.

Same problem here. All I see under the "Photos" link are a few random shots from Radio 44.What you should see is a series of folders that members have set up since the start of the group and you should be able to open and view all the photos in each folder. Also, whoever manages the annual photo contest must start sending a confirmation email every time he receives an entry. Email is unreliable, especially when sending attachments. I've sent entries for both Radio 44 and Radio 45 with no indication they were ever received... even though some of the photos have appeared in Radio News and Joe Coco has used them on line.

From: <jeff@...>
Topic: 250 Message: 250
Attachments: 2 described; binary payloads are missing from this source WARC

I was wondering if anyone knows who was selling this Emerson model CS-320 2-band wooden table set at Radio 45 (under the Federal Jr. antenna tuner and behind the Bakelite radio). It was located on Table #1 in the Whittier Room, which is the side of the room closest to the main entrance doors.

I'm almost positive the gentleman selling it is the one depicted in the second photo, but there is not enough resolution to decipher his name badge. I did some research on the set in the hours after the meet and would like to make a second offer, if it is still available.

Jeff,
When you say Table 1, was he in the 3 blocks of 3 tables each against the windows?
Or was he in the row of 5 tables closet to the two doors into the room?
Either way, was the table closest to the left door or right door as you walk into the Whittier Room?

Subject: [NEARC_Radio] Anyone know who was selling this Emerson table set at Radio 45? [2 Attachments]

I was wondering if anyone knows who was selling this Emerson model CS-320 2-band wooden table set at Radio 45 (under the Federal Jr. antenna tuner and behind the Bakelite radio). It was located on Table #1 in the Whittier Room, which is the side of the room closest to the main entrance doors.

I'm almost positive the gentleman selling it is the one depicted in the second photo, but there is not enough resolution to decipher his name badge. I did some research on the set in the hours after the meet and would like to make a second offer, if it is still available.

Hi,
I have an almost complete set. Some RCA and Philco books as well. They
have to go. Soon. Who wants them? Come to Franklin MA and make me an offer.

Not that I'm interested, but if someone is to travel to Franklin shouldn't they have an idea of what you want for them? I always feel it's the seller's obligation to start the negotiation.

This RCA is one of the nicest tabletop pre-war examples I have ever seen and is worthy of buyers attention. I so enjoy making discoveries of things never seen before, at least in my own experience. I look at literally dozens of radio's before seeing something that really catches my eye and this is one of them. The seller I consider one of the best on ebay.

That RCA is one of series of models that has the "Sunburst" dial. There is a variation of such which has a magic-eye. The green glow is contrast by the yellow orange dial. The surface of the dial is embossed in a groups of grating patterns.

Caveat on that model, the band switch has a pot-metal flag assembly that often swells and causes problems. Since it is integral with the tuning it is a difficult repair.

I am very partial to these RCA's myself. I have an 86T that is essentially a parts set, although there is enough of it to get it working with enough time spent on it. The set Chas is referring to is probably the 87T with the tuning eye. I have one myself and know about the pot metal on the band switch. On both sets, the pot metal was cracked and I thought I was going to have a big problem. My son who is a welder/metal fabricator took a look at the part and took some measurements and fabricated a replica from aluminium. These radios are shockingly large compared to what they look like in pictures. The 87T is about 1 ft tall and over 18 inches wide. The 86T is about the same size. I'm an RCA fan and think these are one of the most beautiful dials that were made and with that dial and the tuning eye in the dark, it doesn't get much better than that. They are also very nice performers.

Topic: 255 Message: 259

My solution to the 87T potmetal issue started as a repair with J-B weld. Since the split was at the shaft any torque from tightening the set screws popped it apart. The answer was have an entire new "casting" fabricated. I was still working at the time and was a good friend to the R & D machinist. At his insistence I mapped the part to Autocad and he milled one from 6061 aluminum alloy. Perfect fit and function!

Should someone wish a copy of this print please email. The print is in the form of an importable DXF file and can be printed to jpg.

Some notes on this same series RCA is that they use a slug tuned IF with a very sharp "Q". Further, it is important that the windings of the IF have the correct resistance. They are wound with a litz wire, if a strand is broken there will be a diminished peak to the resonance, the resistance will go up, subsequently, if several strands are broken the output will be noticibly low.

- The set is almost entirely wired with rubber covered wire, fortunately RCA mapped the layout of the wiring and published it to their "RedBook" series.

- RCA also used a quantity of house marked mica capacitors. Age has begun to take its toll on these capacitors which I refer to a "lozenge" style, others prefer a reference to dear poop... They will electrically leak and the housings will split then they will leak and worst, shift value. Replacement with silver-mica dipped works fine.

- The RedBooks also point out critical lead dress, important if re-wiring is to be undertaken.

Fortunately or not, this series of RCA does not enjoy the stigma of Zenith. Yet in a side by side comparison I made with a 6-S-254 and the equivalent RCA chassis 86K7, almost identical circuit, exception only in the tone controls. The RCA was more sensitive and selective and did not have the images that the Zenith had in the highest shortwave band.

A great series of radios!

Regards,

Charles

From: radioorphanage@...
Topic: 273 Message: 273

Alan posted the Press Release for the 9/27/14 Brookline Radio Meet & Auction 2 days ago. If you can get it in any local newspapers prior to the meet, it would be appreciated.
I just added 23 pictures of some of the 150+ radios being auctioned under "9/27/14 Brookline Radio Auction Photos" in the Group Photo section, and the spreadsheet of the full inventory will be on the site shortly. Joe Coco has all the information to update the NEARC website, and I'm sure it will be updated shortly with the meet information, photos, radio inventory, and the capability to purchase tables and outdoor spaces.
See you at Brookline September 27th,
Bruce Phillips
President NEARC

From: ianmgordon444@...
Topic: 276 Message: 276
Attachments: 1 described; binary payloads are missing from this source WARC

Regretfully this great radio that I purchased this year has a shorted output transformer between the coil coupling with the speaker. I am seeking another assembly to get this radio rocking again. A friend of mine in HARPS was helpful in identifying the problem which continues my engineering and restoration education. A picture of the radio is attached. Your help appreciated. I am a purist so it would be great to find original parts. If not, something rationally close to the manufactured period. I detest modern speakers in classic radios. I hope to attend both Kutztown and Brookline.

All the best:

Ian M. Gordon

Date: 2014-09-25 23:19:18 UTC
From: ianmgordon444@...
Topic: 279 Message: 279

Hi Folks:

Looking forward to seeing everyone Saturday. My goal at every meet is to make one good acquisition for my growing collection. I will be wearing a blue turtleneck or blue sweater. Say hello. The following are among my most wanted:

Philco 37-610T
Philco 37-630T
Philco 40-120
Philco 40-140

Zenith H511 Racetrack
Zenith Cobramatic - H664
Zenith Cobramatic - J665

RCA 86T
RCA 6RF9

Paying cash for a price I cannot refuse.

Radios I purchase must have:

Original or reasonably correct refinish, One original identifying sticker or decal, original knobs with proper labels (label reproductions ok), original escutcheon, original dial and most important, the original speaker (repairs ok).

Thank you all.

From: howieducky@...
Topic: 282 Message: 282

Well, I don't know about you, but I had a grand time yesterday! I got to see and converse with some friends, and got some real nice goodies too. Once again, the free table proved that one man's junk is truly another man's treasure. Thanks to the many great deals on parts sets at the auction, some of my radios will now have that part they've long been missing. Even the tart aroma of the mouse droppings in the Silvertone chassis I picked up didn't phase my smile.
Thanks to Bruce, Mark, Ross, Joe, Tom, the folks at the BEC, and everybody who made this a great success. I applaud and thank all of you.

Howard

John,
Try to open a new file instead of putting them in the file I have the pictures of the auction radios.
It will help to see if they are there instead of wading through the auction picts.
Just a sugestion,
Bruce

Not that I'm aware of, but this is the first time I've posted pictures on the Yahoo group and am getting used to the semantics (the tool would benefit from an explicit error such as "pics uploaded but need approval before posting").

I'll try again either tonight or tomorrow night. Will email you when I've attempted the upload.

Thanks, Alan!

John

It's Bruce, and I'm confused about a couple things, but read on, and maybe they will clear up as we go.
1) I've been pretty busy for the past 3 weeks with the Kutztown Radio Show, Brookline Radio Show, and this week, me and my Brother-in-law tore apart the front of my house to change the windows and doors, but of course, it lead to the rotted sill plates, pulling off more siding, and a lot of extra work I wasn't planning on.
So sorry if I'm behind in responding to some of you.....but I think I'm over the hump.
2) Thanks to everyone for making Fall Brookline such a success. The sellers, the buyer, BEC, the auction, the free table (I only had to deal with 3 things at the end), the volunteers, the picture takers, etc. The show is about Radios, but when you really come down to it, it's about the PEOPLE... OK, the PEOPLE and the RADIOS.
3) A number of people took pictures, specifically I interacted with John Gibbons, and Howard Mariotti, but any member that has joined the NEARC Yahoo Group should be able to post them.I know John has tried, and I've seen Howard's picts on his website. Howard, I'll pick out my favorites by Saturday.
4) Alan Finger and I have administrative privileges on the NEARC Website. Alan started the site, and does 95% for the administration. I only step in to backup if I know Alan can't. Alan needs to approve the adding of pictures.
5) If you want to post pictures to the website, I'd suggest you use your own directory, such as 2014FallBrooklineBP, using your initials at the end so we can tell where the pictures came from, as there are likely to be more than one contributor. If they all get lumped in one place it is hard to see what is going on.
6) Alan can pick from these, which pictures he would like to put in the next RADIO NEWS, as he is the Internet Editor, and Joe Coco can pull the pictures he likes for the NEARC Website, and John Gibbons can pull any pictures he wants for the NEARC Facebook page.
7) Maybe I'm speaking out of turn, but I think some additional confusion came in when Jack Smith asked to change his email address in the Yahoo Group and it got combined in with the picture issue.
8) John Gibbons, thank you for starting the NEARC Facebook page. Now I'll have to up my technical savvy just to see it. Hopefully, it will lead to me making a RADIOORPHANGE Yahoo page.
9) Alan, please add any tips you are aware of for loading pictures to the Yahoo site, and of course correct any misstatements I've made here.
Thank you,
Bruce

Hi Bruce -

Thanks to you and everyone for organizing a great event - thoroughly enjoyed it.

I just uploaded my photos (two albums - one for the swap meet and one for the auction) to the group site. The albums claim there are no photos, but I assume it's a matter of the moderator approving the photos.

Best,
John

Paul, I can't find any current production. There are some NOS ones on eBay, and like Tom mentioned, getting one from a parts set is a good option.
In my opinion, what you do depends on how many you need and how much of a factor authenticity is. If having the original style power cord is not important, you can do away with the connector altogether. I have dissected these before and attached a new cord to the old connector, but it's a little tricky. Brown RTV silicone is available for molding.
If color isn't important, I have some of the red cheater cords if you'd like one.

I wrote about this place in Hebron outside Plymouth, NH last year on this site as the biggest hoard of electronics I had ever seen in one place.
I stopped up to see Steve Kidder last week to buy the last of his tubes, and there are plenty of radios, ham equipment, parts, books, magazines, wire, early speakers, and salvage sets still available.
Steve isn't looking to get rich, and is very reasonable to deal with.
I'd suggest you take a ride up before the snow flies.
You can contact Steve at snkidder@roadrunner.com

Paul, I thought I had one, but, no. The set is common, so you could wait in search for a donor chassis. When faced with this situation, I've had no problems substituting transformers from similar sets (same number of tubes) and even universal power transformers. The one difficulty with your set is that the power transformer had a secondary winding for the tuner motor. If taking the route of substitution, you may need an additional transformer for the motor. The multi-section resistor that burned up is something you could make with discrete resistors. The Riders manual has a good pictorial of the original one. I've had to go that route before due to a burned out section or out of tolerance portion.
Let me know if you need help with this.

Hi Paul. I saw your pictures and noticed a problem - the field coil and hum-bucking coil appear to be totally missing. I compared your pictures with others I found online. I'm curious if a previous repair was made and the coil was bypassed in your set (which would result in very low volume). Did you get the other speaker? Let me know how you are progressing with this project.
Best Regards,
Howard.

Hi Howard no problem with volume that was great I was trying to finish cleaning the minor rust off the chassis I went to remove the speaker I moved it just right and the field coil wires fell out I tried to fish them out and no luck I thought I had another coil that would work so I removed the coil that idea did not work either when I looked at the old coil I noticed it was black like it was burnt I just received my new speaker yesterday but I am busy at work it wont be till later in the week and I will try it I will let you know paul

Hi Folks:

Seeking an excellent condition polished restoration as close to factory as possible. Will be attending the Westford NEARC meet in February. I pay cash. There are certain things that I will never acquire on ebay and this is one due to various issues and prices for some that really need help and have a quote that is in the restored territory. I have been actively seeking the "right one" for over a year. Working cartridge appreciated especially 78. All my acquisitions are preferred to contain:

All original: Dial, Escutcheon , Knobs, Speaker (mandatory - reconed fine but not first preference) and at least one original factory sticker.

Best and thanks:

Ian M. Gordon

I just listed a radio for a lady, and wanted to imbed the photo in the listing, but saw no way to do it.
So I put it in the Photos gallery.
How do I inbed the picture in the listing the next time.(like Ian recently did with the Zenith Cobra)
Thanks,
Bruce

Hi Bruce -

You should be able to use the attach files icon (the one in the shape of a paper clip) to add photos to an yahoo email.

Regards,
John

From: ianmgordon444@...
Topic: 357 Message: 357

When I look at post-war models, I notice that the speaker assembly has many holes in it. This reminds me of an audiophile word "spiderweb" in the speaker design or the enclosure used to carry it. I wonder in the case of Zenith from post war into the early 60's, if that design was on purpose? And whether it had an effect on the most impressive sound they make.

Hi Ian,
This is a copy of my response from the ARF.
To a degree the frame can have an effect. The frame holds all the important pieces together and it needs to be rigid enough to properly support the suspension without having a negative impact on the sound quality (too weak and the frame will flex to much). My feeling is the speaker frame designs were done to create the strongest frame with the least amount of cost. This is a very simple explanation. If you do a Google search on how speaker frames effect sound quality you will get many hits. This is one:
http://www.centerpointaudio.com/howspeakerswork.aspx
The speaker box or enclosures on modern speakers have a greater effect on sound. This is similar to radios like the RCA R-77 or R-78 with the enclosures built into the cabinet to improve sound. Some people believed this was just a sales pitch, but when I restored my R-77, there was a noticable difference when the speaker was mounted in the cabinet.

When I look at post-war models,
I notice that the speaker assembly has many holes in it.
This reminds me of an audiophile word "spiderweb"
in the speaker design or the enclosure used to carry it. I
wonder in the case of Zenith from post war into the early
60's, if that design was on purpose? And whether it had
an effect on the most impressive sound they make.

360. Na-Ald hand decorated cone speaker (ship design).Springfield, MA

Yahoo group: NEARC_Radio
Date: 2015-01-24 15:48:36 UTC
From: radioorphanage@...
Topic: 360 Message: 360

Can anyone supply Mt. Onweller with any information about this New England made Cone Speaker?

Hello Mr. Phillips:

My name is Bruce Onweller from Haslett, Michigan and I started collecting 1920s speakers, cone and horn, about 3 years ago.

Recently I purchased a Na-Ald hand decorated cone speaker (ship design).

An ad for the speaker appears in "Classis Cones", by Buford and Jane Chidester, page 54.

No pictures of said speaker.

I contacted Mr. Chidester and he said the speaker is pretty rare and not much information on it.

I have contacted the Massachusetts State Library and have not heard from them yet.

The company that built this speaker is: Alan-Napier Manufacturing Co.

52 Willow St.

Springfield, Mass.

I am looking for any and all information you might be able to supply(?).

Ads, articles, pictures, etc., especially on above mentioned speaker.

I hope you can help.

Thank you-

Bruce Onweller

Here are three radio cabinets I have to get rid of and I'd really hate for them to wind up in the dump. You can use them to practice your refinishing technique, for genuine period veneer that can be used for repairs, A housing for your ham radio, fishtank, whatever your imagination can dream up!

Unless I hear from someone they will be going to the dump next weekend so give me a call at 978-766-0558 to arrange to pick them up.

Alan

Alan, if no one takes them, you should at least reclaim the grille cloth from the philco and the GE. I think the topic of old console cabinets is worthy of an article: so many beautiful pieces of furniture, so little room to keep them. ;)

William,

Thank you for Bill's address...

FYI: This is an internal loop and does not look "nice" like a tabletop or floor loop. The dimensions are somewhat critical and a certain amount of mechanical hardware is needed to suspend the loop and allow rotation.

Sadly, I could make the loop but I do not have woodworking machinery to do a good job. Alas, my "workshop" for what little wood projects I have is but an unheated 10' x 12' shed.

Note too, the inductance of the loop has to fall within the range of the trimmer capacitor controlled by a knob on the front of the radio. Thats why it is best to get an original, a lot of details could go wrong prevent proper operation.

This old Zenith has become an Albatross but plays great music and has a good looking cabinet with an original finish.

Chas

From: k1wgn@...
Topic: 390 Message: 390

One word - Parkinsons. Like many of us I've been collecting and salting stuff away for about sixty years (I'm 70). Just about everything has to go. I'm pretty well overwhelmed and I could use some help making sure it ends up in the right hands. I will post some pictures to this group site once I figure out how to do that. I'd like to get fair, reasonable prices but it's not about the money.

1. ARRL handbooks, all years of the small format, 1926 (the reprint) thru 1978; plus scattered subsequent years in the large format. Other radio related books
2. Hammarlund collection; Hi-Q battery set, HQ-129X, HQ-140, HQ-150, SP-200, BC-1004 with orig. PS nicely restored, several BC-xxx parts sets and PS's. Manuals and other paper.
3. GPR-90-RX with manual (the RX has several switch selectable fixed frequency channels)
4. Extensive early Heathkit collection; receivers (including K-2 & AR-1), some ham equip. (no xmitters), test equipment including V-3 mockup. Some audio equipment including the chair side enclosure with FM-3, AM-2, WM-4, WA-P2 and changer. Two file drawers of manuals and other paper. And more!
5. Nicely made homebrew six meter 250 Watt amplifier, two meter 250 Watt amplifier, common PS & meter panel with rack cabinet. Similar units under construction for 1.25 meters and 70 cm and spare 4CX-250's included.
6. H.H. Scott shipboard entertainment receiver model CZC-46209 from WW-2 era.
Etc., etc., etc.

What an incredible radio! I was reminded of this at NEARC's recent show in Westford this month. Saw a beautiful black example which I would have bought had I not liked the green more. I will pay well but rationally for a no-nonsense restored example. As always original knobs, dial system, speaker and factory sticker preferred.

I have a 11 inch speaker that mounts on a bracket below the magnet (that is, it doesn't hang from the edge of the speaker basket), which I think might've come from a Philco. It's got a 4-pin paddle sort of connector on the end of a cable for the electrical connection. How can I identify the speaker you need?

Charles, have you gotten any leads for this? I'm curious if you're concerned about authenticity or if functionality is the only goal. I've adapted various loop antennas to other sets and experimented with adding or removing windings with moderate success. On the other hand, if someone who has an original antenna takes some accurate measurements, it looks like it would be easy to reproduce.

From: pacquerat@...
Topic: 379 Message: 396

Howard,

Yes I could cobble something together and experiment. I would prefer to get an original loop assembly, meaning all the support hardware, brackets, etc. Failing that option, accurate sketches that I could build from would give me a better chance at achieving the correct Mh as well as have the proper turning function. In either case, I will offer $$$ as it does take time to make accurate measurements as much as carefully removing a loop assembly from a derelict cabinet.

Thanks!

Chas

Hello,

There are two fellows interested in two items and I will be bring those items to the Brookline Meet, April 25. I will have lots of room if anyone is interested in other items.

Additional items (see also original message from 21 Feb. 2015, below):
7. Telewave model 44A Wattmeter, 20 mHz to 1,000 mHz. “N” connectors, Ranges 5, 15, 50, 150 and 500 Watts, forward and reflected. With case and manual. Very good to excellent condition. Same size and ruggedness as a Bird Wattmeter but no slugs are required.
8. Bird 50 ohm, 500 Watt dummy load, model 82A, good condition.
9. Hallicrafters S-47 entertainment receiver, AM and FM bands plus three SW bands covering 5.8 to 18 mHz. Similar circuitry and cabinet to SX-42 and SX-62. Good condition except needs recapping.
10. Hallicrafters T-54 television with channel 1. Metal cabinet like SX-42 and SX-62. I had it working several years ago but probably will need recapping.
National 10-1A, 1 to 11 meter coverage. Good physical condition, operating condition unknown. With all tubes including two acorn tubes. No power supply.
Several boxes of early battery set parts.

I’ll try to post some photographs.

If anyone would like to see stuff (there is more) please contact me to set up a time.

Steve, I would be interested in the HEathkit audio gear, especially the FM tuner and amplifier. if it's all in a chairside config, that is ok too. Thanks,

411. Wanted at Brookline April 25

Yahoo group: NEARC_Radio
Date: 2015-04-16 10:12:27 UTC
From: radioorphanage@...
Topic: 411 Message: 411

I am looking to buy the following items at Brookline on April 25- working or nonworking:
1) Catalin Radios- perfect, broken, parts, etc.
2) Tube Amplifiers -Stereo or Mono
3) Zenith Wooden Radios- Tabletop or Tombstone
4) A Zenith Guardian Ear - the ugly brother of the Radio Nurse
Email, call me in advance, or see me at Tables 41 & 42 at the show.
Thank you,
Bruce Phillips

I am beginning to "thin out" some of my sets and I have a FREE (yes free!!) Philco "Miss America" TV that I will be bringing to the Brookline meet on April 25. It is complete including the back and knobs but not restored and is in unknown electrical condition. The cabinet is in very good condition - please see the attached photo.

I live in Nashua, NH so if you're interested you can pick it up from my garage instead of waiting for the meet.

First come, first served!

Hello All!
I'm looking forward to seeing everyone and all the goodies in Brookline. I'm looking for just about everything listed on the NEARC site, but there are a few specific items:
1. I need the female power plug that fits the Navy LM series frequency meters. Picture of the male end is attached.

2. Looking for information and the mechanical parts that change the channel of the zenith "porthole" television sets using the Lazy Bones remote.
3. Not exactly a radio item, but if you have the Trico vacuum wiper motor part with the leather seal, I'm interested.
See you there!
Howard

Norway to Become First Country to Switch Off FM Radio in 2017

Hollywood Reporter

Steely Dan, the jazz-rockers who scored a hit in 1978 with their single "FM (No Static At All)," would not be pleased.

In what will likely be the opening move in a global transition to digital radio, Norway has announced it will shut down its FM band. Norway will start turning off FM radio on Jan. 11, 2017, and plans to stop transmission of the last FM signal to the country's northernmost regions by Dec. 13 of that year.

The announcement <https://www.regjeringen.no/en/aktuelt/radio-digitisation-in-2017/id2406145/>, made by their Ministry of Culture, makes Norway the first country to do away entirely with FM radio. The move is intended to save money and allow a full transition to digital radio, which Norway argues will give listeners "access to more diverse and pluralistic radio content and enjoy better sound quality and new functionality."

In its statement, the Norwegian government said the cost of transmitting national radio channels through the FM network is eight times higher than via the Digital Audio Broadcasting (DAB) system, the standard digital radio technology used across Europe. By shutting off FM, Norway's national radio channels will save more than $25 million a year, according to official figures "releasing funds for investment in radio content," argued Minister of Culture *Thorhild Widvey*.

"This is an important day for everyone who loves radio," said *Thor Gjermund Eriksen*, head of public broadcasting network NRK, in a statement. "The minister's decision allows us to concentrate our resources even more upon what is most important, namely to create high-quality and diverse radio content to our listeners."

The DAB system in Norway already offers 22 national channels, compared to just five on the FM band, and has the capacity for 20 more. A recent survey by TNS Gallup found that 55 percent of Norwegian households have at least one DAB-equipped radio.

Norway has long been a digital radio pioneer. NRK launched the world's first DAB channel on June 1, 1995. Other Scandinavian countries as well as the U.K. are thought to be considering an FM switch-off by 2022. The digital rollout in other European countries has been slower, with old FM radio still proving more popular in several territories.

Once AM and FM analog get turned off, what is to become of our collections? I have my own FM transmitter that I use to retransmit Sirius XM signals around my house/property so I can tune in hits of the 40's, 50's, etc on my old radios, but did not think regular broadcasts would get turned off starting so soon, but it happened to TV, so I guess it makes sense.

Norway Will Be the First Country to Shut Down Analog FM Radio - Bloomberg Business or http://www.bloomberg.com/news/articles/2015-04-20/norway-to-turn-off-analog-fm-radio-in-sign-of-global-shift Joe Devonshire In a message dated 4/21/2015 10:57:52 A.M. Eastern Daylight Time, NEARC_Radio@yahoogroups.com writes: Norway to Become First Country to Switch Off FM Radio in 2017 Hollywood Reporter Steely Dan, the jazz-rockers who scored a hit in 1978 with their single "FM (No Static At All)," would not be pleased. In what will likely be the opening move in a global transition to digital radio, Norway has announced it will shut down its FM band. Norway will start turning off FM radio on Jan. 11, 2017, and plans to stop transmission of the last FM signal to the country's northernmost regions by Dec. 13 of that year. The announcement, made by their Ministry of Culture, makes Norway the first country to do away entirely with FM radio. The move is intended to save money and allow a full transition to digital radio, which Norway argues will give listeners "access to more diverse and pluralistic radio content and enjoy better sound quality and new functionality." In its statement, the Norwegian government said the cost of transmitting national radio channels through the FM network is eight times higher than via the Digital Audio Broadcasting (DAB) system, the standard digital radio technology used across Europe. By shutting off FM, Norway's national radio channels will save more than $25 million a year, according to official figures "releasing funds for investment in radio content," argued Minister of Culture Thorhild Widvey. "This is an important day for everyone who loves radio," said Thor Gjermund Eriksen, head of public broadcasting network NRK, in a statement. "The minister's decision allows us to concentrate our resources even more upon what is most important, namely to create high-quality and diverse radio content to our listeners." The DAB system in Norway already offers 22 national channels, compared to just five on the FM band, and has the capacity for 20 more. A recent survey by TNS Gallup found that 55 percent of Norwegian households have at least one DAB-equipped radio. Norway has long been a digital radio pioneer. NRK launched the world's first DAB channel on June 1, 1995. Other Scandinavian countries as well as the U.K. are thought to be considering an FM switch-off by 2022. The digital rollout in other European countries has been slower, with old FM radio still proving more popular in several territories. Once AM and FM analog get turned off, what is to become of our collections? I have my own FM transmitter that I use to retransmit Sirius XM signals around my house/property so I can tune in hits of the 40's, 50's, etc on my old radios, but did not think regular broadcasts would get turned off starting so soon, but it happened to TV, so I guess it makes sense. FYI. Its primarily Norway which only has 22 FMs. And serious line of sight issues. They've been moving away from analog FM for awhile. Have a smaller generally more affluent population .. So digital works for them. We on the other hand have several thousand FMs from low power metro FMs to class C. So from a business standpoint, nothings gonna change here for a while.

430. I'll assume you, FM (and AM) is not dead

Yahoo group: NEARC_Radio

From: Radioorphanage
Topic: 430 Message: 430

Thanks Dave.
This is just another typical example of how News works in the world today.
Agreed, FM may not be the proper thing for Norway, and never was. But that has little to nothing to do with the USA.
If there is a buck to be made in it, it will be here. Start to worry when the major cable companies start gobbling up the FM stations.
About 10 years ago, in a conversation with my son, the concern he stated was that by the time he was older, there would be no AM radio stations to listen to these old AM only sets we all collect.
Some quick research at that time showed that there were still about as many AM stations in the USA as there ever was at any time.
I’m sure with your background, you have better knowledge than I.
I think radio- AM and FM is here for the foreseeable future.
Bruce

Hello to all,

Just a quick note to let you know that we will have plenty of vacuum tubes available for sale at Brookline including many of the "2-number" types. Many have been tested.

If you are looking for something special, let us know and we will try to have it there.

73,

Gene K1NR

Hi everyone:

At Brookline I have an interest in meeting someone who owns a restored version of RCA New Orthophonic 7- HF-5 and the Zenith Cobramatic H-664. Those two record players are my most wanted. Drop me a line if you can or bring them to the show. My interest is for demo and possible purchase now or later.

Best:

Topic: 435 Message: 435

What all the fuss is about.

Visited a mentor and friend's curated collection recently and heard what I had heard are two of the best radio's of the entire era. The statement true. They are the 2nd version of the Philco 16B and the 37-690.

The 16B. My goodness what a rich powerful sound. It is just about everything in a table radio. The output power and sound quality puts others to shame and more importantly, the speaker, almost too big for the cabinet, practically blew me out of the front due to it's output capability. The fit, finish and chassis engineering never ceases to impress. It is also one of the most beautiful that I have studied. That radio is very elusive. And when they do surface on ebay, they are either overpriced, refinished wrong and questionable in terms of technical maintenance.

The 37-690 is a masterwork. I have operated and worked with audio and radio gear for the 25+ years of my career and I was not prepared to hear one of the best AM receivers of any time. Frequency response and bandwidth spread as good or better than any pro monitor made today for AM. The output power is so strong that you can put the thing in a club, play songs with your transmitter and be none worse the wear. They thought of everything with the tweeters and acoustic clarifiers and the chassis is fascinating. As I sat in front of it listening to Dawn Upshaw and big bands I turned to my friend and said that this radio moves out of the realm of the consumer and into the professional. His response was that this product almost killed the company. The consoles that came later, although sounding excellent in a different frequency balance, doesn't approach the bandwidth of this at least from my exposure thus far. Owning both is a microcosm of the era. My search for both continues.

Hi folks,

At this point the following are promised and I'll be bringing them to Brookline:
GPR-90-RX with manual (Item 3 above)
Hallicrafters S-47 entertainment receiver with manual (Item 7 above)
Heathkit AR-1 receiver with manual and AR-2 parts chassis
Heathkit SG-7 signal generator with manual

There is interest in the Heathkit chair side enclosure with FM-3, AM-2, WM-4, WA-P2 and changer. I'll be bringing that as well with manuals.

I'll bring the Hi-Q battery set, HQ-129X, HQ-140 and HQ-150 of the Hammarlund collection.

Also the National 10-1A with manual, no power supply.

If anyone is interested in other items please let me know so I can bring them also either to Brookline or Deerfield (Friday, May 1st and Saturday, May 2nd). And please feel free to call me (numbers below) to set up a meeting at either show or later at my place in Paxton, MA.

The same regulator the PS-1 uses, but without the heater PS

PS-2 Solo
Item# PS-2 Reg Kit
$39.00
Heat Sink Height:
Availability: Usually ships the next business day
This item is currently out of stock!

Product Description
No doubt that this little circuit board (4.5 by 4.25 inches) will make life quite a bit easier for many tube fanciers.

On this extra thick (0.094 inch), US-made PCB with 2oz-copper traces resides a single high-voltage regulator, with its own raw power supply, including the rectifiers and power-supply reservoir capacitors. In other words, except for the power transformers, the PS-2 Solo PCB holds all that is needed to make a superb tube B+ power supply. The PS-2 Solo regulator can power a line-stage amplifier, headphone amplifier, or phono stage. (It might also work in a tube power amplifier, if the current draw isn't excessive.) This high-voltage regulator uses a high-voltage series regulator to achieve a quiet and stable regulated B+ voltage, which can span from 50V to 300V, while delivering up to 80mA of current.

Furthermore, both a full-wave-center-tapped configuration and a full-wave-bridge rectifier arrangement can be used with this PCB. The PS-2 Solo PCB, like the Janus Solo PCB, holds only a single high voltage regulator, unlike the original PS-1 regulator PCB which held both high voltage and low-voltage regulators. Thus, the tube heaters must find their power source elsewhere, such as an AC winding or a simple DC power supply or regulator power supply.

The PS-2 Solo kit comes with all the parts needed to populate the PCB, including the heat sink, standoffs, and 14 voltage-setting resistors, which allows the following output voltages to be set:

50V 60V 65V 75V 110V 120V 125V 130V 135V 140V 150V 160V 165V 170V 175V 180V 185V 195V 200V 210V 215V 220V 225V 240V 250V 270V 300V

All the resistors needed

All the capacitors needed (Nichicon, Panasonic, RTI or Wima)

LD1085 low-dropout voltage regulator

Heatsinks for TO220 device

Four sets of PCB standoffs with O-rings

Four HER108 ultrafast 1A 1000V rectifiers

IXCP 10M45S HV constant-current source

24-Page User Guide

Subject: [NEARC_Radio] CIE booklets from Brookline

Someone bought some Cleveland Institute of Electronics booklets from me at today's show and asked me to hold them for pickup at the end of the show. I didn't get his name as his name-tag was hidden beneath a blue jacket. Somehow we failed to connect at the end of the show. If you are the person to whom I owe the booklets, please contact me and I will arrange to get them to you.

Best regards,
-Steve

It wasn't me! I may have a "Radio Problem", but with my particular infection, I ended up with a pickup truck large enough for several consoles AND the car seat. This leads to its own problems with the Mrs, but that's a different story.

Alan, with the blond daughter

445. Tubes at Deerfield

Yahoo group: NEARC_Radio
Date: 2015-04-29 03:06:44 UTC
From: eugeneb@...
Topic: 445 Message: 445

All,

We will have plenty of vacuum tubes at the BIG Deerfield (NH) NEARfest May 1 & 2.

Many have been tested on a TV-7D/U tester.

We will be located just around the corner from the green John Deere building at the main entrance.

Look for the classic Land Rover.

See you there.

73,

G. Balinski K1NR
NEARC member

PS, In case you are not familiar, NEARfest is the LARGEST ham radio flea market in New England.
it is mainly outdoors with some vendors indoors.

Gates open 9:00 AM Friday and do not close until 2:00 PM Saturday. Don't be late : -)

More info at http://www.near-fest.com:8084/nearfest/
http://www.near-fest.com:8084/nearfest/

475. Long Term NEARC Member Bob Andersen Pasted away April 19th, 2015

Yahoo group: NEARC_Radio
Date: 2015-05-17 22:26:37 UTC
From: radioorphanage@...
Topic: 475 Message: 475

I heard from Bob's Life Partner Kathy over the weekend that he passed away April 19th.
Bob was a true "Radio Character". He held the position of NEARC Membership Secretary from 1997 to 2004.
With about 400 members, sometimes it is difficult for members to put a face with a name. Bob is the person standing between me and Mark Nelson on the cover of the last RADIO NEWS from the picture taken at RADIO XLVI.
A Moment of Silence,
Bruce Phillips
President NEARC

476. Many Radios available in Ayer, MA tomorrow Monday 5/18 @1:00pm

Yahoo group: NEARC_Radio
Date: 2015-05-17 22:35:46 UTC
From: radioorphanage@...
Topic: 476 Message: 476

The previous posting told about Bob Andersen passing away.
Tomorrow at 1:00 pm Bob's Life Partner Kathy will be selling many radios Bob had in storage at Ayer Moving & Storage on 109 Central Ave., Ayer, MA. I don't have great details, but she tells me she is not looking for a lot of money, she just doesn't want them to go to 1-800-Junkman. She stated there were 18 consoles, but I don't know what they are, or what else is there. I can not make it there. If you're looking for a bargain, and you have room, be there.
If I can get some more details, I'll post them.
Bruce Phillips
President NEARC

Subject: [NEARC_Radio] Long Term NEARC Member Bob Andersen Pasted away April 19th, 2015

I heard from Bob's Life Partner Kathy over the weekend that he passed away April 19th.

Bob was a true "Radio Character". He held the position of NEARC Membership Secretary from 1997 to 2004.

With about 400 members, sometimes it is difficult for members to put a face with a name. Bob is the person standing between me and Mark Nelson on the cover of the last RADIO NEWS from the picture taken at RADIO XLVI.

A Moment of Silence,

Bruce Phillips

President NEARC

480. Help request to identify a Radio

Yahoo group: NEARC_Radio
Date: 2015-05-19 23:59:23 UTC
From: TrainBee@...
Topic: 480 Message: 480

I'm trying to find some information, schematic if possible, for a Knight Tombstone Radio. So far, I found color photo evidence of the radio at the Allied Radio site http://www.alliedcatalogs.com/catalogs/1936/ on page 118, but that's about it. I do know that Knight was a name used by Allied Radio and possibly built by Pacific Radio. I also found a related chassis that appears to be similar in a photo. The label in the cabinet was damaged, so any information from that is useless. I cannot find anything in Riders or Beitman's.

Here is what I know,
Name on Dial - Knight
Tubes (5) 80, 75, 42, 6D6, 6A7.
Bands: 3
Serial: 25-7008
Model from internet source: H9801
Possible related model: 9701H
Manufactured year: 1936

The Allied Radio site doesn't all copying or printing. At least you can see what I am talking about. Does anyone have any more information on this radio?

Thanks in advance.
Joe Devonshire

Joe, you may have a Continental Radio model X-8 chassis. This chassis was used in Admiral, Aircastle, Mantola, and other sets from 1935 to 1939. Check to see if the picture here http://www.magiceyetubes.com/tmp/X8_pic.jpg matches your chassis layout and if so, the schematic is here http://www.magiceyetubes.com/tmp/X8_sch.jpg. Good luck and let us know!

Howard,

The chassis layout is somewhat reversed. Let me get into it to see if
the schematic is close.

Thanks for something to check out.

Joe

From: TrainBee@...
Topic: 484 Message: 484
Attachments: 4 described; binary payloads are missing from this source WARC

I hope this doesn't overload the server.

Here are some photos of the radio I have. It is neither a 80AC or A9775. Someone before me did a recap on this radio, but they didn't get it to play. I found this at a rummage sale. I have to check the tubes but as you all know, that's only part of getting it to work.

Here are photo's from the rear and overhead of the chassis.

6D6 - 6A7 - 75 - 42 - 80

I'm trying to find some information, schematic if possible, for a Knight Tombstone Radio. So far, I found color photo evidence of the radio at the Allied Radio site http://www.alliedcatalogs.com/catalogs/1936/ on page 118, but that's about it. Thanks Aaron,

BINGO!!! What a find. Between the two, I think these will get me there. Now, all I have to do is to trace the wiring against the schematic(s). I do notice the tone control on the 321-37. My radio doesn't have this. When I get the time to follow the wiring, I'll let you know so we can match the radio to the schematic.

Thanks again.
Joe

I have a PDF file of Riders and I didn't find the scheme either, but it may be hidden out of order. It should have come up with _www.nostalgiaair.org_ (http://www.nostalgiaair.org/) .

TrainBee@... (mailto:TrainBee@...) wrote:
Thanks Aaron,

I seem to keep hitting the wall. I found the listing for 321-36 in the Rider Index. The problem is that in neither my CD set or the on-line version can I find any Pacific Radio listing in the Schematic book. In your reference material, do you have it? >From what I'm seeing, and posts from a few others, I don't expect to find much more than a schematic. BTW... I did a search on my references to see if I missed it. No luck there. No Pacific.

Thanks,
Joe

Joe

Check out the schematic for a Pacific Radio, model 321-36. It's Rider 8-9. According to a radio directory I have, 25 preceding the serial number means it was manufactured by the Pacific Radio Corp. It's location is listed as Los Angeles and Chicago, so I don't know if it's the same company or

two separate ones.

Hi folks,
I am looking for some Atwater Kent hardware.

For my 10, one knurled nut for a battery connection. And one screw that secures the bakelite top of the TA to the can.
For my Model M horn, one knurled nut that attaches the bell to the neck.
For my 35, a screw and nut pair that holds the bottom plate to the case.

Thanks!

Russ

Russ,
Do you have an "OLD" hardware store near you or that you know of.
When I was living in NJ, there was a hardware store in Lambertville, "Finkles"
that I could always seem to count on. Black screws, slotted brass, etc...
That stuff was burried somewhere, but they could always seem to find it.
Knurled nuts should be fairly easy to locate. The downside is that it
won't be an exact match. I'd get a few so they all match and keep the original
with the radio for reference. I've even found some good old hardware in a
repurposed barn indoor antique store here in Maine. The one's I know of in
Maine are in Whitefield and Searsport. I'm sure there are others.

Just some thoughts.
Joe

Hi Joe, not a bad idea, so many of the old hardware stores that had "stuff" are gone now but there are still some of the old ones around. I have one modern knurled nut on the 10 now, so I need to find one with the correct style and patina to replace it. I am sure that I will find one eventually.

493. Radio Training at Fall Brookline- Can you help?

Yahoo group: NEARC_Radio
Date: 2015-05-26 19:23:17 UTC
From: radioorphanage@...
Topic: 493 Message: 493

Radio Training at Fall Brookline
I spoke with Ross Hochstrasser last week about Radio Training. Between my vision, his reality check, and information we both had, I think we have the basis of NEARC's Fall Brookline Training.
I'll start out by saying, "I was thinking BIG", and wanted to do everything all at once- a number of times in one day, but Ross tapered me back by reminding me that we can do this again next year and the year after…..
We have no idea how many people will be interested and show up, or stay for more than one training session on September 26th.
Ross and I think that a maximum of 4 training sessions at one time, and to do only two sets for our September Event.
That means that we will offer 4 topics at 12:00pm, and the same 4 topics at 1:00pm, expecting to be out of BEC by about 2:00pm for the September 26th Event.
We assume each topic will be about 30-35 minutes with 15-20 minutes available for questions, and a short break before the second session.
Topics that had been brought up:
1) Basic Antique Radio – What to watch for- What to watch out for (should I buy that radio?)
2) Basic Capacitor Replacement
3) What to do next when you've changed out the caps and it still doesn't work
4) Resistance line cord replacement
5) Selling on eBay
6) Cabinet Repair and Refinishing
7) How tuning eyes operate
8) Enigma
9) History of a particular radio Company (Philco, RCA, Zenith, etc.)
Currently, Ross and I believe that topics 1-4 should be where we concentrate in September, as that is what we think we may be able to cover with a little additional help.
I'd like to believe each topic would have a Presenter and a Supporter. This is where we currently stand:
1) Basic Antique Radio – What to watch for- What to watch out for (should I buy that radio?): Presenter- Bruce Phillips Supporter ?
2) Basic Capacitor Replacement: Presenter ? Supporter ?
3) What to do next when you've changed out the caps and it still doesn't work: Presenter- Ross Hochstrasser Supporter ?
4) Resistance line cord replacement: Presenter- Tom Scarpelli Supporter?
As you can see, Ross, Tom, and I can handle topics 1,3,and 4, but we have a problem with topic 2, and would like backup Supporters for all 4 topics.
Ross and I would appreciate the input of the NEARC Yahoo Group Members on letting us know if this is the right "Size & Scope" for September, and particularly any ideas you have to fill the 5 open spaces.
Please respond in the next 2 weeks with ideas and suggestions. We'd like to lock this down by June 26th, so we can publish information on our website 3 months in advance of the show.
Thank you,
Bruce Phillips

President NEARC

500. Radios, TV's, Test Equipment, Tubes for sale....

Yahoo group: NEARC_Radio
Date: 2015-06-02 00:40:33 UTC
From: rtalfa@...
Topic: 500 Message: 500

I had the opportunity to visit a couple of very nice people that have a bunch of radio stuff that they are trying to get rid of. The husband had a brain aneurysm some years ago, and no longer works on or collects radios.
They are trying to take back some of the space that the radios take up. There are some restored radios upstairs that are not for sale, but what is downstairs is for sale (nothing restored down there). Here are some of the things that I can remember;

Radiola 33 with legs. The chassis is somewhere perhaps on the floor near it.
TEK Scope (I did not get the model)
B & K Precission Tube Tester
2 Very big boxes of tubes, mostly TV I expect.
A Predicta TV, missing bezel around tube
Numerous console models
Chassis with no cabinet
Cabinets with no chassis
A 20's homebrew, with 2 headphones inside
Numerous odds and ends, resistors, transformers, more tubes than noted above, escutcheons etc....

There is more than this, but it highlights what I can remember.

Their main interest is that everything goes to a good home. Wife is Laurie, husband is Tim. They can be reached by phone or email.
Contact Laurie at 978 374 5504 or LAL2LLB@comcast.net

Greetings, All!

I received a message on our NEARC Facebook page from a Gene Giddings from Fayette, Maine who has a Motorola 2-Way Radio that is free to anyone would like to pick it up. His message follows:

Gentlemen. I have an old Motorola 2 Way radio that I am trying to give away for free. It was given to me and I have no use for it. It is in very good condition. The guy who gave it to me said it was working not all that long ago but I have no way to prove that. I am sure it would need some tinkering. If you or anyone you know might be interested in this unit, please contact me. It is here in Maine so I would prefer local pickup as it is quite big and heavy. AS I said..... IT IS FREE!! Thank You in advance. Gene in Fayette, Maine

I asked for his email address so that any one of you can reach out to him directly. His response follows:

Aa1xd@yahoo.com. I really hate to see this go on the junk pile. Hope you can help with finding a home for it. Tks

Finally I've attached photos that he posted in the FB message.

Thanks and good luck!

John Gibbons

Hi Barry,

The speaker is made by Magnavox and goes into a Crosley Model 168. See attached photo.

Al,

If your looking for the adapter plug for a Radiola II, it is a flat rectangular device that fits under a storage clip in the radios cover. That type is scarce. I have a number of conventional round adapters with a large body. There are large screws and grooves to accept the phone pins, some have a ring to tie the headphone braid tail to, most are Switchcraft. Send me an email if this works for you.

Regards,

Chas in S. Dartmouth

Hello all,

The message below speaks for itself.

Regards,
Joe Devonshire

In a message dated 7/21/2015 8:58:00 P.M. Eastern Daylight Time,
kc2fiq@... writes:

On Tuesday, July 21, 2015 8:28 PM, "kmx888@... [heathkit]"
<heathkit@yahoogroups.com> wrote:

I contacted the author of The book will be released in mid October as a
free eBook. "Heathkit a Guide to the Amateur Radio Products" to see if he had
any plans for republishing it. (Used ones are about $90 plus on Amazon)
I got the rather pleasant reply below. Looks like he is doing a very nice
thing for Heathkit collectors.

Rather than the "traditional" Kindle or Nook kind of eBook, I have chosen
to go a step further by making the book accessible through a free app
called Evernote. Evernote runs on all desktop, laptop and mobile platforms
including Windows, OS, iOS, Android and even Blackberry. Install the book on
your smartphone and you'll always have it with you for quick reference at
hamfests or while browsing eBay.

No special hardware is required. If you have a desktop or laptop computer,
or a smartphone, you are good to go. The book will include attached files
like PDFs. It can also include links to resources on the web. And the book
is completely searchable. But the most remarkable advantage of using
Evernote is that it makes the book dynamic--whenever I make changes or additions
to the book, those changes and additions show up in your copy instantly.

The book has been updated significantly from the printed version. Whenever
possible, entries contain multiple color photos of equipment. Some entries
also include interior shots, and eventually all of them will. I say
"eventually" because taking something like a TX-1 out of its case is not a task
to be taken lightly.

You can pinch and zoom on photos to get a closer view.

Tube listings for equipment contain links to online tube data sheets.
Click or tap on the tube in question and off you go.

Most entries also include a hi-res PDF schematic. Eventually all will. You
can view these schematics on your mobile device (pinch and zoom for a
closer look) or you can drag the file to your desktop for viewing on a larger
screen. You can also print the PDF or email a copy to a friend. I've got all

the copyright issues covered

Kevin
KD0ILM/XV2KM.

The Cambridge Public Library had a small exhibit on the history of manufacturing in Cambridge, a couple months ago. I checked their webpage, wondering if I could find out who prepared that exhibit, as they might be someone you could contact.

I did not find that, but was able to search some early 20th century Cambridge newspapers, and found an article that may point you in the right direction. A Mr J.A.S Woodrow may have started a cottage radio manufacturing business a few years after this article. (Woodrow shows up frequently in the searches, in various contexts, so perhaps we should not be surprised when the article notes that, "he has been in the drug business at the corner of Broadway and Prospect street for many years") Here's the article:

Cambridge Chronicle 8 September 1917

RADIO SCHOOL TO OPEN

The Cambridge Radio school organized by J. A. S. Woodrow, of this city, to meet the increased demands for wireless operators caused by the war, will open, Monday, September 17, at 166 Prospect street. The school will prepare for commercial wireless service, the naval radio school and the army signal corps. Pupils will be graduated as soon as they prove themselves competent operators. The usual course is about four months for the day classes and eight months for the evening classes. The school can accommodate about 200. J. A. S. Woodrow, the principal, and one of the Instructors, is a Cambridge man, and has been in the drug business at the corner of Broadway and Prospect street for many years. He was graduated from Harvard in 1908. For the last three months he has been delivering the theory lectures to the U. S. Signal Reserve corps at Cruft laboratory, Harvard. He has also lectured in Boston. Another Instructor, T. Gothrop, former cable superintendent at Newfoundland, has had long experience in signal work. During the summer he was code supervisor to the signal corps at Cruft's. The school will be located In a house owned by Mr. Woodrow, on the corner of Prospect street and Broadway. Tho house is being remodeled and equipped with all the apparatus necessary for a first-class school. Mr. Woodrow has a special permit from the navy yard which allows him to keep the apparatus assembled. Day classes will be held, Monday to Friday, inclusive, from 9 a.m. to 12 m., and from 1 p.m. to 2 p.m. Evening classes will be held on Monday, Wednesday and Friday evenings from 7 to 9 o'clock. Arrangements for special Instructions for Individuals or classes may be made with the faculty. New classes will be formed the first Monday in each month. Anyone who has had a grammar school education is eligible. The school office will open Monday. Anyone wishing Information regarding the school before that time may telephone Cambridge 73463 or 73468.

Is anyone in the group a member of the Collins Collector Group?
I have a pretty rare Collins 32RA transmitter from the WWII period.
It needs restoration, but it appears all there (minus 3 tubes).
It weighs 120 lbs., so I'm not interested in shipping it.
I'd like to see it go to a NEARC Member or Collins collector in New England.
Any help would be appreciated.

540. Free Radiola 86 Console Radio in Barrington,NH

Yahoo group: NEARC_Radio
Date: 2015-08-11 23:37:26 UTC
From: radioorphanage@...

Attachments: 3 described; binary payloads are missing from this source WARC

I received this email the other day. Radiola is 1st come, first served:
Hi Bruce!
Don't know if you remember me. You helped Jim Blanco and me regarding xenon projection lamp at the IOKA in Exeter.
ALSO: my father-in-law had a radio and TV shop in Yonkers, NY starting in the 1930's, and then moved to Westport, CT, retiring in 1970. He died in 1990. Sometime back in the 1990's I gave you a few old radios from his place and you "treated them like your own", taking them to a radio swap meet and selling them for me, then handing the cash in an envelope to me. VERY NICE of you!

Noticed NH Chronicle did a nice story on you!

REASON FOR CONTACTING YOU NOW:

I have a Radiola 86 that I lugged home from Barrington dump about 20yrs ago, with plans of restoring it. In the monstrous old Ryder books saved from father-in-law's shop, I have the complete schematics and allignment data! I never did work on it, and want to get rid of it now. It's in rough shape, but all there except for the tubes. Apparently it was stored in a damp place, and all veneer is off cabinet and cabinet itself is sort of coming apart at the seams. I didn't shine it up for attached pics, but the inside area around record changer was much more preserved from the lousy storage conditions---still shiny varnish and changer, though siezed up motor, is still complete and probably restorable. Missing is the microphone and tone arm weight RCA provided for making recordings. The speaker cone is still intact, and I'll bet the speaker still works....

I just don't have the heart to toss it in the dump again! I remember you avoided consoles because of space at your house, but wonder if there'd be any interest from you or someone you know?????

Craig

Topic: 543 Message: 544

Howie,
You must be workin’ on some “wizbang euro portable” to need tubes like that!!
All my Euro tubes start with E. But, a 1AF4 or 1AJ4 is the US sub for the DF96, a 1AB6 is the sub for DK96, 1AF5 or 1AH5 sub for the DAF96, and a 3C4 subs for the DL96.
These are all relatively common US tube used in portable sets. Hopefully somebody might have these.
Regards,
Bruce

545. WTB: For RCA AR-812 left and right battery doors

Yahoo group: NEARC_Radio
Date: 2015-08-18 13:52:55 UTC
From: pacquerat@...
Topic: 545 Message: 545

Friends,

I need both battery doors for the for RCA AR-812 in fair condition. I understand there were two makers of this cabinet. I need the doors that will accept the alignment pins on the bottom. I do not care if wood is a little chipped. Must have at least one pull knob. Paper directions glued to the backs are not important.

Thanks!

Chas

557. Telefunken 2183 vs 5183

Yahoo group: NEARC_Radio
Date: 2015-08-27 03:46:21 UTC
From: Dick Joltes
Topic: 557 Message: 557

Wisdom of the list...

Few years back I acquired a TFK 2183, but the main board turned out to be bad. Through total serendipity I ended up with a board from a 5183, but with a bad power supply. The schematics seem to indicate the two should be compatible (same voltages off the PS, etc.) but the one issue is that the 2183 supply doesn't use an interlock for the main power connector. And I can't find any reference showing where the AC should go into this thing.

Does anyone happen to have a 2183 and might be able to send me a photo showing where the mains power feeds in?

Best,

Dick Joltes

562. Wanted: Zenith Console from 1942- Prefer 9,10, 12 Tube

Yahoo group: NEARC_Radio
Date: 2015-09-12 02:14:41 UTC
From: radioorphanage@...
Topic: 562 Message: 562

My friend, Craig Hardy- in Barrington, NH is looking for a Zenith Console preferably from 1942. 1942 was the year his wife was born (don't say I told you), and her dad was a Zenith dealer for 40+ years.
He can restore the chassis, but would like the radio complete and in good physical condition.
Something like a 10S669, but he will listen to any offers of strictly Zenith sets from 1940-1942.
He can pick up at Brookline, or will travel up to 100 miles if necessary.
Please send pictures and asking price to Craig at craig.hardy@prodigy.net or call him at (603) 664-2583.
He also has an interesting Stromberg Carlson 1121- eleven tube set for sale or trade.
See the next listing.....

563. 11 Tube Stromberg Carlson 1121 Console for sale or trade

This used to be common, but fell out of use at least 20 years ago. I think (you'll want to check me) that the three-round-pin arrangement is known as an IEC-320 connector. McMaster-Carr seems to have them, though Digi-Key does not. Type SEV1011 into McMaster's search box.

Bruce,

I was in the same position several years ago and after an exhaustive search at Hamfests and other swap meets, I gave up. I carefully enlarged the hole to accommodate a modular outlet. The other option I could have taken was to cut a piece of aluminum to cover the hole, drill a hole in the patch and direct wire it.

Good luck with your search. I can't seem to decide whether or not I like the SB-303 or 300. Maybe it's those glowing tubes in the SB-300.

Regards,
Joe Devonshire

The Heathkit socket isn't the PH-163 "business machine" three-pin oval plug and socket that was used by HP and others. It looks to be a "Japanese calculator" socket, which is rectangular with rounded corners:
<http://www.cs.ubc.ca/~hilpert/e/powerConn/index.html>

Henry, In all honesty I'm rather disappointed with the functionality of the Yahoo! groups interface. It seems rather unpredictable and how it works depends upon your OS and your browser.
If I want to add pictures, I use my Windows desktop computer with a google chrome browser. The iPhone Safari mobile interface doesn't seem to have the ability to attach photos to a message. I can only upload from the iPhone if I create a new album. On the iPad, I can add photos in the Safari browser only if I rotate the iPad to view in portrait orientation, otherwise the paperclip icon is out of view. Running windows XP SP3 32 bit I keep getting stack overflow errors. I haven't tried Windows 10 64 bit IE yet. You may have to play around and find out what works best on your system. I haven't tried to compose an email and send yet.
Hey, you're just a couple towns over. Let's meet up sometime and try this.

Howie ,
Thanks for the reply. I think I need to become more computer friendly .
In the meantime I'll have to experiment with computer.
Thanks again.
Henry

It's time to think about what to bring to the meet.

So far I have a Philco 70 (no speaker ,or knobs., or tubes and broken grill) . What is there is an early very restorable original chassis (filters changed long ago), escutcheon and large tube shield. I tried it with another speaker and a filter cap clipped in place and received WBZ weak but it's not dead.

I might bring a 37-116 restoration project if anyone is interested .. The last owner tried to pick it up by the top and broke the cabinet but it is still in one piece.

Now see if I can add a picture.
Thanks
Henry

Sorry, I did not expect the preview but the message is the same.

I wish to play this radio in the center of a large room but antenna and ground are not practical.

Please keep an eye out at the next meet and pass on my search. For a complete loop, all brackets and wiring in sound condition, $$$.

Many thanks from the Southcoast of New England where NEARC members are scarce.

Chas

Friends,

Still looking for usable doors for an RCA AR-812. These doors have the holes in the bottom to accept pins that are in the cabinet.

I can't get to the meet as usual, little too far. So please pass it around. Best!

Where are all the Southcoast NEARC members?

595. Illness forces downsizing

Yahoo group: NEARC_Radio
Date: 2015-09-22 16:48:55 UTC
From: k1wgn@...
Topic: 390 Message: 595

This is a re-post from last NEARC meet, updated. I will try to post photos again. If you see something of interest, I can bring it Saturday. I'll be in the tailgate area. I would like to avoid bringing heavy items unless there is genuine interest so please let me know. Alternatively, contact me if you would like to look over the stuff here in Paxton, Mass at another time.

Like many of us I've been collecting and salting stuff away for about sixty years (I'm 70). Just about everything has to go. I'm pretty well overwhelmed and I could use some help making sure it ends up in the right hands. I will post some pictures to this group site once I figure out how to do that. I'd like to get fair, reasonable prices but it's not about the money.

1. ARRL handbooks, all years of the small format, 1926 (the reprint) thru 1978; plus scattered subsequent years 1979 and up in the large format. Other radio related books.
2. Hammarlund collection; Hi-Q battery set, HQ-140, HQ-150, SP-200, BC-1004 with orig. PS nicely restored, several BC-xxx parts sets and PS's. Manuals and other paper.
3. GPR-90-RX (sold)
4. Extensive early Heathkit collection; receivers (including K-2), some ham equip. (no xmitters), test equipment including V-3 mockup. Some audio equipment including the chair side enclosure with FM-3A, BC-1A, WM-4, WA-P2 and changer. TT-1A tube tester. Two file drawers of manuals and other paper. And much more!
5. Nicely made homebrew six meter 250 Watt amplifier, two meter 250 Watt amplifier, common PS & meter panel with rack cabinet. Similar units under construction for 1.25 meters and 70 cm and spare 4CX-250's included.
6. H.H. Scott shipboard entertainment receiver from WW-2 era model CZC-46209 with original cabinet. Works well.
7. Hallicrafters T-54 television, 7 inch, with channel 1, in metal case (similar to SX-62 case) working condition.
8. National 1-10A VHF receiver, no power supply.
9. Hallicrafters parts sets: SX-16 (?), S-19, SX-25, S-52, S-76, SX-100, 8R40
10. Two rack cabinets, 19" by 10-1/2", fit many receivers

Etc., etc., etc.

Date: 2015-09-24 04:57:12 UTC
From: jeff@...
Topic: 596 Message: 596
Attachments: 3 described; binary payloads are missing from this source WARC

Hi folks. If anyone has the following early '40's GE parts, I'll be glad to purchase them from you at Brookline:

1) Knob with arrow. Used for on/off/tone and band switching.

2) Two piece station push buttons. Most of the time, the inner bakelite and the outer clear plastic are fused together, but occasionally, the two pieces are able to come apart. If they have come apart, I only need the outer clear shells.

3) (This is a tough one.) The model L-640 I am restoring has a Worcester heritage. The other two station tabs either did not survive my attempts to straighten and remove them, or other local call letters were hand written and pasted on top. I am looking for WORC and WAAB station tabs that are the same style as the WTAG and WBZ tabs you see here.

Thanks for any help. See you on Saturday.

Jeff

Thanks, Alan. I wish there was a notice that photos were pending approval. I'm attempting to remove the dupes, but the totally random order that Yahoo has arranged the pictures is making it slow going.

It's been a while since I've uploaded pictures to a Yahoo Group. They've managed to make it much more inconvenient to edit. Maybe the same developers that did Windows 10 email.

623. silly stupid radio help advice needed

Yahoo group: NEARC_Radio
Date: 2015-10-29 22:13:38 UTC
From: John Nowosacki
Topic: 623 Message: 623

Hello group,
I'm working on a very silly, stupid GE clock radio for a friend, and it's turned into a nightmare.
Couldn't really be much simpler radio, just a 5-tuber 12BE6, 12BA6, 12AV6, 50C5 with 35W4 rectifier.
I replaced the electrolytic filter caps, paper coupling caps, and even built a discrete version of the couplet (7 legged device) in case it was bad.

Symptoms are as follows:
On turn on, radio plays for about a minute. Audio fades, replaced by crackling/popping noises that last about 2 minutes or so (seems longer due to frustration of normal audio going away) then audio comes back and radio plays just fine.
The first 2 or 3 minutes of strange operation is very annoying. #44 mazda light bulb also flickers a bit during the noisy period.
I've tried different 35W4 tubes and different 50C5 output tubes, with no change. Wiggling things has no effect, freeze spray has had no effect, unless I'm not hitting the right spot. Very few components visible on board due to couplet. Should have been a 30 minute repair to replace filter caps and couplet, but I just can't figure it out. Must be halloween and this thing is haunted? I even replaced electrolytics a second time in case one was bad, but no difference (no hum, good sound when it works)
Any suggestions appreciated.

Could be a bad tube socket. Could also be SMD in one of the IF transformers...

Thanks Tom. Thought about tube socket, but all seem ok from visual and ohm meter inspection. Not sure what SMD is?

SMD is Silver Mica Disease. There is a capacitor in the base of the IF transformer that is made of a small piece of mica with two sections of silver on it. Over time the silver reacts with moisture in the air and grows "wiskers" that bridge the gap between the two silver sections. This results in an interminent short in the capacitor and results in the radio sounding like a "thunderstorm". The solution is to disassemble the IF transformer and replace this mica capacitor with a new silver mica capacitor. The AM band normally uses about a 100pf capacitor. The radio will then need to be realigned. If you use Google to search for "silver mica disease" you will get lots of additional information.

John,

I'd also suggest Silver Mica Disease as the culprit. BTW... I recently sent in an article on this very subject for our newsletter. Also, there is an abundant amount of information on what to do. Probably the hardest part of this is the disassembly, and rebuild of the IF's. To make an easy diagnosis of the IF, tap on the can. Try it with a popsicle stick, insulated metal rod (screwdriver) and listen to what happens. These are some of the things I tried. "Some" schematics have the capacitor values. If your schematic doesn't have the value(s), try a 100pf to start and work it out from there. Be sure to take pictures while you are working on this so you can get it all back together. I put the new caps on the outside of the can and under the chassis.
When you finally get the mica discs out, take a look at them. You will see how the contact shoe and the mica disc have shorted. I have three more Zenith's to work on. 2 are AM/FM table tops that will need more work than the radio in my article.

Good luck.
Joe Devonshire

That 'thunderstorm' sound is a very accurate description of what I am hearing intermittently from this radio. It doesn't seem to go away with any movement of tubes in their sockets or freeze spray on any components, so unfortunately SMD sounds right. Never had encountered this before, so never had to change this mica cap, either. Challenging, but that's how we learn new things.
Thanks,

I've seen 12AV6s with intermittent cathode to filament shorts. Silver Mica is certainly a possibility.

Thanks for all the info on this 'new to me' disease. I'm not sure it's worth all the effort and time to make a silly plastic clock radio work. Probably best to just avoid radios of this era from now on, or maybe just part out some radios for their IF cans and swap the entire assembly for one that doesn't have the disease.

Bruce,

That's what the article is for. As for our current radios, and those we will collect, this is going to be an additional issue for us to resolve as they age. Radio's from the 50's are not the only victims of this. I'm not advocating unilateral IF restoration, rather to add this to our checklists for radio restoration.
I first became aware of the Silver Mica Disease at a NJARC meeting nearly 5 years ago. I haven't been able to locate the video from the meeting, but I will continue to inquire about it. It seems that the problem will rear its ugly head by the introduction of heat and vibration. I've found that tapping on the chassis and the IF's will give the best response. Here are some sites that may help...

http://ppinyot.com/if_transformers.htm (I'm not sure how much longer this site will be up. The gentleman who ran it passed away.)
http://www.junkbox.com/electronics/vintagedatasheets.shtml

If you can locate Dan Schoo's data sheet on Zenith IF's, you will get a better idea of what you need. AKA... Dan's Cockatoo Ranch.
Attached is my copy...

Good Luck.

Joe

Here's a charming GE tabletop with the unique feature of a simple patterned grille material that appears original to the set. If you attended the basic capacitor replacement training in September, you probably learned all you need to know in order to fix this. But you don't have to fix it. All you have to do is write an article for Radio News and it's yours free.

Howard,

Great idea and very nice radio! The snowflake is outstanding. I've already sent in an article and I am putting together the beginnings of another for next year. The Crosley model 18 that Tom, Bruce and I were talking about at Kutztown will be the subject. This is your classic wreck that I hope to resurrect. Cabinet, chassis, etc... all need a rebuild. Here's a preview...

To our membership...

I can't make NEARC meetings due to the distance. Unlike the NJARC, our meetings aren't video live streamed. So, I'm at a disadvantage with our club. But, I still support it. This isn't about the leadership of our club, it's about "YOUR" member participation.
OK everyone, I'm doing my part, how about you??? Can anyone write something about how to operate an oscilloscope and interpret what you see?

Regards from Maine,
Joe Devonshire

Howard,

Great idea and very nice radio! The snowflake is outstanding. I've already sent in an article and I am putting together the beginnings of another for next year. The Crosley model 18 that Tom, Bruce and I were talking about at Kutztown will be the subject. This is your classic wreck that I hope to resurrect. Cabinet, chassis, etc... all need a rebuild.

Here's a preview...

To our membership...

I can't make NEARC meetings due to the distance. Unlike the NJARC, our meetings aren't video live streamed. So, I'm at a disadvantage with our club. But, I still support it. This isn't about the leadership of our club, it's about "YOUR" member participation.

OK everyone, I'm doing my part, how about you??? Can anyone write something about how to operate an oscilloscope and interpret what you see?

Regards from Maine,

Joe Devonshire

From: radioorphanage@...
Topic: 643 Message: 643

Ed Harrow in Hopkinton, MA contacted me about a 5-Meter rig his father built:

Hi Bruce,

I’m trying to find a worthy home for a 5-meter rig my Father built and installed in his Model A. If you have thoughts or suggestions that would be terrific. I’ve sent an email to the Mass Model A club, and the Central Mass radio club, but thus far have heard nothing. I also have all his QSL cards and log books; all suggestions welcome.
I’m in Hopkinton, MA. I want a good and loving home, but I’d love a cool $million or so, LOL. Seriously, I’d like them in the hands of someone who will appreciate them. We have both limited space and limited understanding (I’m not an EE, or a HAM.
You can contact Ed at ed@harrow.org -First come, first served.

From: radioorphanage@...
Topic: 644 Message: 644
Attachments: 3 described; binary payloads are missing from this source WARC

My friend Jack in Manchester, NH has a Curtis Mathes Cart Vision Console Television in Manchester, NH. He would like to give to someone who will enjoy it. This is Rare, as the Cart Vision system predated VHS ,Beta, and the RCA Disc video systems. Curtis Mathes was always way ahead of their times, and had the price tag to go with it. This is assumed currently unworking, but comes with some prerecorded movies. Its in his basement, and will have to go up a flight of stairs. You will need to bring your own truck and help. You are responsible for yourself(ves) on Jack's property. Its free, and I doubt if you've ever seen one, or will ever see another. Contact Jack at dwarless@comcast.net or phone 603 625 6779- 9am to 9pm. First come, first served.

My friend Jack in Manchester, NH has two Jukeboxes he would like to see someone else enjoy. You must take the pair to give him room. The 1st is a 1953 AMI E120. I've heard this one play, but its been a while. It may work, or would take very little to get it going. The 2nd is a 1955 AMI G80- not as good, but complete and restorable. He has manuals- I think for both. The G-80 is in his basement, and will have to go up a flight of stairs. So, bring your truck and a couple friends. You are responsible for yourself(ves) on Jack's property. Super good price, but you must take both: $350 firm. I would have bought these in a Heartbeat, but I don't have room unless I sell the 3 Jukeboxes I already have. Contact Jack at dwarless@comcast.net or phone 603 625 6779- 9am to 9pm. First come, first served.

Wow, a Cartrivision! I think I still have a package of schematics for the one I owned in the late '70s. It WAS indeed way ahead of its time -- a nearly-affordable home VCR that could record and play back color video. Sears sold them too, along with the small catalog of pre-recorded tape cartridges.

I guess I wasn't paying attention back then--never heard of Cartrivision until today!
I do remember seeing the first Ampro 2" machine when I was in AF tech school in Biloxi, Miss. in '62. At $50K those were not aimed for the home market. Two inch tape running 15ips. Transverse scan. Air jets and guides curved the tape as it was going by the head spinning at 90 deg angle to tape.
In those days some experimenters were getting crude resolution with linear scan, running 100 ips, with about 1/4hp drive motors. Room full of tape when it broke!
Paid $50 for my first video tape machine: Sony 1/2" tape, helical scan, 7" reel to reel. B & W. NOT quiet! With plastic cover open you could hear that helical scan head across the room! 1 hour 7" reels of blank tape were $40ea in those days, but I had a deal with the company that handled surveillance cameras at my bank. After 6 months archiving surveillance tapes, they were disposed of, and I got them for $5 ea.
Then I got a cute little Akai battery operated portable. Still have it, in fact. 5" reels of 1/4" tape. Little 3" monitor was detachable. Recordings were possible with regular audio tape, but "polished" video tape was better with it's lower friction. Made up my own reels of 1/4" tape by rigging a razor blade on above mentioned Sony machine. Put 7" reel of 1/2" tape on supply spindle and stacked two 5" dia regular 1/4" reels on takeup spindle. So...a $5 reel of used surveillance tape yielde me four 5" reels of 1/4 tape for the little Akai.
NOW I notice camcorders have no moving parts except the zoom lens motor--all solid state memory.

Hello,
My name is Lisa Gordon and I am the owner of Family Heritage Estate Sales, LLC in New Jersey. I am writing to you in regards to an extremely large sale that we are having in Mt. Holly, New Jersey. A large part of the sale will be a collection of antique radio's that were collected over the years by Richard Hurff. Possibly a past member of your club? I am not sure.
I thought I would include a link to our website so that you may view some of the pictures from our sale. This information may interest your members. If so, please pass on the link or let me know if there are any questions. Thank you for your time and I hope to see you at our sale.

Sale date: November 19, 20, 21, 22 (9am to 2pm, each day)
63 Madison Ave, Mt. Holly, NJ

Regards,
Lisa Gordon/Owner

NEARC members...

Dick was a long time member of the NJARC. He passed away suddenly this past spring. If you can make the trip, it will be well worth the effort. As you can see from the listing, he had many interests. He was sometimes known as Mr. Majestic due to his interest in Majestics.
You can see Dick at one of our meetings (NJARC) on page 5 of the attached Broadcaster.
http://www.njarc.org/broadcaster/BC2010-05.pdf
Mt. Holly is located just east of Philadelphia near Rts. 70, I-295 and the NJTPK.

Regards,
Joe Devonshire

Greetings:

For any of you who enjoy the beautiful "Music of Your Life" on WAZN evenings and weekends may have noticed a swith this week to ethnic, mostly Russian Language programming in the evenings and overnites.

I spoke to the Station Manager and he informed me there is an equipment issue that precludes pickup of the feed from MOYL. They hope to remedy and will play Music again at nite. They do play MOYL during the day at times 1-4pm. They broadcast from a tower Lexington, MA. Studio in Woburn, MA.

If you don't listen you may wish to try them out when they fix the tech. problem.

Paul

658. Giving Thanks with NEARC

Yahoo group: NEARC_Radio
Date: 2015-11-26 13:44:54 UTC
From: radioorphanage@...
Topic: 658 Message: 658

I hope you will all enjoy this day with Family and Friends.
As I look back over the past year with NEARC, I give Thanks for:

The Sellers at our shows who understand that it is far better long term to give a young person or new member a significant price break than to extract maximum profit.

The Officers and Volunteers who make a Radio Show go almost seamless every time.

The Instructors who ran our 1st Training Session in over 20 years.

The Officers and Volunteers who keep our Website, Yahoo Group, and Facebook running and improving.

The "Behind the Seen" pros who deal with Planning, Membership, and Finance.

The Members and Sellers who put our Rack Card Advertising in different shops to increase awareness of NEARC and our Shows.

The Members who have helped others through our Yahoo Site.

Our 2 Fearless Editors who bring you an excellent RADIO NEWS four times a year -expect Internet Issue Dec 1 and Snail Mail Issue by Dec 7.

The 35 NEARC Members who have sent in an article for "The President's 40 Article Challenge".
Some sending multiple articles.I need to see at least 5 more in the next month.

Thank you all for being a Member of New England Antique Radio Club!

In the late 70's - early 80's period, I had the privilege of working with a former tech from Dumont. He had some great stories from the early days of television along with other tech stories. It's too bad that I didn't write them down back then. It would have made for a great historical record for our club. I haven't seen him in years, but when I looked his name up, he is still with us at 93. In case any of you know anyone who was with Dumont, his name is Roscoe Jones. When I last worked with him back in 1981, he was working for a Piano / Organ dealer in PA.

Okay Team. We have a month left to come up with 5 more articles for Radio News. A big "Thank You" to all who took the time to write an article for our beloved newsletter. This radio is free provided that you write an article for Radio News. If you have already submitted an article for an upcoming edition you are also entitled to have this radio at no charge. I would like whoever takes this radio to make a good faith attempt to engage others in the club who have not submitted an article yet.
The Radio....
A Westinghouse WR342 console. A medium effort restoration needed by my standards, but needs some serious TLC. I presume it was stored in a damp location. Interesting dial with motorized tuning and magic eye.

Happy Holidays to All!!!

Howard Mariotti, KA1NAH

Yes, Craig, that's the same physical radio. I uploaded the photos to Rmorg a couple years ago. I've seen a similar chassis on eBay before but never a complete radio of this model.

Hmm....very good! I'm about to give Bruce another restoration article, which would I guess qualify me for your offer, but I sort of promised wife I'd back off on consoles and only get an occasional table model. Just started collecting and restoring this year, though I've been working on electronics and tube circuits for 65yrs. My consoles: 1941 GE J-805, 1937 Zenith 6B-164 (farm radio converted to AC and tuning eye added), and two 1941 Zenith 10S669's.
I'm in Barrington, about half hour from Bruce, who I first met back in the 90's when he was still with Sylvania and helped a friend and me with a lamp problem at the old IOKA theatre in Exeter.
Where do you live, sir?

673. Anyone for test equipment

Yahoo group: NEARC_Radio
Date: 2015-12-09 00:17:12 UTC
From: alanfinger@...
Topic: 673 Message: 673

Hi All,

I went to an estate sale yesterday and the homeowner was a ham/packrat. He had a two Heathkit HR-1680 and HX-1681 Receiver/Transmitter pairs. He also had a ton of test equipment: Signal Generators, meters, oscilloscopes, etc. The photos below are just a small sample.

I know we had quite a few budding repairers at our Brookline classes so I was wondering if anyone would be interested in purchasing some test equipment if I could get it for the Westford or next Brookline show. If there's enough interest I'll get a detailed inventory and see if I can make a deal for the lot. Please only respond if you are really planning to buy vintage test equipment for your bench.

Subject: [DVHRC] ATOS THEATRE ORGAN RADIO [Theatre Pipe Organs]

Hi gang, ... I just discovered this Internet station ...

Theatre Organ Music 24 hours a day, 7 days a week!

ATOS Theatre Organ Radio - now streaming multiple high quality options. ATOS is excited to provide ATOS Theatre Organ Radio, an Internet radio station dedicated to the theatre organ.

In partnership with Steve Worthington, longtime ATOS member, theatre organ audiophile and pioneering Internet broadcaster, we are pleased to offer a collection of vintage theatre organ tracks together with a vast library of selections from today's top recording artists.

In addition to the music, we offer a variety of scheduled program content including: interviews with theatre organ personalities, musical, historical and technical educational content along with archival "live" concert broadcasts, and the quality of the recordings are outstanding! Enjoy!

Topic: 684 Message: 687

Howie et al,
It’s a rare set by any standard, but hard to say just how rare it is, and surely not worth $14.8K.That said, it’s a solid “Radio Investment”, and beautiful “Eye Candy”. 50 may be correct.
I’ve personally seen only one. The one I sold you. It was surely in my top 5 consoles.
I’ve had hundreds of consoles over the years, as many as 40 in the house at one time.
Before I retired I brought that number down significantly- to 6 four years ago.
I have an agreement with my son not to buy anything “bigger than a breadbox, or over 50 pounds”. I break it several times a year, but not as much as I use to.
I took 3 consoles to RADIO 44 three years ago. Sold you the Arvin, Adam a Zenith Shutter Dial, and I don’t remember who bought the 3rd (Zenith).
There is a nice Deco MidWest in my Living Room, and an agreement with my wife that there be the only one console in the Living Room.
There is my son’s favorite Zenith Big Dial in his old room. and as soon as he buys a bigger house (soon), I’ll drive it there.
The 3rd is another 18 tube MidWest (their last I believe). I’m planning on bringing it to RADIO XLVII in March.
Enjoy the Arvin Howie,
Bruce

688. POSSIBLE RADIO & JUKE CACHE in Goffstown, NH

Yahoo group: NEARC_Radio

I've been by that facility before. Lots of juke and old radio/electronics both inside and outside the building. It's been well over a year since he passed, so I'd be surprised if it's all still there the same way it was when I last went by

Ten plus years ago, while I still worked for Sylvania, I use to drive by his place frequently on the way between our manufacturing plants in Manchester and Hillsboro.
He had a few good things- mostly Jukeboxes. He was impossible to deal with. He made eBay look cheap. In 15 years of driving by, stopping about a hundred times, I bought fewer than a dozen things.
God Bless anyone who can deal here,
Bruce

692. RCA Radiola 60 or 66 Power supply wanted

NEARC Member Bob Fuerderer (Keene, NH) is looking for a replacement crystal unit for an old crystal microphone. Any idea where you could purchase one today ? If you can help him out, call 603 352 3005 (no email). Also, respond to group, as I'd like to know the answer also.
Thanks,
Bruce

694. Rhode Island Radio Exhibit in Woonsocket RI

Yahoo group: NEARC_Radio
Date: 2015-12-18 02:03:51 UTC
From: Len Arzoomanian
Topic: 688 Message: 694
Attachments: 1 described; binary payloads are missing from this source WARC

Museum of Work & Culture Gallery
"The Birth of Rhode Island Radio"

When: Through January 31
Where: The Museum of Work & Culture (42 S. Main St., Woonsocket, R.I.)
Admission: Adults, $8; Students & Seniors, $6; children under 10, free with adult admission

The Museum of Work & Culture is proud to present "The Birth of Rhode Island Radio: Experimenters, Manufacturers, & Broadcasters" in its gallery, now through January 31.

The exhibit, which debuted at the Rhode Island Historical Society's Aldrich House in Providence this past spring, explores the state's contribution to the technological and cultural development of radio during the first half of the 20th century. Artifacts include locally manufactured radios and accessories from the collections of Rhode Island historians Len Arzoomanian and Ned Connors. The exhibit will also feature recordings from former WPRO singer Leona Sherman née Smith.

On Sunday, January 10, at 1:30pm, Connors will give the first of this year's "Valley Talks," a series of five lectures presented at the Museum of Work & Culture on alternating Sunday afternoons. Connors' talk will explore topics including Rhode Island manufacturing's contributions to radio development, local radio personalities, and the history of French-language radio programming in Woonsocket and West Warwick. The discussion will be followed by a gallery tour and opening reception.

Connors received his B.S. in Technology Education at Rhode Island College and an M.A. in American Studies from Brown University. He has been a consultant in historic preservation since 1994. He has had a lifelong interest in the history of technology and popular culture, particularly the early years of radio.

For more information, please contact the Museum or Work & Culture by calling (401) 769-9675 or emailing Education & Program Coordinator Sarah Carr at scarr@rihs.org.

695. The President's 40 Article Challenge has been met

NEARC Yahoo Group,
I thought I'd start here, as you are the 100 of the 400 NEARC Members who have taken the time to joined the NEARC Yahoo Group.
We have received Articles for RADIO NEWS from more than 40 NEARC Members.
I'm certain that you would agree with me that the last couple of issues of RADIO NEWS have been "Top Shelf".
We have quality material for the next 2+ years.
I'd like to thank all of you who have pitched in to make NEARC a better club.
As agreed, I will run for President again next year for the 2017/2018 term. If elected, I will serve that term.
Merry Christmas all,
Bruce Phillips
President NEARC

From: Bill
Topic: 688 Message: 698

Len -

I loved seeing your post. The radio in the cover photo is the Polleroyal Model 639 console, made by Royal Radio of Providence, RI in 1926 or 1927. Almost by accident, I acquired one of them a number of years ago. It was/is in great shape, so I went looking for info. The radio is apparently rare enough, or the mfr small enough, that info is hard to come by. After months of searching, I found only one other guy who has one (speak up, Martin M), and his was a coffin set rather than a console. The circuit is a relatively standard straight-line TRF design, but wooden horn Utah speaker is beautiful.

I wish I could be there for the presentation, but I will be out of state at that moment. By any chance will any of it be streamed, or available for separate purchase? I would really like to learn more about Rhode Island radio in general, and PolleRoyal in particular.

Bill

Hi Bruce

Those were good times when NEARC was in its infancy. Life kinda got in the way and I was out of "radios" for a while but are you ever really out? This past summer the Rhode Island Historical Society contacted me about doing the first Exhibit at Aldrich House in Providence. It's funny because I offered to do one years ago and they basically said it was too new! So I agreed to loan some sets and they put on a great exhibit. Then they wanted to set it up again in their Woonsocket Museum. So now I'm back in it! Going so far as to start looking for Rhode Island made sets and parts and setting up a website dedicated to Rhode Island made radio. http://www.rhodeislandradios.org
I planned to get up to the last NEARC meet but was sick that morning and not up to the drive. I will however make the next one for sure!
I hope many of you can come down to support the exhibit.

Len

Hi Bill

Not sure if they will stream or do a pod cast but I will ask.
Not a lot on Polle Royal. I recently joined Ancestry.com and have found a wealth of information on the companies in Rhode Island that produced radios and parts and the people behind them. I have a page dedicated to Polle Royal with little information right now but I have a load of updates ready to post in the near future. They were actually a novelty company in the first place. They made many versions of the TRF, 3 dial and 2 (2 dials ganged together with 1 controlling knob). Visit my website for more info and photos of their other sets. I have the console and coffin version of the set in the poster and one each of another version with nymphs blowing little horn speakers.

I bought and use the FM transmitter kit for rebroadcasting various sources of programming around my house/property so I can tune in whatever music I like to hear on my various old radios. I can rebroadcast Sirius XM for music of the 40's, 50's, etc., or playlists from iTunes from my computer, Pandora from cell phone, whatever. I went to Amazon and bought another kit just in case. Thanks for letting us know.

my $.02: If it's the black or painted bakelite one shown in the picture, it is somewhat uncommon, but that does not make it a desirable radio if that's what your friend is trying to figure out. I got mine for 5 bucks. The knobs on mine are incorrect - it usually has "acorn" style knobs.

William, et al,
I agree with Howie.
The Maguires 560, 561, or 16L from 1946 was also marketed under the name Brewster Model 9-1084 or 9-1086.
Not common, but not rare. $50 tops in perfect condition.
Bruce

I received the message below from a Fellow NEARC Member.
This is a hard to come by set.
Rick is rdesmaraisnh@yahoo.com
He can send pictures, as he did to me, but I could not pull them from his email.
This is 1st come, 1st served, so contact Rick.
Bruce

I'm an NEARC member and looking to move a radio. I have a Capehart console (pictured) that my dad and his brother and sisters purchased for my grandmother in the 50s, and it's supposed to be special as it has a mechanism for flipping over a record. I've sat on this for 15 years but it's huge and heavy and not really something I'm into. I want to give it away, not sell, but to someone who might appreciate it (and pick it up). The outside is in great shape, except for the typical areas on bottom where it's been bumped a few times by a vacuum cleaner likely. If you know of someone in the club who might like this, can you please direct them to me. They can come and see it, and if interested, get it back into the world. Thanks.

Rick Desmarais

Alan,
I have the knob- correct size with the 6 lines, but the shaft size looks 3/8’ instead of 1/4’.
Is that what you are looking for?

Hi Bruce,

That's the tuning knob. It's designed to slide in and out on the shaft to switch between fine and coarse tuning.

It turns out each of the other (1/4" shaft) knobs have their function embossed on the skirt. I need the one marked for the selectivity control.

Alan

733. Resistance of the speaker field in an American Bosch 360

Yahoo group: NEARC_Radio
Date: 2016-02-02 00:45:44 UTC
From: jeff@...
Topic: 733 Message: 733

Hi folks. I currently have a burned out speaker field to an American Bosch Model 360W (Tombstone version) awaiting a rebuild by Nick Dorazio of The Speaker Shop. But since American Bosch does not publish the value of this field (typical of them), it has been an inexact science to figure it out, to say the least.

My most accurate calculation, using the voltage drop across the field and the total amperage draw of all tube plates and screens downstream from the field - plugged into an Ohm's Law calculator - indicates an ideal resistance of 1333 ohms. But Nick remembers 1800 as the value, although that was for the 8 inch console versions and not necessarily the 6.5 inch table model speakers.

I was wondering if anyone out there has an AB Model 360, any version, with an original functioning speaker field who can take a measurement and tell me its value.

Thanks.

If Nick is rebuilding the speaker (and therefore the field coil), he should be able to just rewind the coil on the same bobbin and, using a micrometer to figure out the wire gauge (I'm sure cutting into the burned part will reveal at least some measurable wire pieces) and rewind the same coil. In that case, there is no need to figure out the DC resistance. If, on the other hand, a PM speaker is being used as a replacement and a resistor is being substituted for the field coil, the resistor usually has to have a higher value than the DC resistance of the field coil whose inductance adds to the overall impedance. Field coils generally vary from 1 or 2 henrys to as high as 20 henrys. In the latter case, I usually forego the math and use trial and error to get the correct resistor size. Best Regards, Howard

From: Jeffrey Gill
Topic: 733 Message: 740

Nick is saying the original resistance of the field had to be around 1400 ohms due to the 34 gauge wire and the number of turns his machine counted. My calculation using Ohm's law, considering the voltage drop caused by the field coil and the current draw of all the plates and screens downstream from it, resulted in 1330 ohms. (1300 seems to be a popular value.)

The coil turned out to be totaled. The burnout occurred right down on the bobbin and breakage occurred at other points in the unraveling process. He notified me a couple hours ago that the replacement he built is ready to go. He is only rebuilding the coil, not the whole speaker. The output transformer primary was also toast. The whole assembly was a rusty, dusty mess. But everything has now been dismantled and cleaned, and it's ready for reassembly when the new transformer and coil arrive.

Jeff

That's what I did on a set -- turned out to be around 6000' of #26
(I think). I had to make a new bobbin from a plastic wire spool since
the original cardboard fell apart.

Winding rig made from scrap wood and a piece of threaded stock
with fender washers and nuts to clamp the spool in place worked
a treat. Use a variable speed drill to drive it, and work slowly to
keep the wire under control.

cheers,

Dick Joltes

FINALLY! Something to listen to on all these old radios we fix up1
Yeah, I'm probably the last to find this. Most or all of you folks have already been listening to "Zoomer radio from Toronto....
Just got back into fixing radios after about a 50 year hiatus, and SO frustrating that the good music I used to tune in on AM is GONE---just talk, talk, talk.

This evening I just finished restoring a 1939 Belmont 507 battery/AC radio, and when I fired it up and dialed around a bit found this station. Midnight Blues was on, so I turned off the little Belmont and fired up one of my Zenith 10S 669's to hear it better on the 14" speaker.

I'm also in SE NH (Barrington) and it was coming in like a ton of bricks--but it was late evening (midnight), and I have a longline antenna: about 60ft of fine copper wire strung along edges of ceiling in a big room with 18ft cathedral ceiling. Just tie half dozen sets into the same wire which is just about invisible and it works fine. Have it mainly for yanking in the shortwave stations, but fine for AM too. I'm on high ground here, and get good TV reception: "cut the cable" few years ago and put up the $80 Radio Shack aerial (about 7ft boom) with rotor and get 32 channels HDTV for free. Actually, I don't use the rotor--just leave it aimed south and get Manchester, Boston stations 60-65 miles away, and Portland off the back of aerial fine.
Back in the old days before cable I got good reception. Watching the moon landing in Aug '69, it was 3am and Boston stations were off air and I was getting useable color signal from either Providence or Hartford--don't remember which.Cut the cable because only programs we were watching were FoxNews and Trinity Broadcasting---$71 a month for two stations didn't make sense. Now we watch the old shows on MeTV and Cozi for free.

I hear it just fine down here in Randolph MA at night, even without an external antenna. The station is definitely an asset to those of us who often have a chassis on the bench under test.
For the radios that aren't too sensitive, a homebrew loop antenna always captures 740

Attachments: 3 described; binary payloads are missing from this source WARC

I picked up this old beast for $30 out in western MA via Craigslist last week. According to the name tags it’s a model 71 with model 70B chassis.
It was complete with all the tubes and in amazingly good condition--legs sturdy (good, cuz it weighs 95 lbs !) and good tight veneer everywhere except a thumbnail-sized flaw bottom left side. All I've done for it so far is replace the shredded grille cloth and go over it with Old English.
I've gotten back into this old radio fun just in last 8 months--few 1937-41 GE and Zenith consoles, half dozen table models same vintage, all re-capped and working now.
So far, with superhets all I've needed was schematics--if I couldn't find them free online I've gotten them from good ole Steve Johnson at Antique Radio Schematics.com. But since it's been over 50yrs since I messed with a TRF it's sort of "back to school" for me with this one! BUT....lo and behold, I found a free download .pdf which is 30 pages of schematics allignment and repair info for this old Majestic beast! Info probably handy for ANY TRF repair/refurb work, so that is WHY I'm writing this blurb!

Photos of my 70B attached.
Apparently this message board doesn't "like" the 2.6mb size of the service manual document, so I'll try to send it separately in another posting!

Paul,Yes! Night before last, with the day's heavy rain still in the air, I didn't get a very good signal, but then last night with dry weather it was back fine.I guess most of the day and early evening isn't my type of "old time" programming, but then later with Fibber Mcgee and all it gets better. Sunday evening though, when I get home from church it should be nice to get the 7-11pm big bands show!

Nice find, and a good price for a radio that appears to be in good condition.

If the Model 70 is anything like the Model 90 (and I think it is), you will have no problem getting the radio itself running. However, you can expect to spend a LOT of time on that big black power supply in the lower level of the cabinet. As I recall, there are a number of tapped power resistors, most of which will be open. There are also a number of condensers, many of which will be bad, and a power transformer which will probably be good. Also a choke, maybe? Also bad. The fact that much of the circuitry is packed in tar is a special headache.

All of it is manageable but time consuming. I recall that when I did my Model 90 many years ago, I wrote a paper covering the power supply restoration, with diagrams and a bunch of information including voltages, terminal numbers, and component locations, and posted it either on RARP or on NostalgiaAir. Sadly, I can't find it in a quick search, but it is there somewhere.

Depending on how much of a purist you are, you may find that you can use a salvaged computer power supply (very inexpensive) for the low voltages in the set. That will leave you working on only the high voltage section of the PS.

Good luck. You will have a nice radio when you are done.

All -

I have a nice clean copy of the 30-page manual you are referring to, and
I will attach it here. It is only 327KB. Yes, it is in djvu format, and
I really don't want to start another holy war concerning djvu. If you
don't like djvu, that's fine - just use another source. For me,
IrfanView (free) opens it and prints it perfectly.

Howard,I guess I responded before about this. I have a big house, but seem to have used up about all my wall space for displaying these wonderful old radios! But that big dial and motorized tuning is tempting. I was really "done" collecting consoles, but I grabbed the Majestic because I had a Majestic given to me when I was about 10 by two old maid sisters whose lawn I mowed. Think it was 30's superhet model, but it WAS a Majestic.See, I'm also a movie buff and have big collection of cameras and projectors, home theatre with soundproof projection room, pair of carbon arc 35mm theatrical projectors all set up, etc. PLUS player pianos, an 1886 reed parlor organ, wind up record players, etc.so you see what I'm up against! Plus I'm 75 and supposed to be "thinning out" rather than adding to my toy collection!

Howard,I'm thinking more about your Westinghouse. Here's why: I might give away or sell cheap one I have--to a fellow in church.This old radio kick started last summer when someone in church gave me an old Stromberg 1121. He plays piano and sax in our pentecostal church and has been professional jazz sax man for over 40yrs, probably one of the best tenor sax players in NE. The Stromberg was not the good ole upright I'd pictured, but rather a 1946 side-by-side radio/phono. It's a hot 11 tube radio, so I saved the chassis and speaker and junked the cabinet (I already have a 1946 Westinhouse side-by-side with beautiful Hipplewhite mohagany cabinet (from the dump!), plus couple Magnavox side-by-sides. BUT this got me going on old "back burner" desire for a grand old upright! So I got on Craiglist and first find was 1941 GE 805 for $40. Recapped it, changed speaker grille and refinished it. PHOTO attached. THEN I kept watching Craigslist and grabbed 3 Zeniths (which I think I mentioned to you awhile back: two 10S669's and an AC converted 1937 farm radio. I "homed in" on Zeniths because my late father-in-law was radio/TV repair shop from 1930 to 1970 and was RCA and Zenith dealer.
Jimmy Driscoll played pro baseball for the Oakland A's for 12 yrs way back when, and is in my church, and asked about where to find one of these grand old shortwave sets. I casually said to just check Craigslist. BUT he doesn't know electronics enough to fix one up and he's a SUPER nice guy, so I'm thinking if I gave or sold him the GE I could park your Westinghouse in that spot! The 8 tube GE works OK, but I'm not "in love" with it like the hotter performing Zeniths...
SO.....WHERE DO YOU LIVE?
Craig

Just checked map--this will be easier than I expected! When I hear "Boylston" I think of the street in downtown Boston, but if I'm looking at map correctly the radio is out in the Clinton / Sterling area. Know that area well cuz son and his family live in Sterling! Give me an address, and if it isn't snowing I'll be there say 11am to noon Friday!

Same here! What a nice break in weather! Hope you enjoyed your outside time. My return trip was better than my last, which was I think a week ago Monay, when I got the Majestic in Orange: snow was due to start "late morning", but I've learned to wait til after the morning rush to go through Plaistow and on 495. I got out Rte 2 to Orange and got loaded and on way home by 11:30, but started hitting flurries by Fitchburg, then swirling powder but still OK road surface from Leominster over to 495, but then it got heavier and heavier going north, 45mph , then down to 35mph by Lawrence, but at least everyone was driving sensibly and saw only two minor mishaps and got home OK. YESTERDAY was a breeze--even left heater off all the way home! Distance from your place to here is 85 miles.
Haven't decided on Radio XVI yet--too bad it would mean skipping church. The fall show in NH was on a Saturday. Bruce is a fellow born-again believer--I'll have to ask him about that! Here in Barrington there's a big annual old truck show--held on a Sunday, but it's been explained to me that for folks who work all week and come from great distances they need Saturday for travel and setup. Perhaps the same story for these radio events... I'm certainly not a die-hard legalist who says it's a sin to skip church sometimes--since we've been retired, my wife and I postpone all travel when it's snowing--including church.
The GE J-805 took up residency at Jimmy and Caroline Driscoll's up in Tamworth, NH today after church. Some nice solid daytime reception AM and shortwave, even before I strung out about 30ft aerial around their ceiling.
Time to stop this long yak and see how well big band show makes it in here from AM740!
God bless!
Craign

I'm looking over the 7BP6 power supply, and from initial inspection and a little wire tracing, I suspect that the capacitors are in big box on right that I've put red box around in attached photo. Am I right?
If that's the case, it seems like it should be "a piece of cake" to just lift that big ole box right outta there and replace with new caps connected to a barrier terminal strip mounted in place. Yes?

Subject: Re: [NEARC_Radio] 1929 Majestic

  Nice find, and a good price for a radio that appears to be in good condition.

If the Model 70 is anything like the Model 90 (and I think it is), you will have no problem getting the radio itself running. However, you can expect to spend a LOT of time on that big black power supply in the lower level of the cabinet. As I recall, there are a number of tapped power resistors, most of which will be open. There are also a number of condensers, many of which will be bad, and a power transformer which will probably be good. Also a choke, maybe? Also bad. The fact that much of the circuitry is packed in tar is a special headache.

All of it is manageable but time consuming. I recall that when I did my Model 90 many years ago, I wrote a paper covering the power supply restoration, with diagrams and a bunch of information including voltages, terminal numbers, and component locations, and posted it either on RARP or on NostalgiaAir. Sadly, I can't find it in a quick search, but it is there somewhere.

Depending on how much of a purist you are, you may find that you can use a salvaged computer power supply (very inexpensive) for the low voltages in the set. That will leave you working on only the high voltage section of the PS.

Good luck. You will have a nice radio when you are done.

Bill

From: radioorphanage@...
Topic: 779 Message: 779
Attachments: 5 described; binary payloads are missing from this source WARC

1) Edison Home Cylinder Phonograph with 2 Horns and Edison Horn Stand. This player was Victrola Repair Service one year ago with new Mainspring, new belt, full cleaning, and reproducer rebuilt at a cost of $237. Works perfect with 4 cylinders, original large Edison Morning Glory Horn and Edison stand, and a smaller more convenient reproduction horn. Pictures attached Asking $995. First option to anyone who contacts me prior to RADIO XLVII.

2) Rare MidWest 118 Eighteen tube Console Radio from 1941. The last of the MidWest Legacy. Large Sweep Dial, Green Tuning Eye, 5 Band- AM and 4 Short Wave Bands (1.8-18 MHz) 18 Tubes- Parallel Push Pull 6V6 Output , Internal Antenna, Dual “Organfonic” Speakers, Tone Control – recently serviced. This is the only one of this set I have ever seen. Pictures attached Asking $995. First option to anyone who contacts me prior to RADIO XLVII.

3) Hundreds of pieces of Test Equipment (Scopes, Signal Generators, Power Supplies, Digital Meters, etc.) Some of these sold for thousands of dollars originally. Dozens of Tube Radios and a bunch of 80s Stereo Equipment. All sold as is as seen. Some will work, some will need work. MAKE YOUR OWN SALE. FIRST COME, FIRST SERVED. YOU DECIDE WHEN TO BUY. 8:00- 9:00 am: $40 each – 2/ $75 , 9:00-10:00 am: $30 each – 2/ $50 , 10:00-11:00 am: $20 each – 2/ $35, 11:00-12:00 noon: $10 each

Howard,
It looks awesome!
It’s pretty much a console in a short box.
I’ve seen that dial on Imperial and Lafayette consoles.
The Green tuning eye is a real plus!

Joe, I've been happy with the Minwax products. I'm no expert in the wood finishing arena, but I have had good luck by brushing the first two layers with gloss urethane and then finishing the last one or two layers using spray semi-gloss. I'll bring the radio to 47 so everyone can look to see if they're satisfied with this technique.

790. Oldies Station in Canada

Yahoo group: NEARC_Radio
Date: 2016-02-25 02:22:14 UTC
From: TrainBee
Topic: 790 Message: 790

I've been having a problem with AM 740 from Toronto this winter. Recently, I caught an AM station at the top of the band, CKDO 1580 AM from Oshawa, Ontario. http://www.ckdo.ca/ It certainly has been a powerhouse here for the last few nights.

Currently, I am using a Philco 40-150 with the internal loop and about 6 ft of additional wire in the house. It tunes in better on the first SW (Police segment) rather than on the AM Broadcast band.

The station reminds me of how WKBW 1520 AM from Buffalo was that went to all sports talk several years ago.

Regards from Maine,

Joe Devonshire AB1YO

Topic: 790 Message: 791

Joe,I just fired up my Zenith 10S669 and think I'm getting that one--didn't listen long enough to get station ID. Like you, top of the BC dial and also bottom of "police" band. I see Oshawa is 35-40 miles east of Toronto--just a tad closer to us here in ME and NH. If I remember correctly, being next to large body of water (like Toronto also) may help the ground wave with electromagnetic propagation.
HEY! What's with only 6ft of wire? These low freqs love LOOONG wire antennae.I have about 50-60ft of 24ga bare copper wire strung along ceilings and up to peak of my cathedral ceilinged room, Strung along top of wall next to ceiling its just about invisible. And I have half dozen of my old radios around the room clipped onto that same wire and they don't seem to interfere with each other at all. Quick and easy, and I figure maybe safer from lightening than stringing a long line outside.
Of course I'm fortunate with a high open location here. When TV cable kept going up I finally "cut the cable", put up the $80 Radio Shack antenna (only about 7ft boom) and now get 32 digital channels for free--farthest ones being about 62-65 miles (Boston area), and that's UHF, not VHF, which they all are nowadays, regardless of channel designation. As you probably know, unlike analog days, the digital reception is either perfect or not there at all---no snow or ghosts. We mainly just watch the secondary channels with MeTV, COZI, etc for the oldies shows.
Just my 2 cents worth...
Craig

From: TrainBee
Topic: 798 Message: 798

Hi everybody,

I'm stuck on how to get the tuning knob off of a Zenith K731. This radio dates from the early 1960's. I remember reading that they used some sort of lock to hold the knobs on as a safety feature. I just can't remember how to do it. Can anybody help with their knowledge on how to get the knob off? The photo below is not my radio. My radio looks far better. I just need to get inside to replace the caps and, rebuild the IF's on this radio. Good old Zenith IF's, the quality went in, then the thunderstorm came out.

Thanks in advance for your help.

I've never owned or worked on one, but I checked the web and HERE'S THE ANSWER: remove the chassis bolts and carefully and slowly work the chassis out of cabinet, leaving the knobs in! And hold onto knobs while doing this, so as not to allow pressure to crack or damage cabinet front. Seems that knobs were made captive so consumer could not pull them off and get electrocuted touching shaft, since it's a series string set with hot chassis, even when turned off.

Subject: [NEARC_Radio] How to remove Zenith Knobs from K731

  Hi everybody,

I'm stuck on how to get the tuning knob off of a Zenith K731. This radio dates from the early 1960's. I remember reading that they used some sort of lock to hold the knobs on as a safety feature. I just can't remember how to do it. Can anybody help with their knowledge on how to get the knob off? The photo below is not my radio. My radio looks far better.

I just need to get inside to replace the caps and, rebuild the IF's on this radio. Good old Zenith IF's, the quality went in, then the thunderstorm came out.

Thanks in advance for your help.

Joe Devonshire AB1YO

Craig,

It was a snap to get it apart. Now, the first order is to replace the caps. I'm just hoping it's not a combination of that and the silver mica disease. These IF's are soldered to the chassis and they are smaller than the previous IF's I worked on. I thought I had the schematic for it, but they changed the chassis in production. The case has a 7K07 chassis listed (which I have a Sams sheet on) on it and the chassis is 7M07. Just enough of a difference to make a difference. Now I'm trying to locate that sheet.

Joe

Good! And probably a good idea to put a little grease or oil on shafts so they'll slip out of knobs easily "next time"....

I've never owned or worked on one, but I checked the web and HERE'S THE ANSWER: remove the chassis bolts and carefully and slowly work the chassis out of cabinet, leaving the knobs in! And hold onto knobs while doing this, so as not to allow pressure to crack or damage cabinet front. Seems that knobs were made captive so consumer could not pull them off and get electrocuted touching shaft, since it's a series string set with hot chassis, even when turned off.

Hey guys! This is a cute little quality cabinet I restored for our prez Bruce. First, glued the top back on where it had separated and warped up a bit, and replaced the little blocks that receive rear cover screws. VERY conveniently, the bottom came right off by removing 4 screws--this made it easy to spray edges with gloss black without having to do masking! Then stripped old finish with acetone, sanded it smooth, stained it, and then did a gloss lacquer finish. I've tended to be a urethane guy for home cabinet work through the years, but since a lot of folks on antique radio discussion forums frown on using anything but original shellac or lacquer, I thought I'd try being a "purest" this time. Quite a hassle for this old fogey! Took about TWENTY coats, with 0000 steel wool buffing between coats, to get the desired results.
In my opinion lacquer is beautiful but it's more fragile--easily water spots, and not as tough as urethane.

Photos attached....

OK folks! Back again with another show-and-tell. This 1936 cabinet belongs to our prez Bruce and had a lot of flaws, but worth the effort because of the grand restored chassis going back in it. I wish the walnut veneer saved from my junked 1928 Radiola was a lighter match, but it's all I had, and at least I've healed the hole someone had hacked to install a switch or something. Two pieces of 3 x 5 index card stock required under patch to bring it up flush. For general veneer and cabinet re-gluing I use liquid hide glue, and I use super glue for veneer patches and for minor areas where veneer is just slightly loose. For the vertical black striping detail, I didn't trust myself to try masking tape and spray paint--afraid it might seep out under tape and leave jagged edges, SO....the Sharpie indelible laundry pen was quicker and surer! This was after staining, and before urethane. YUP, back to old trusty satin urethane this time--only about 4-5 coats.

Bunch of photos attached (I hope!)

810. Help with cabinet for a Crosley Model 18AN

Yahoo group: NEARC_Radio
Date: 2016-03-10 15:27:58 UTC
From: TrainBee
Topic: 810 Message: 810
Attachments: 2 described; binary payloads are missing from this source WARC

With all of the recent discussion on cabinet restoration, I thought I'd throw this out for comment. I recently finished restoring the chassis part of a Crosley model 18AN. It's a so-so player, but I like the looks of it. The cabinet is in worse shape then the chassis was. Veneer is peeling off and cracking in other places. I can restore the cabinet body, but, as you can see in the photo, the veneer is in bad shape. In short, I think new veneer would be easier to do than to do a patch job. The vertical rounded corner on the bezel side is where the veneer is splintering.

I should be able to make it to NH in May if someone would like to see it up close. I'm also headed to Kutztown the week before.

Below is a photo of the radio before any restoration work. Can anyone throw their 2¢ in on what I can do to restore this radio?

Thanks.
Joe Devonshire

This was the only original photo I could find of the radio.

Joe,That looks fairly challenging. A matter of finding matching veneer and cutting repair pieces with grain at same angle as existing stuff. Flat sections much easer than those convex curved ones!Since it's a nice little radio, all restored and working, have you considered simply ordering a new cabinet from Crosley? heh heh...

Craig,

ROTFLMAO! If only it was that easy. Of course I picked a bear of a job. In the end, I'm not out to sell it. On a sort of serious note, suppose I just put all new veneer on it. Scrape off what is there and start new. You are correct, I'd have to cut the diagonal from a long sheet. It doesn't have to be perfect, just better than what it is now.
To put new veneer on the convex sides would be difficult. As I recall from a woodworking class I once took, you have to score the underside of the veneer to keep it from splitting and you should also steam it. Do you agree?
What would really rattle my cage would be to find a cabinet at a swap meet. The chances of that happening are probably nil. The cabinet work won't start until the WX breaks for good. As things are going here in Maine this year, that could be next week.

Are there any other experienced cabinet restorers out there? Please don't be shy.

Thanks,
Joe

Hi Joe,

Looks like you did certainly did pick out an interesting project (and, perhaps, an article for our newsletter? :-)).

Clearly the edge trim needs to be replaced. The main section is, from what I can see in the photo, a toss-up. You may be able to find some donor veneer out of another radio (It can be tough to match the grain pattern with modern veneers) or use fill and paint in grain. If you try to patch, you might want to apply two part wood bleach to the whole thing to even the color and then dye or stain to the desired tone.

I usually buy my veneers with paper backing. You sacrifice a bit of wood thickness (be aware when sanding) but get a lot in handling characteristics and flexibility to get around those corners.

YMMV,

Regards,
Alan

Joe,
 "...score the underside of the veneer to keep it from splitting and you should also steam it. Do you agree?"
I've only done a few little FLAT veneer repairs--no convex stuff--but that makes sense.
 I've done 10" radius curves with 3/4" mahogany plywood. For that I definitely put a lot of saw slots on back, got it damp, and made a series of jigs to hold it for a week to dry.
 Since most of us commoners don't own steam cabinets, just getting things wet does the trick!
Concerning whether to repair or start over from scratch: guess that depends on how much you care about keeping original appearance versus just having a nice old cabinet, how much time you want to spend on it, and whether you can find matching veneer.

If you're in the Boston area, Richelieu Distributors, in North Reading, stocks a fair amount of Mohawk. They can be a bit grumpy about "non-professionals" but will sell to you over the counter.

I've also mail-ordered Mohawk products from Pond Cove Paints in South Portland and found them easy to work with.

Thanks Alan and Craig! I seem to be striking out here, Richileu wont sell to me because I do not have an account, and am not a pro (too bad I work about 10 minutes away), Pond Cove does not have the color I want. Seems like most of the distributors on the Mohawk list either require an account or don't have what I want.

Guess I'll bite the bullet and order from AES.

Russ

Attachments: 4 described; binary payloads are missing from this source WARC

I'm helping some people clean out an estate and included is a 1950's Admiral TV in a wooden cabinet. I'm not familiar with such things but figured someone in this group would be, and maybe someone would want it. I suspect they'll part with it at little or not cost. Hopefully the attached images will give an idea what it is.

If interested, contact me and I'll get you in touch with the owners.

823. lead weights and SNORING TUBES

Yahoo group: NEARC_Radio
Date: 2016-03-13 19:08:11 UTC
From: craig.hardy@...
Topic: 823 Message: 823

I've started repairing the 1928 Majestic model 71 with 70B chassis that I picked up for $30 and I'm impressed by it's well preserved condition--tube sockets, components and wiring are still practically like new. The dial cord was broken and tangled, and instead of the usual linen (?) cord it's 1/32" braided bronze, but Adams Manufacturing Co. in Lincoln Park, MI has the exact stuff for $1.89 a foot.
All but one of the 8 tubes were still good. Of course I'm replacing the huge electrolytics in the power pack with little new film ones, and one power resister is open, but that's easy stuff! The cabinet is in such good shape that I just replaced shredded grille cloth and went over it with Old English and have no immediate plans to re-finish it.

I found a 30 page .pdf free online: "Radio Service Manual" for Majestic radio receivers published by Radio and Television Institute, Inc., Chicago. It's rather complete with schematics, circuit descriptions and alignment instructions. NOW to the subject line of this message, I hope you'll share my amusement reading these excerpts from page 7 of the document:
"If difficulty is had in keeping the detector tube in its socket, a lead weight can be obtained through the distributor of Majestic Receivers. Unless the tube is weighted down, it is likely to be microphonic. Tubes in other sockets are likely to act in the same way but the detector will be the worst offender."

"If the detector tube "snores" or makes a "ripping" sound it will very likely be found that the tube itself is defective, the cathode of the tube being shorted to the filament."

Craig, et al,
These are the weights Majestic talks about to keep the detector from jumping out of it’s socket. They are all yours next time you stop by.
I consider it the electronic equivalent of putting a magnet on your gas line and thinking you’ve increased your gas mileage.
Sorry, can’t help you with the snoring and ripping sounds. You’re on your own there.
Bruce

The Early Television Foundation's annual convention is the last week of April (29th thru 31st) in Hilliard OH, and I'm going to be one of the presenters. Is anyone interested in sharing driving with me? Besides getting to hear me speak about Boosters and Converters, it's an opportunity to bring some old TV stuff to sell or donate, and/or to bring something back from their auction.

Please let me know as soon as possible!

Mark Nelson

PS: here's info on the Convention: http://earlytelevision.org/2016_convention.html

832. METALLIC DIAL CABLE

Yahoo group: NEARC_Radio
Date: 2016-03-17 18:42:05 UTC
From: craig.hardy@...
Topic: 832 Message: 832
Attachments: 1 described; binary payloads are missing from this source WARC

My 1928 Majestic model 71 dial cable was broken, tangled and mangled. Instead of the usual sturdy linen (?) cord, it's thin stranded metal. On a discussion board somewhere I found mention of Adams Manufacturing Co, in Lincoln Park, MI., and the person said they were good to deal with.

SO...they had the exact stuff I needed: 1/32" dia braided bronze (7 strands) for $1.89 per foot, and I ordered 4ft. Only 45 cents shipping.

Then I emailed them and said I had complete schematic and servicing data, but NO dial cord diagram, and would they perhaps have that?

Today the little envelope arrived in mail with the cord AND complete step-by-step Majestic dial cord replacement instructions with SEVENTEEN color photos!!!! I'm impressed.

The following was copied from the daily Tom Taylor Now E newsletter. Note the last sentance.
Ray

Is it too late to fix the AM band?
Some engineers privately think so, because of the rampant (and rising) noise level. It☐s created by everything from cellphones and tablets to fluorescent lights and power lines. Also car engines (That☐s why BMW says it isn☐t equipping its electric BMW i3 with AM). The FCC may be years late hopping on this issue, but it does have a rulemaking in progress and yesterday☐s deadline for comments produced a flood. The Society of Broadcast Engineers focuses on the ambient noise that plagues AM reception. It states the facts of life ☐ the FCC can☐t do anything about unlicensed Part 15 and Part 18 devices ☐past the point of sale,☐ and the agency☐s reducing its already-thin field staff. The SBE solution is basic ☐ the only ☐meaningful chance☐ to do something is at the manufacturer level. It urges the Commission to ☐create obligations on manufacturers, importers and dealers.☐ Otherwise, the group says ☐AM listeners have media options, and RF noise will make them exercise those options...they will simply utilize different media.☐ When interim Chair Mignon Clyburn announced the FCC☐s AM proceeding at the Orlando Radio Show (building on strong work by Commissioner Ajit Pai), the one idea most AM folks agreed on was giving them greater access to FM translators. The FCC☐s doing that. That provides daytimers with a nighttime signal and everybody a second place on the radio dial. But is the FCC ☐ and the industry ☐ up for more basic fixes? Read all the AM comments filed at the FCC here. You may☐ve noticed some radios have superior AM sound, while many don☐t ☐ the quality of design and manufacturing really matters.

Those repair colors that you melt in with a heated spatula work fine, but there's quite a learning curve. Years ago a friend had the art perfected and did scratch repair of damaged new products for a local appliance store--he had a flat rate of about $50 per repair and got all his new kitchen appliances from the store in trade!
A very gifted and unusual fellow: how many folks are you apt to meet in life who can completely rebuild a Steinway grand piano case, apply the 20 coat black lacquer mirror finish, re-string it, and THEN sit down and play all the Chopin etudes by memory, plus Beethoven, Mozart, et al?

Hi Craig,

I checked and they are 101 miles from me. Nothing in Maine. Maybe on my way back from Brookline I can stop there. Whatever I do, the hardest part will be to cut diagonal strips from the upper and lower trim.

Thanks,
Joe

BTW... here's some info about the radio...

These are the before photos. This is the way I found it in a rummage sale. No Tubes and the Vol/on-off control was missing. Radio Daze came through. I have everything else to restore it. As you can see, somewhat, the veneer is pretty bad. If you can resize the photo, you will see it. The convex sides are blistered. The top and bottom will need to be reglued. Aside from that, it's pretty nice. Reception is so-so on AM and as for SW, well you know there isn't much to get these days.
Tube complement is: 6SA7 Osc/Mod, 6SQ7 Det, AVC, 1st AF, 6SK7 IF Amp, 25Z6 Rectifier, 25L6 Output, K55B (W46773) Ballast Tube. The only schematic I could find was in Riders 12-10.

Whenever I get it finished, I'll send some more photos and I'll see about another article.

THE OTHER SOURCE OF COURSE IS: STRIP IT OFF OLD FURNITURE AT THE DUMP OR STUFF FROM FLEA MARKETS.
My source for walnut veneer lately has been what I stripped off an old Radiola I'd hauled home from dump 10-15yrs ago. Cabinet was beyond saving IMO, and I considered the radio and phono also too far gone and tossed it again after offering it free here on NEARC for month with no responses....

848. HP 606a Signal Generator Repair

Yahoo group: NEARC_Radio
Date: 2016-03-29 02:18:55 UTC
From: jfxg@...
Topic: 848 Message: 848

Hi All -

I received an interesting query on our Facebook site. A gentleman purchased an HP 606a signal generator that doesn't work. It blows the fuse whenever it's powered up. Does anyone in the group have any experience repairing test equipment that can offer any guidance? I don't think he has a manual or schematics, and perhaps he'd be willing to have it repaired, depending on cost. It's not a common request, but, with the range of experiences in the group, it can't hurt to ask on his behalf.

Thanks!
John

Hi John,

The manual and schematic can be found here:
http://bama.edebris.com/manuals/hp/606a/

Does it blow the fuse instantly? If so, I'd check the Power Supply rectifier diodes (1 bridge and 1 voltage doubler) and the electrolytic capacitors (a shorted diode can kill them quick).

Best of luck,
Alan

I work for Keysight, formerly Agilent, formerly HP. Not sure the service center would be able to help, but there is a toll free number to try for contacting both the service center and also the technical contact center to ask for help getting manuals, etc. It is 800-829-4444. It's a menu tree that you can follow to either the service center or the technical contact center.

851. Westinghouse W-342 motorized tuning

Yahoo group: NEARC_Radio
Date: 2016-03-29 14:20:08 UTC
From: craig.hardy@...
Topic: 851 Message: 851
Attachments: 5 described; binary payloads are missing from this source WARC

Interesting old set--love the big dial, and looking forward to using the motorized tuning!
There's no photo credit in the Radio Museum posting but I'm convinced this one I'm restoring is the same set--because of the exact grille cloth damage, and the position and number of missing and present dust caps on the preset buttons.
But that's neither here nor there. The main thing is I need some advice on HOW TO DO THE STATION PRESETS.
When the electrolytics get here from Joe I can do the re-capping and fire this beast up, but meanwhile I'm trying to figure out the motorized tuning arrangement!
This set saw a lot of damp storage and there's a lot of rust, but nothing damaging. The cabinet is still solid and doesn't need any re-gluing, but it does need total re-finishing (after which I'll be on the scrounge for a gold "Westinghouse" decal or gold dry transfer letters).

I've soaked down all the rusted areas and mechanisms with Seafoam Deep Creep for a few days, and I'm optimistic that all will work out OK.

Tested motor with external 6v supply and it was dead, but after making and replacing one of the brushes it ran OK.

NOW TO MY MAIN QUESTION: how are the station preset arms adjusted?
There's a screwdriver slot down inside each button, and the button shell has notches for a large screwdriver (see closeup photo), but suspect the adjustment is with the screw down in the hole--can't budge any of them yet, but letting them soak.

From my observations so far, I suspect the button preset might be:
1. Manually tune to station
2. Remove button dust cap
3. Using small screwdriver, loosen screw down inside button
4. Gently rotate button (probably CW) until it meets resistance
5. Tighten screw and replace dust cap

Photos attached.....

852. W342-motorized tuning--FIGURED IT OUT

Yahoo group: NEARC_Radio
Date: 2016-03-29 18:18:31 UTC
From: craig.hardy@...
Topic: 852 Message: 852
Attachments: 2 described; binary payloads are missing from this source WARC

Used a little more torque with screwdrivers and discovered the button preset sequence is the opposite of what I was suggesting before:
Loosen the outer shell, THEN turn the inner screw.

So I guess the button setting procedure is:

1. Manually tune to desired station.
2. Remove dust cap from desired button
3. Engage a wide blade screw driver on the now exposed notches and turn slightly CCW to loosen it.
4. Engage a small blace screw driver on the small slot down in the hole and turn CW until it stops.
5. Re-tighten button shell with the large screw driver and replace dust cap.

I suppose first the button should be pushed in before doing above steps, but won't know for sure until I have this beast back together and fired up....
The little contact arms have a conical shank with threads and small screwdriver slot on end, and they engage in the conical body of the button for the locking action.
I'd been soaking the assembly, assuming rust, but actually all surfaces were clean and shiny and I just hadn't been trying hard enough with screwdriver.

couple pics attached

853. W-342 motorized tuning--FIGURED IT OUT!

Yahoo group: NEARC_Radio

From: craig.hardy@...
Topic: 853 Message: 853
Attachments: 2 described; binary payloads are missing from this source WARC

Used a little more torque with screwdrivers and discovered the sequence is the opposite of what I was thinking--loosen the shell, THEN turn the little inner screw. So I guess the procedure is:
1. Manually tune to desired station
2. Remove dust cap from button you want to set.
3. Use a wide blade screwdriver engaged in the two notches of the button shell now exposed with cap off, and turn CCW just a little bit to loosen it.
4. Insert small blade screwdriver into button and turn til it stops.
5. Re-tighten button shell with wide blade screwdriver and replace dust cap.

The little arm has a conical shoulder which locks into conical hole of button shell.
I'd been soaking the unit, assuming rust, but actually the conical mating surfaces were shiny and clean--I just wasn't trying hard enough with the wide blade screwdriver.

ALSO, I guess the first step is to PUSH the button in before setting it.
I'll be able to verify that when I have it back together and running....

photos attached...

Topic: 853 Message: 855

Howie,Being retired, loving nostalgia, and having been a tinkerer all my life, this stuff is fun and comes easy for me!I would have been on it sooner but I did those three cabinets for Bruce in trade for some stuff, and then I wanted to do the Majestic cuz I'd had a working one as a kid and though my dad had taught me briefly about TRF vs superhet before I was 10, I had NEVER worked on a TRF. I was born in '41, and I remember our only family radio was a Kolster. Dad had built it into some bookshelves in our living room, but I remember the tiny dial window and the big row of tuning gangs.
I'm STILL curious about history of this particular Westinghouse--whatever you can tell me about how it wound up in your hands--since it's sort of "famous" now, being at Radio Museum on the web!
Info seems very scarce--I see nothing about the W-342 anywhere on the web, and almost nothing in discussion forums!
I just realized this afternoon that I can figure out more about the motorized operation BEFORE re-capping and firing it up by just spinning the drive pulley by hand and studying things.
It'd still be GREAT to find the original operating manual or instructions somewhere.
Just a final note you might enjoy: the replacement brush I put in the motor was from an Acura alternator--my youngest daughter's car over 15 yrs ago. My late father-in-law was a radio TV guy from 1930-1970 and in his stuff was a nice serviceman's assortment of brushes---but they're all the pure carbon type for higher voltage motors like food mixers and vacuum cleaners. This little 6V motor needed the sort of metallic looking type (mixture of bronze or brass with the carbon), so I save that type whenever I can for such occasions as this. The used Acura alternator brushes still had some size to them and I sanded and filed one down to fit this little 1938 tuning motor. Smallest "brush job" I can remember was a few years ago whittling a couple down to repair a Norelco electric shaver--those brushes are SMALL....

Hi Alan -
Thanks for this link! I'll pass it on to him. I get the sense from his description that the fuse blows instantly. I suspect you may be on to something; I've seen similar behavior with a shorted Selenium rectifier on a Telefunken.
I don't know whether he is able to repair this himself. In case this is out of his comfort zone, is this something you would tackle and I'd refer him to you?
Thanks,John

858. RUBBER and ALCOHOL

Yahoo group: NEARC_Radio
Date: 2016-03-30 04:26:26 UTC
From: craig.hardy@...
Topic: 858 Message: 858
Attachments: 2 described; binary payloads are missing from this source WARC

The tuning knob on this Westinghouse W-342 I'm working on has a rubber insert that no longer grips the shaft enough to tune the radio.
Had the same problem last year with a 1946 Stromberg Carlson. Simply making the shaft a little bit fatter with tape solves the problem of course, but this got me thinking about rubber parts we all wind up dealing with sooner or later--belts, idler pulleys, etc.
Of course we can't touch them with any of the usual petroleum-based solvents and cleaners unless the item is neoprene, which is very unlikely. It's too late when the part starts to turn to goo and you realize it was NOT neoprene....

SO....I always use ALCOHOL on rubber items. "Rubbing alcohol" from the medicine cabinet is OK, but that stuff is 30% water. SO, I use Dry Gas (that's a brand name, but you know what I'm talking about) which is 100% alcohol. HAS to be, because it's purpose is getting water out of gas tanks, etc. BTW, my PhD Chemist brother showed me how "Dry Gas" works about 40yrs ago:
>oil and water don't mix
>alcohol and water DO mix
>alcohol and gasoline DO mix
THEREFORE, alcohol dumped in gas tank mixes with water, and the alcohol-water combo mixes with gasoline, so now it all goes nicely down the fuel line. The water doesn't burn, but it passes through the combustion process and is gonzo rather than sitting in bottom of fuel tank to freeze up.

My brother's demo was simple: dump a little water into a clear jar of gasoline and watch it settle to bottom. Shake the bottle and wait a bit and the water settles right out again on the bottom. Now add some alcohol and shake bottle again. Water stays in solution and does not settle to bottom!

Now back to alcohol and rubber.
Charlie Skoolicas took the RCA course in 1928 to learn electronics, then operated Charles Radio & TV in Somersworth, NH for decades. Sold the first color TV in NH. His son George and I have been buddies for nearly 50yrs, and he told a trick his dad learned when working with rubber parts--especially phono drive belts: SOAK A STRETCHED RUBBER BELT IN ALCOHOL OVERNIGHT AND IT MAY SHRINK ENOUGH TO WORK AGAIN.

Now back to my original subject on the table. I'll leave the rubber knob insert full of alcohol overnight to see if it helps, but I'm not overly optimistic for this application. Of course super glue would make it grab shaft nicely, but then knob wouldn't be removable, so a little tape on shaft will be my likely "fix". A small amount of RTV might work, but I'd be fearful that it'd work TOO well and I might damage that 78 year old rubber insert next time I went to pull knob off. Photos attached....

But I thought I might as well share this little tidbit of info with all you fine folks!

859. Re: [NEARC_Radio] HP 606a Signal Generator Repair

The gentleman followed-up on this. Apparently the main fuse is not blowing. From his update:

it is not blowing the main power fuse, it is blowing the rf signal output fuse called the B+ fuse. I assume that as it turns on the power supply is ok. Normally I guess the fuse is in pace for over modulation of the output signal, butnI have idea if that is the problem or a failed component and no experience to test them or the modulation configuration

Anyone have any suggestions for him beyond what was already suggested?

Subject: Re: [NEARC_Radio] HP 606a Signal Generator Repair

The gentleman followed-up on this. Apparently the main fuse is not blowing. From his update:

it is not blowing the main power fuse, it is blowing the rf signal output fuse called the B+ fuse. I assume that as it turns on the power supply is ok. Normally I guess the fuse is in pace for over modulation of the output signal, butnI have idea if that is the problem or a failed component and no experience to test them or the modulation configuration

Anyone have any suggestions for him beyond what was already suggested?

Dear Mr. Phillips,
I heard about your organization last night on the radio. I didn't know who to contact about this so I'm writing to you. Maybe you can point me in the right direction.
I have a beautiful Grundig am/fm/short wave and phonograph console in beautiful condition. I would like to use it again but I think it needs tubes because it hasn't worked in 30 years. It is a very modern looking, sleek console, it is high-gloss walnut. I bought it in the 60's.
I live on Cape Cod, Ma. and I would like to know if there is anyone in this area that could help me get it working again. I would be most appreciative of anything you could do for me. Thank you in advance. Jeanne Paynter, Cape Cod, Ma.

If you can help Jeanne, contact her at: gryhndgrl1@gmail.com

There is a free Zenith 10-S-559 Console in Effingham, NH-pictures attached, First come-first served.
Phone and email contact info below
Bruce
****

Hi Bruce, The model # was right in front of my face 10-S599. And I'm attaching some photos. Please let me know if you receive them. I may have to use a different e-mail. Thanks again

Hi Bruce,
I am in Effingham, NH, about 20 miles south of Conway. My phone is 603-539-5905, I found this # on a silver plate riveted to the back of the radio power component. A255809. I hope this helps. Thanks, Greg

Gregory Tobin

Hi Mr. Phillips,
My name is Greg Tobin and I bought an old radio at an auction last summer. I jury rigged a cord on it and got power to it but no reception. Anyway I'm looking for someone who would be interested in it, for free. I would just like to know it's being preserved rather than tossed in the dump which is where it could end up if no one wants it. It's a Zenith, the radio has shortwave, police bands, aviation etc. and standard, It also has a turntable. It also has a "Zenith Rotor Wavemagnet" antenna. It's enclosed in cardboard which is in good condition and reads "rotate for best reception a Zenith plus feature". It is 38 1/2" tall, 33 1/2" wide, 16 3/4" deep and the cabinet is in pretty good condition. As I said I got power to it and static but nothing else. I was hoping it would work so I could keep it for my grandchildren who are only going to know MP3 players and Blue Tooth. So if you know anyone who would take it and preserve some history they are more than welcome to it. I don't know where I would get it fixed and I have other projects I need to get done. Thank you for your time and I look forward to hearing from you.
Thank you,
Greg Tobin

There is a professional in nearby New Jersey who rent tv's as props.

Buy sell rent & prop old B&W and Color TVs and Retrofit TVs with New Color screen.
http://www.harryposter.com/

No private collector should get involved with a video stage production company unless they are willing to take a loss of their set and get payment for the loss. You will get a standard contract with their boilerplate, kiss your TV good bye...

Harry does it all and is well prepared for any disaster to the equipment.

Best!

882. Texas Antique Radio and Tube HiFi Auction

Yahoo group: NEARC_Radio
Date: 2016-04-23 13:28:44 UTC
From: radioorphanage@...
Topic: 882 Message: 882

Hi Bruce,
I do not believe we have met, but please consider this an introduction of sorts.
I am president of the Vintage Radio and Phonograph Society located in the Dallas, Texas metroplex. I am also an auctioneer having concentrated my business in the area of collections over the last 10 years. As such, I have a sale coming up on April 30th that I think will be of interest to your NEARC members. I would appreciate it if you would pass along the sale information below. Thanks for your assistance.

_____Our next antique radio and audio auction will be April 30th and will feature the Les Sims Collection. This sale will include 350 collectible audio and antique radio pieces from the estate of Mr. Sims who was known as a collector and technician who restored high-end audio equipment like McIntosh, Marantz, Fisher, etc.

Check it out for yourself at www.sargentauction.com http://www.sargentauction.com/ Once there, you can scroll down to the link that will take you directly to the Auction Zip website featuring this sale where you will be able to see pictures of each item and bid live during the sale April 30th.

Be sure to let me know if you have any questions.

Jim Sargent, auctioneer
972-742-8085

886. HELP setting buttons on motor drive Westinghouse W-342

Yahoo group: NEARC_Radio
Date: 2016-04-25 03:12:33 UTC
From: craig.hardy@...
Topic: 886 Message: 886
Attachments: 5 described; binary payloads are missing from this source WARC

I've been restoring this 1938 Westinghouse W-342 console. It has motor drive tuner with FOURTEEN preset buttons. Actually, 13 are station presets, and one is for fast tuning with motor.

The electronic restoration was pretty straightforward: total re-capping got it working fine and hum-free, except on broadcast band I had to bypass the RF amp and clip antenna onto detector grid. Finally found and fixed that problem: broken #36awg wire inside the core tube of the "rf composite coil" for that band. Fortunately it was an easy fix--just solder the broken coil end to an adjacent terminal (amazingly unused!) on the coil form, and then run a jumper inside form to the original tie point.

To get the motor tuning working, I had to replace one of the tiny brushes, but I had a suitable one on hand to whittle down and it runs fine now.
Regarding setting station preset buttons I would welcome any HELP.
To quote an old friend back home in Maryland, "I don't understand all I know about this!"

From my observations, here's what I know so far, referring to attached photos:
1. When any of the 14 buttons is pressed in, it stays snapped in until any other button is pressed either partially or completely in--just like the push buttons on an old car radio--then it pops out again.
2. With no buttons pushed in, turning the far right brown control knob CW to the "electric" position causes the motor to run the dial around til it hits the end and flips a reversing switch and runs the other way to the other limit, reverses again, and so forth, cw and ccw, until brown knob is turned back to "manual" position to turn the motor off.
3. If one of the buttons is pushed in, turning the brown knob to "elec" position starts the above action again, but dial stops opposite the button that is pushed in.
4. Leaving the brown control in "elec" position and pushing another button will cause the the first button to pop out and motor drives dial to stop at newly pushed button. Depending on which way the motor was last running, it will go the shorter distance to newly pushed-in button, OR go to the end, reverse and come back and stop at the new preset.
5. The rotating dial plate has a slot with springy brass "ramps" on either side, and when it comes upon a pushed in button arm tip, the brass "ramps" push contacts on back side of plate, instantly stopping motor at that position. Dial is now "locked" in that position--motor is off, AND manual knob won't move the dial either.
6. Pushing in another button releases things and if "man-elec" knob control is still in "elec" position the motor will start and move dial to next preset. OR, if control is in "man" position, pushing any button partially with cause the pushed-in button to pop out so you can go back to manual tuning with the big central knob.
7. The BOTTOM (6 O'clock position) "red" button is different from the other 13 buttons. An arm on it pushes contacts that make the motor run. I think it's purpose is for fast tuning to a distant part of dial rather than make many turns on the geared-down tuning knob. Leaving that button pushed in and then using the "man-elec" control to intermittently run motor allows fast "rough tuning" around the dial.

OK, I'VE GOT ALL THE ABOVE FIGURED OUT BY SIMPLE OBSERVATION. NOW THIS ABOUT ADJUSTING PRESET LEVERS:
1. The preset levers are threaded into the button shells and lock with conical mating surfaces.
2. Two little notches on the front of button accept a wide thin-blade screwdriver (I'm using a piece of rounded-end hacksaw blade in a handle), and turning button shell CCW loosens the conical mating surfaces so little contact arm is free to rotate. After loosening, reaching into button with small blade screwdriver allows rotation of the now free little contact arm ccw or cw, then re-tightening button shell locks the conical mating surfaces again.

OK. I'VE GOT THAT FIGURED OUT. NOW HERE'S MY PROBLEM:
1. With the dial at a station I want to preset, I loosen the shell of the nearest button, and want to move the little rounded pin on end of preset lever to engage in the big slot with the brass ramps on either side, then lock it by re-tightening the button with my hacksaw blade screwdriver.
2. If the loosened button is pushed IN, I can't seem to put sufficient torque on the tiny inside screw slot to make the contact arm "snap" over the brass ramp into the slot--the spring action of the brass ramps is quite stiff.
3. With chassis out of cabinet it's possible to sort of "peek" down with good light and see things and maybe position preset arm while pushing in on button.
4. But with radio in cabinet and "working blind", I suspect there's some trick to rotating preset arm back and forth with tiny screwdriver in button, while slowly pushing button in and feeling resistance that pin is in the slot, THEN tightening button shell????

LASTLY, as I found this set, referring to my photo, you can see that some of the little preset arms are pointing out and others are pointing in. The "brass ramped slot" on tuning plate is long enough radially so that preset arm pins can engage in it whether in the "pointing in" or "pointing out" position. Right now I've assembled unit so all arms are pointing IN. Perhaps to allow preset of stations quite close together on dial the arms should be pointing IN and OUT alternately--not sure.

The documentation I've been using was free download of Riders Volume 12 pages "Westinghouse12-15, 12-16,12-17 and 12-18 which give me schematics, component diagrams and alignment info, but NO USER MANUAL STATION PRESET INFO.

I've been unsuccessful finding much of anything on this model--discussion boards, etc. except ADS for it on a newspaper archive site: Harrisburg Evening News Oct 4, 1937, p. 19.

I know that back in those days the radio dealer would set up buttons to stations requested by the customer, and maybe for this set is was one of those "see your dealer" deals, and not for customer adjustment, but I wasn't born until 1941, so I don't know about that....

FEW PHOTOS ATTACHED---MAYBE ONE OF YOU FOLKS CAN HELP!

887. Westinghouse buttons--ADDENDUM

Yahoo group: NEARC_Radio

From: craig.hardy@...
Topic: 887 Message: 887

Looking at my own pictures again, which are pretty much the "as received" condition, I've decided that the little preset arms should be set pointing alternately "in" and "out", to allow setting two stations close to each other on dial.

Although not specifically about communications receivers, this newspaper story has some nice photos of a radio repair shop that has been in operation since 1931 and is still in operation today.

Be sure and click on the slideshow button on the photo at the top of the story to see the other photos of the current repair area along with some older shots.

It looks like a pleasantly cluttered shop where one could enjoy a conversation with the owner:

Nobody has come back yet to my questions about this, BUT I HAVE IT FIGURED OUT NOW.

I had all parts clean and lightly oiled, but I took assembly apart again and carefully lubed all the preset arm locking conical surfaces AND the brass ramps on the rotating tuning disc with Lubriplate, and that seems to have done the trick!

Now, to preset a station button:
1. Pick the button nearest the dial pointer, loosen the button shell, and push it in.
2. The little tip of the swinging preset lever arm may or may not be locked into the slot between the brass ramps. If upon inserting small common screwdriver into the button and twisting back and forth, it won't move, then it's already engaged in the slot and the button shell can be re-tightened.
3. If not already locked in slot, twist back and forth with inserted small screwdriver until it "rides over the hump" and locks in the slot. THEN re-tighten the button shell and you're done.

It may take a couple tries to get the preset so that motor stops exactly on station. I've only set some BC stations so far, and suspect that this system may not be accurate enough to lock onto SW stations as well, since tuning is so much more critical for them. Of course the manual tuning knob won't move the dial until button is released (by partially pushing any other button to make it snap out), so you have to release the button if a little fine touch-up tuning is required.

But anyway, it's a pretty slick old arrangement that's FUN to use. (In first photo, I've just finished cabinet restoration, but chassis isn't re-installed.)

Hi All,

Can anyone help Jacki ?

Dear Alan,

I met Bob Fuerderer yesterday, but I'm not sure he's going to be able to help me with the matter I went to see him about (calibrating and understanding how to use an old Conar 255 oscilloscope). I was also hoping he might be able to fix a Kenwood KR-2600 receiver for me. But, he shies away from anything solid-state.

So, I asked him if he knew of any electronics gurus closer to me, as I'm in southeastern Vermont (Putney). He suggested I contact NEARC to find out if anyone knew of anyone near me. If you have any ideas, please let me know. (And, if you email me and don't hear back, please try again. I find that email is not always reliable.)

But, it just occurred to me that I have something that club members might be interested in. I wish that I could attend the May 21 meet to somehow show off my Electronics fabric design, however I'll be away at that time.

If you'd like to do some decorating around your passion or make a cool shop apron, check out my fabric print:

896. FREE: Pair of Juliette 9-transistor CB transceivers

Yahoo group: NEARC_Radio
Date: 2016-05-01 14:27:38 UTC
From: pacquerat@...
Topic: 896 Message: 896

Friends,

I was given this pair of transistor CB transceivers. I promised I would give them away to a collector, so here goes.

Pair of Juliette 9-transistor CB transceivers that operate from 6 AAA penlite cells each, they are on ch-14. The cases are gray wrinkle steel, no rust or noticeable dents, there is foam dust from the battery pack padding deterioration. It appears the chassis has been removed from each at one time or another, paint seals are broken. Leather cases are still supple, there are two small leather boxes I presume held earplugs but there are no ear plugs. There is also a long leather strap, possibly a shoulder sling but I did not unroll it to confirm. The original instructions, warranty card, shipping box 12" x 11" x 3", cover and sleeve are all present, a little soiled. I do not know if they work, I will not test them.

Image posting is not working for me in the group so go to my posting in ARC: Antique Radio Forums • View topic - Free for shipping: 2 Juliette 9-transistor CB transceivers http://antiqueradios.com/forums/viewtopic.php?f=15&t=299380&sid=c3abfb8aa26807f4f89ac8b9ca97e50a

IMHO I think these are a fine example of early portable CB technology and deserve a place in your collection.

They are being given away as is, as shown.

I will ship anywhere a medium USPS Flat Rate Box-2 will go in U.S.A. The "extra" amount is to cover my cost to drive to U.S.P.O.

I would like $20 CA$H, sorry, no checks, no Paypal, no money orders.

They can be picked up at my home for free in S. Dartmouth MA 02748.

Thanks!

Chas

I could do this, I recently did quite a few 3” tapes for a lady (they were letters back and forth to relatives in Europe during the 60’s), and everything is still set up.

There is some risk though that the tape could be fragile or stuck together (a few of hers were) and that they couldn’t be transferred

Howard,I have several reel to reel machines that I think still work OK. I'd have to think a bit on what to use for the destination machine--computer with audio in jack pehaps?Think all the CD machines I have sitting around are "play" only, and I've never messed with MP3 stuff.But if YOU have something for the recording part and if you came up here we could probably get the job done and while waiting for the recordings you could see my toys--radios, motion picture gear, etc.

I wasn't familiar with your RCA, but it looks like a beautiful clone of the Zenith Transoceanic and it's highly rated. I see mention that having the expensive(?) 1L6 is important for best performance rather than the 1L5 sub.In discussions I read that the SAMS info is incorrect and the orig. RCA service data is correct, though a little hard to interpret. If you don't already have it, I've attached it to this message.This fellow "Sparkbench" seems to have good info on the restringing also:THE SPARKBENCH - RCA Stratoworld 3-BX-671 dial

908. Nearc Help

Yahoo group: NEARC_Radio
Date: 2016-05-15 13:33:36 UTC
From: binkus102@...
Topic: 908 Message: 908

Greetings all:

I have had 2 folks reach out to Nearc this week.

1-Based on Cape Cod has a large Grundig that needs service. Apparently this woman has had someone look at it but he cannot help further. I beleive she is Bourne. It is large and would not be possible to ship this to service so it is a "house call"

2-A fellow from Western Ma. has contaceted me concerning a variety of test equipment belonging to his dad he is interested in moving.

If you are close to or of a mind to assist either of these folks simply contact me and I will connect you with the parties involved.

Thanks.

Bruce,
Good to see you working on your radios and using the NEARC Yahoo Group.

I've owned a few over the years. That 3-BX-671 is much classier, and a better performer in my opinion better than the Zenith Transoceanic sets.
To maximize it's performance you need a new or almost new 1L6 detector tube- particularly for Short Wave.
It will pick up AM even if the 1L6 is poor.
Check yours on your tester, and if it is not strong, let me know, and I'll send you a good one.

To the NEARC Yahoo Community,
Bruce is one of NEARC's newest members. He is an EE-PE who lives down on Cape Cod.
He is returning to the enjoyment of repairing Antique Radios after many years away from it.

Regards,
Bruce Phillips
President NEARC

Hi Bruce,
Thanks for getting back to me. WIth respect to the band-switch, I was able to figure out how to string it, although the band indicator is a bit off. (patience is a virtue).

With respect to the infamous 1L6, the one in my radio was weak, I had one whose getter was white indicating a leak, and so I ended substituting a 1R5. The AM reception is pretty good but from I what I understand a 1L6 would be a better choice.
I will take you up on your offer on the 1L6.

One final thing, I have two Motorola VT-73A 7 " TV's. I am toying with refurbishing them, but could be talked into selling them.

Bruce

911. supposedly simple guitar amp that has me stumped

Yahoo group: NEARC_Radio
Date: 2016-05-16 11:32:28 UTC
From: John Nowosacki
Topic: 911 Message: 911

Hi folks,
I'm trying to help a friend with his guitar amplifier (Carvin amp). It is relatively simple in design, with a 12AX7 feeding 4 6L6GC tubes.
I've changed electrolytic and coupling caps, measured all resistors and tested tubes, but there is only weak and distorted output.
The amp has a preamp output and power amp input, so I have been able to determine that all the preamp circuitry is now working fine, as I can come out of the preamp output into one of my amps and it plays fine. There is a power amp input that feeds the 12AX7, and the output of each side of the 12AX7 then feeds two of the 6L6GC's, which then go into the output transformer.
When I put a known good signal into the power amp input, I can't get anything but a weak output from this high power amp.
The control grid bias on the 6L6GC is down around -51V, and I think it should be up to more like -38V to 'turn on' the output tubes more than they are, but the range on the bias pot doesn't seem to be enough to get me anywhere near close enough to the -38V (if that is even where the bias should be. It's a really simple circuit, and everything I've checked seems to check out ok, but it doesn't work.
If I bring it to the event this Saturday, is there someone there who would be willing to take a look at it with me?
Thanks,
--

John, Sounds like you know what you're doing and are making all the right checks, but sometimes we can still miss the obvious which is staring us in the face: besides making sure the 6L6's are good, have you checked for off-value passive components--the resistors and capacitors in that output circuit? Also the "usual suspects" like poor solder joints, corrosion or carbon tracks causing a leakage to ground. And of course the output transformer(s) and speaker itself....

Just my two cents worth....

Craig

Thanks Craig,
I've measured all the resistors, and just plain replaced the coupling, grid bypass, and electrolytic filter caps. All tubes test very good on my tube tester. no open windings on the output transformer, but I don't actually have the specs on turns ratios or DC resistance. Speaker is good, as it is the one I used with my own external amp when I proved to myself that the preamp part of the circuitry is working. IF/when I find out what is wrong, it will turn out to be painfully obvious. I just wish it would hit me, which is why I think I'll bring it up to the show on Saturday. Must be much smarter guys than me there. ;-)

John, Sounds like you know what you're doing and are making all the correct checks, but sometimes we can miss the obvious which is staring us in the face: assuming you've checked/subbed the 6L6's, have you checked all the passive components--resistors and capacitors--for correct value? And of course the "usual suspects" like poor solder joints, leakage to ground somewhere, defects in output transformer....

Just my two cents worth....

From input from ARF members, it would appear that during WWII when automobile production for consumers ceased, there were excess car radios so the manufacturers put the radios in consoles.

Topic: 915 Message: 925

True...production of radios stopped roughly 42 to 45...because the material was needed for the war effort. However, auto radios were already made, cabinets were not needed for the war...so radio production continued with auto radios..presumeably until supplies were exhausted. One could specialize in collecting auto radio home radios.Dave & Karen Sutherland Echo Cove Group, LLC Ingenuity Country Store Mill Toy Works 41 Central Square Keene, NH 03431 Mail: PO Box 201 Spofford, NH 03462 www.ingenuitycountrystore.com

> Also, I just remembered--that's about like the car radio I put on my bicycle in the early 50's. That monster, plus the 6 volt car battery to run it made quite a load in my front basket, but by golly I was the only kid on my block with a bike radio! Plus, had to rig the big whip antenna also to have reception.

Hi Everyone,

Apologies for sending spam to everyone in the group. I inadvertently thought the newbie link I had was for posting and not the email list.

I am hopefully posting the equipment and pictures here I have for sale. The amp is a Clark Music CM 700 and the speakers are Clark also.

Aha! A film buff as well as an old radio nut, huh? Me too! I have dozens of cameras and projectors in all formats since about 1910. And over 75 Hollywood feature films I run for friends in my home theatre.
1924 Kodascope--I was surprised to note they had "auto thread" way back then. Attached photos look like yours?

Help is abundant on film forums, like:

JoeI pretty much have all the stuff I have room for (5 Zenith and Westinhouse consoles, a Crosley cathedral, RCA 9t tombstone and half dozen wood table models) but just went to see what it was all about.I got there at 6 and hung around til about 8:15 and snapped some pics. Even when I compress them the NEARC site doesn't seem to "like" much in the way of attachments, but with this regular email I CAN attach, so here they are.

Topic: 948 Message: 948
Attachments: 2 described; binary payloads are missing from this source WARC

OK Folks--could use some advice and help:
Decided I'm going to be on the scrounge for jukebox to go with my radio collection!
NOT the huge flashy type that plays 45's, but rather the older type that plays 78's. I don't have thousands to spend. Maybe 600-800, but preferably half that. Not working--just pretty complete and repairable.
Started looking on Craigslist last night, and just missed a 1942 repairable machine for 250.
Been doing a little reading: There are probably a quarter million of 'em out there right now. NEW ones being made that play CD's, but of course not interested in that.
If they'll attach, have a couple photos from web of what I'd love....
Those from the 30's are the most sought after and therefore most expensive, but if I could "luck out" and find one that needed wood repair like we do on radios, and electronics part would of course be easy.
If that seems impossible, I could settle for a newer one out of the 40's, so long as it was a 78 machine. I have hundreds of 78, and never collected or listened to 45's...

Craig,
AMI made 78 rpm juke boxes into the 50s.
That would be your best shot on a Juke under a grand.
Next time you are by, borrow my Always's Jukin' Guide to Jukeboxes.
It will give you enough detail to know what to look for.
If you don't get a response from the NEARC Group, put a WANTED ad on Craig's List (ME, NH, and MA).
The 78rpm boxes don't carry the demand of the 45 rpm boxes.
One will find you. Just remember, the average Juke weighs in at 300-400 lbs.
Makes a console feel like a tombstone,
Bruce

Bruce,Thanks! That's good news about 78's being less. No prob on the weight--remember I was dealing with players that average 750.I'll do your Atwater knobs and see you in couple days.
c.

I use my simple old photo editor and COMPRESS pics down to under 100k to get them to load onto this site, but still, if I try to attach more than just a few it sits there loading and re-loading (green "thermometer" moves across, the starts over with red thermometer, and keeps repeating and never finishes). Very frustrating ! With regular emai it's fast and easy.

I failed to take any photos until after the hall was closed down to set up for the music, but I did manage to take a few photos of the folks in the tailgate area near the end of the meet. They're on my web-site: <http://www.byan-roper.org/steve/steve-at-play/antique-electronics-and-2/nearc-spring-meet.html>

Best regards,
-Steve

965. Grille Cloth

Yahoo group: NEARC_Radio
Date: 2016-06-02 14:18:43 UTC
From: James Ligouri
Topic: 965 Message: 965
Attachments: 1 described; binary payloads are missing from this source WARC

Acquired this length of grille cloth over 25 years ago from a woman whose husband opened a radio repair shop circa 1928. The cloth is original and appears to be silk. Unable to associate the design with a particular make/model antique radio. Measures approximately 36 x 24 inches. Can anyone identify this grille cloth?

From: radioorphanage@...
Topic: 967 Message: 967

Can anyone identify this amplifier?
I don't believe it is a homebrew, but I find no information on the chassis.
It has Acrosound and Thordarson transformers, and GE "Book" Filter Caps..
The amp uses a 5V4 rectifier, 6SN7 preamp tubes, and has a pair of KT66s for output tubes, but I suspect the amp is earlier than the KT66s, and originally came with a pair of 6L6Gs.
Any help would be appreciated,
Bruce

"Comet into toothpaste consistency then use it like polish" ....WOW! That takes me back 65-70 years: my mom used Bon Ami that way for cleaning windows. Wiped it all over, let it dry to white, then polish off with dry cloth. Remember Bon Ami, with the little chick on the container and "hasn't scratched yet!" Comet IS more abrasive I believe. Think I learned in 10th grade Biology that those cleansers consisted of finely ground diatoms (algae with distinctive, transparent cell walls made of hydrated silica).

"clear coating"....hmm.....if that works for you, fine, but I'd hesitate to do that if you're talking clear lacquer. OK for wood, but on plastic you're now sort of "committed" to that coating. If it fogs or needs removing later you'd have to just "worry" it off with hot water and detergent because any solvent would attack the plastic.

Speaking of "out gassing" reminds me of a problem we had when I was an engineer at Clarostat. We silk screened conductive epoxy ink onto plastic substrate for the resistive element, then oven cured them and tested/sorted for value. One product line was the resistance element for automotive throttle position sensors (TPS's). We were supplying just the resistance element and the manufacturer (Ford, if I recall) molded the element into it's plastic housing. We were shipping good units, but customer complained they were off value.
Lot of head scratching til it was figured out: outgassing from the molding process was causing resistence change in the epoxy ink!
Sorry, I don't remember how the prob was eventually solved....

I like the warm soapy water and a toothbrush to clean, then armor-all to polish. If you have armor-all from, lets say, 20 years ago, the formula works much better than the newer formula. Also be sure to use a different toothbrush than the one you use for your teeth.

Henry's comment is the only one relevant to this specific problem. I've got a 1956 vintage Fisher console. You can clean the knobs, but the mold comes back in a year or two. Some decades and types of vintage equipment have their vulnerabilities: 1920's - pot metal disease; 1950's and '60's I.F. sections - silver mica disease; 1950's hi-fi equipment - recurring knob mold.

Would be nice to know if anyone has discovered an acceptable permanent solution.

Free- 1st come 1st served.
I am told by the sons of the original owner that this is a 5" Television built during WWII by an MIT Grad in the Navy so his group could watch the Army-Navy game. Also with it is a 1940 Dumont 208 Scope that I suspect is the 1/2 brother to the TV. TV Power supply and some parts are missing. Both items in untested, unknown condition.
I am 6 miles from the Hampton, NH toll booths.
Free- 1st come 1st served- Pick up only.
I will respond to post when item is gone.
Email or call 603 772 7516
Bruce Phillips

Two things to say. First, do not be concerned, ever, about making an acquisition from Howard. An asset to the club and hobby. Second, this radio and all associated models are fascinating and audacious for the time. The price that is being asked here is very fair. I would buy it myself in about one second if I could. It's a cultural marvel. Go for it.

Hi Art,
Sounds like those nasty piano keys are most likely the problem. Check to see that the AM receiving tubes (oscillator/mixer) are actually getting B+ when the piano key is pressed for AM operation. Sometimes that funky contact board that is supposed to slide back and forth when the keys are pressed fails to connect the B+ to the tubes.
I had this problem with one of my Grundigs in the reverse direction. I had AM but no FM. Turned out that the FM detector tube was not getting B+ in the FM position. I couldn't fix it properly due to the physical board material actually failing in the mechanism, so I had to 'hot wire' the B+ to the tube, thus bypassing the piano key operation.
Good luck

Hello NEARC Members,

I've come across a large collection of 78's at the Miles MemorialHospital Sale, near here, in Damariscotta, Maine. I can't possibly take inall of this, but I was wondering if any of you know of someone who would wantthem. All they are asking is a reasonable donation to the Hospitalfund (I was told that they are not looking for anything like a dollarfor each. Less of course)

I realize this may be a trip for you, but I thought someone mighthave have a contact who would want to travel. There are probably 200or more mostly 10" from the teens to the late 40's. If you know ofsomeone, have them contact me and I can pass on the contactinformation. There might also be some Edison Discs in there. Along with the 10" singles, there may be some 12" albums in there.

Someone is usually at the sale location (M-F) during the morning fromabout 8:00 till noon. The location is just off of Rt.1. We're about a 2 hour ride from the NH/ME I-95 bridge.

Regards,
Joe Devonshire

1018. GE K-64 cabinet/speaker

Yahoo group: NEARC_Radio
Date: 2016-06-19 21:06:46 UTC
From: John Nowosacki
Topic: 1018 Message: 1018

Helping a friend clean out the attic. Came across the cabinet and speaker (grille cloth torn, speaker cone wrecked) of a GE K-64. No chassis, just the damaged speaker and grille cloth in the cabinet. If anyone has a chassis and are looking for a cabinet to refinish to go with it, I can send pictures. Just don't want to see it go unused, and I think the radio, if complete, is worth putting back together.
Let me know.

From: apurkis@...
Topic: 1020 Message: 1020

Hello all,

I'm looking to id a tv/radio/phono from my past, with the ultimate goal of finding and restoring an example. I'll describe what I remember, but as it was almost 50 years ago my recollections my be inaccurate...

Manufacturer: Unknown...but I'm pretty sure it was a well known company, as I recall the name was familiar to me.

Description: Massive mahogany cabinet with 3 levels. Top level was the TV, which MAY have had a round tube. TV was enclosed by curved tambour doors. Middle level had two drop down doors. The left (I think) opened flat like a desk and had tracks so the 78 rpm phono could wheel out for playing. The right opened partially to reveal the attached AM (and FM?) tuner. The lower level housed the large speaker and record storage.

My guess is that this is a late 1940's or early 1950's piece.

I've searched the usual places online without success...any information or ideas would be much appreciated...Thanks for your time.

Actually, this is just a solid state portable radio – a very nice one, no piano buttons here.

I'm pretty sure that your comment does apply to a KS610U that I have here, phono works on this one but nothing else, and it does have that nasty switch rig.

Thanks for the response, Art

Subject: Re: [NEARC_Radio] Grundig Satellit 700, No AM

Hi Art,

Sounds like those nasty piano keys are most likely the problem. Check to see that the AM receiving tubes (oscillator/mixer) are actually getting B+ when the piano key is pressed for AM operation. Sometimes that funky contact board that is supposed to slide back and forth when the keys are pressed fails to connect the B+ to the tubes.

I had this problem with one of my Grundigs in the reverse direction. I had AM but no FM. Turned out that the FM detector tube was not getting B+ in the FM position. I couldn't fix it properly due to the physical board material actually failing in the mechanism, so I had to 'hot wire' the B+ to the tube, thus bypassing the piano key operation.

Good luck

Hoping the photos make it through -- a gent contacted me earlier to ask if I was interested in an old cabinet radio, which turned out to be just the cabinet itself with clock (no turntable or electronics). Apparently the cabinet is in great shape, but I'm not interested. If someone else is, the guy's contact info is below. He's just over the NH border in the South Hampton area.

cheers,

Dick Joltes

1031. condenser leakage tester question

Yahoo group: NEARC_Radio
Date: 2016-07-04 13:30:15 UTC
From: John Nowosacki
Topic: 1031 Message: 1031

I picked up an Echlin TE400 Condenser Leakage Tester at a flea market yesterday. It seems to consist of a transformer, a Type 71A tube, a bulb of some sort, two probes, and a capacitor (ironically) in the circuit. I'd like to try this out for testing leakage of capacitors, but figure the capacitor in the tester itself should probably be changed first.
Problem is, the only marking on the unit says "15" in two places on the brown cardboard wrapper. Not .15, not 15mfd, nothing but a '15' in the two places. No marking of polarity, so I don't believe it's an electrolytic. It's rather large (thumb sized cylinder). I haven't been able to find any schematic info on this piece of test equipment.
I believe it was designed for testing condensers for automobile ignition systems, but don't see why it wouldn't work for leakage tester on any other capacitors. Looks cool on the bench, but I'd like to try it out after figuring out what the '15' means and then changing it out with something new. Any comments/ideas appreciated.

John,

Yes, it will work fine for automotive, (vintage) condensers but its use is very limited for radio condensers of any era. FWIK, most auto condensers were 400 volt, thus limiting the leakage range to those radio caps.

The '71 is likely wired as a HV rectifier, the unknown cap, a filter. Assuming you have no capacitance bridge to evaluate the old cap. With a source of 100 or more volts and a mill-ammeter the amount of leakage current can be determined by lifting one lead and connecting to the source. Note which lead of the cap. is wired to the filament circuit of the 71, this will be positive. Charge the cap to say 200 volts. Discharge the cap. via a shorting lead some 30 seconds after removing the charge. There should be an audible and visible snap in the discharge spark. To determine the leakage current use a (overload protected) vom set to 100 ma in series with the cap, charge using same 200 volt source via the vom, as the current settles lower the range on the vom to 10ma. Being an old cap I suspect you will see some 3-4 ma leaking.

I suspect if the number 15 represents the value likely 1.5 mf. Small amount of filtering is used so 15 mf would not "fit" into that size considering the era of the 71 tube. The OEM cap just knocks the top off of the pulsating DC to keep the measuring circuit quiet.

IMHO the tester really is not suited for reasonable analysis of raio caps. I suggest either of the two Heat-kit models IT-11 or 28 both are similar. There are others, Aerovox made a rather flexible one. Solar Sprague and such.

Over the years I have repaired radios, using a bridge to find an unknown value is important, leakage on micas in critical circuits and leakage on not too old electrolytics. All of which require a range of test voltages and preset parameters for leakage.

great info, thanks. I do have a number of old cars that still use points/condenser setup, and it looks cool, so I will probably use my DVM which has a capacitor setting to try and measure the actual value. I just didn't know if it was an electrolytic (polarized) or not. It has no markings other than '15' (no + or - indication, but I think I can figure that out by looking at the wiring convention).

Subject: Preliminary Announcement- Auction - Terrey Collection of Vintage Radio

Preliminary Announcement- Auction - Terrey Collection of Vintage Radio

Dear Fellow Collector,

The late Dr. Much now stated, "As collectors, we truly are temporary "caretakers" of these historical artifacts."

After spending 50+ years to curate a collection of nearly 1,000 vintage radio items, I have decided to move them on to new "caretakers."

On Sunday, September 18, 2016, there will be the first session of a two part auction. The auction will be on site at The Barn in Carlisle, Mass., the home my vintage radio collection. A preview and BBQ reception will be held on the Saturday afternoon and evening before, September 17. The second session probably will be held in November.

I am "broadcasting" this to my friends in the collecting community using nearly every email that I can find in my radio-related email correspondence. Today's cyber-technology provides instant communication to all.

Please email if you do not want to hear any more about this event. Also, I apologize for duplicate emails to you. Email me for the one you prefer.

A web site and email has been set up specifically for this event: http://www.terreyauction.com http://www.terreyauction.com/ info@terreyauction.com mailto:info@terreyauction.com

I hope to see many of you in September. Please come and enjoy the get-together .. even if you don't plan to add to your collection. Or, visit before the auction to see the collection before it is disbursed (however, please email to coordinate your visit.) And, feel free to share this information with your fellow collectors.

Happy Collecting!

John Terrey

1042. Help- Wanted- Small Black Knob for Emerson 540 Radio

Yahoo group: NEARC_Radio
Date: 2016-07-10 18:06:01 UTC
From: radioorphanage@...
Topic: 1042 Message: 1042
Attachments: 2 described; binary payloads are missing from this source WARC

I need a black knob with the small extension on the back for an Emerson 540 radio.
I have plenty of the same knob with the clip for a "D" shaft, but I need one with the extension on the back as shown in the 2nd attached picture.
Can you help?
Thanks,
Bruce

Bruce: There are guys out there making replica knobs by plastic molding of course, but NOW it's something a clever and enterprising person might do with 3D PRINTER!

Don't know much about them, except the headlines couple years back about the fellow making plastic gun that could slip through metal detectors.

My very techy neighbor across the road got one recently. Haven't seen it yet, but his wife mentioned he'd made her a replacement spout for her watering can, complete with the threads.

Lot of planning and setup time i'm sure, and I wouldn't be inclined to ask him for the knob cuz he's out straight with many projects all the time. He was a tech for Lucent in Andover for 18yrs before they closed, then for many years has been self employed doing silk screen printing and then "pad printing". In his "spare time" he's finally building a miniature steam railroad around his property: his father had acquired engines and cars and some track, and then John has acquired more track and components plus stationary steam engines and stuff of every description. And now he's just gone full time engineering with TurboCam in town.

But someone in NEARC might want to get into 3D printing of these knobs and things for old radios, phonos, etc.?????

From: Dick Joltes
Topic: 1046 Message: 1046

All,

I have an opportunity to pick up a floor model American Bosch unit, likely model 405, for short money. Cabinet is a bit rough, but allegedly the unit powers on (though it scares me that the owner did so in the first place) with no output. What's the general consensus on these sets? Worth the time and effort? What about parts availability?

Any suggestions/info appreciated.

Thx,

Dick Joltes

William,

Have you tried Purple Power Cleaner / Degreaser?
http://www.purplepower.biz/purplepower_industrial_strength_cleaner_degreaser.html

I think I got it at the local auto parts store. Hardware stores may have it. I haven't tried it with mouse urine, but I have found it useful to get off some "real gummy stuff." It will probably take off any printing / stenciling on the chassis. Just be sure to thoroughly clean what you apply it to. I used it on a SX-42 to get some stubborn stuff off. Something that also works is toothpaste. I like to use Arm & Hammer and scrub away with a toothbrush. It could be the baking soda helps with deodorizing. I can't attest to which variety works better.

William,

That's too bad! Is there any chance you could rivet some patches to the chassis? I can't think of anything else you could do. Is the case as bad as the chassis? Sometimes you can do some pretty good body work to save it.

Spray it down with something aromatic like WD-40 or contact cleaner---good for everything electrical, prevents rust, and should cover any smells thoroughly!

It doesn't appear to have a balance control, so I suspect it doesn't do stereo.

Does it have a model number on it somewhere?

Does it have a connector for an external speaker? I didn't see one in your photos.

Best regards,
-Steve

No, it seems to only have a phone/tape 5-pin input. I'm not sure what the dipole plug above the ground does, but I think that's just for the antenna.

1065. Complete Set-Riders 1-23 (Rare) for $100 in Worchester, MA

Yahoo group: NEARC_Radio
Date: 2016-07-18 19:31:04 UTC
From: radioorphanage@...
Topic: 1065 Message: 1065

Donald Reid of the Ben Franklin Bookstore is offering a complete set of Riders (1-23) for $100 firm.
The volumes after 18 are pretty rare.
He will not break up the set.
First come, first served.
I've seen people pay more than $100 for just Volume 23.
The Ben Franklin Bookstore is on the 7th floor at 50 Portland St. Worchester.
Donald can be reached at 508-752-3239.
If you buy these, please post to the group so we know they are gone.
Bruce

1068. WJIB/WJTO

Yahoo group: NEARC_Radio
Date: 2016-07-18 23:50:45 UTC
From: binkus102@...
Topic: 1068 Message: 1068

If you enjoy these stations in Maine or Boston you may wish to support them. WJIB AM 740 is the only music AM sation left in Boston. I know they are listner supported and if you like it you may want to donate.

I benefit in no way other than getting to listen, I let you know as they are behind this year in fundraising. You can google up the facebook page for more details or listen for address to donate to.

WJIB is in Cambridge MA. WJTO is in Bath Maine. They are trying to start beautiful music station on FM in Boston this year.

Regards.

Paul Buresh

1069. Help: Need Contact info for Chris Cuff

Yahoo group: NEARC_Radio
Date: 2016-07-19 14:42:35 UTC
From: radioorphanage@...
Topic: 1069 Message: 1069

I'm looking for contact info for Chris Cuff.
Chris was an early member of NEARC and an avid Transistor collector in the early days with me and Marty.
He use to live in New York, but I believe he lives in Connecticut with or near Walter Breed now.
Walter and Chris always have a table together at Kutztown, but I'd like to contact Chris before Kutztown.
If you can help me call 603 772 7516
In a reasonable attempt to no publicize contact info, please Do Not post his info to the site.
Thank you,
Bruce Phillips

1070. Re: [NEARC_Radio] Re: NordMende Spectraphonic

Yahoo group: NEARC_Radio

From: <jfxg@...>
Topic: 1057 Message: 1070

Starting from roughly the late 50s, German radio extension speaker connectors use a 2-pin DIN connector, which is not present on yours (note that it doesn't have to be a stereo to support an extension speaker with monaural sound). The 5-pin DIN connector on the back is for an input source. You can purchase a 5-pin DIN to 3.5mm RCA jack to play your iPhone/iPad/Kindle music through your radio.

I seem to recall seeing variants of your Nordmende with a second speaker, likely an upper end model of the line.
Yours is quite a nice radio. Enjoy!
-- John G.

Subject: [NEARC_Radio] Re: NordMende Spectraphonic

  Thanks all. This is one of my favorite radios. The push buttons and solid sound made me think it might have power for more speakers. I'll leave it as-is and enjoy.

THANKS,
MW

John,
Thank you. Ian has already sent Chris a request through Facebook for me.
I guess I need to get into the 21st century and join Facebook.
But then it’s Twitter and a bazillion other pieces of social media, and then I won’t have time for anything but posting pictures of me going to “The Mall”.
I think I’m good (everybody), but thanks again for the offer,
Bruce

I have an S-47 parts set which would only cost you a trip to Paxton, MA. The S-47 was an entertainment version of the SX-62, AM, FM and two or three short wave bands. Many parts are similar or the same. The 455 kHz/10.7 MHz IF cans carry the same part number for instance. The chassis lay out is similar but I can't guarantee that it is the same. If interested please let me know. In the meantime, I'll check to see if anything is living in it. 73, Steve, K1WGN

1084. Philco model 70 grandfather clock radio

Yahoo group: NEARC_Radio
Date: 2016-08-07 02:26:58 UTC
From: craig.hardy@...
Topic: 1084 Message: 1084

I just picked up one of these today, and two cosmetic items are missing:
The escutcheon for the dial window, and the round wooden thingy for the very top of cabinet.

I could turn the wooden item on lathe, but the escutcheon would be much more of a challenge for me to make, so I'm on the scrounge for one of those!

Craig Hardy
Barrington, NH.

Here is something unique. These cabinets for the Sparton Triolian were made by Schuster's of Milwaukee and occasionally came with a different chassis. This one has a 13 tube Wells-Gardner beam of light chassis. I'm asking $125 for it but open to offers. It appears to have been a high quality set in its day with twin speakers and 6L6 push pull output. Needs grille cloth.

Department of Justice

Office of Public Affairs

FOR IMMEDIATE RELEASE

Monday, August 22, 2016

Three Companies Agree to Plead Guilty for Fixing Prices of Electrolytic Capacitors

Rubycon, Elna and Holy Stone Are Latest Companies to Plead Guilty in Ongoing Investigation
Rubycon Corporation, Elna Co., Ltd. and Holy Stone Holdings Co., Ltd. will plead guilty for their roles in a conspiracy to fix prices for electrolytic capacitors sold to customers in the United States and elsewhere, the Department of Justice announced today.
“The Antitrust Division has now charged five companies and one individual for their participation in this international price-fixing conspiracy,” said Deputy Assistant Attorney General Brent Snyder of the Justice Department’s Antitrust Division. “The electrolytic capacitors conspiracy affected millions of American consumers who use electronic devices containing capacitors every day.”
Electrolytic capacitors store and regulate electrical current in a variety of electronic products, including computers, televisions, car engine and airbag systems, home appliances and office equipment.
The division filed one-count felony charges against each of the three companies in U.S. District Court in San Francisco today. In addition to pleading guilty to the charges against them, each company has agreed to pay a criminal fine and cooperate with the division’s ongoing investigation. The plea agreements are subject to court approval.
Previously, NEC TOKIN Corp. and Hitachi Chemical Co. Ltd. pleaded guilty to participating in the same worldwide conspiracy. NEC TOKIN was sentenced to pay a fine of $13.8 million in January 2016, and Hitachi Chemical was sentenced to pay a fine of $3.8 million in June 2016. On March 12, 2015, a grand jury indicted Takuro Isawa, a former Global Sales General Manager for one of the capacitor manufacturers, for his alleged participation in the conspiracy.
The charges today results from an ongoing federal antitrust investigation being conducted by the Antitrust Division’s San Francisco Office and the FBI’s San Francisco Field Office into price fixing, bid rigging and other anticompetitive conduct in the capacitor industry. Anyone with information on price fixing, bid rigging or other anticompetitive conduct related to the capacitors industry should contact the Antitrust Division’s Citizen Complaint Center at 1-888-647-3258, visit www.justice.gov/atr/contact/newcase.html or call the FBI tip line at 415-553-7400.

I see "Gardner" in parentheses so that may be Gardner, MAThere certainly is a lot of stuff, but if you study the pics there's not really that many wooden radios, and you can see a couple of the tombstones are empty cabinets.Certainly worth the hike though if your radio collection needs enhancing!Looks like a lot of test equipment also....

I would answer the ad. Seems the fellow has no exit strategy for the detritus of "his business" and is unwilling to take the loss and write it off. Considering this is a sole proprietorship, the waste could be donated to a 501c3 museum. The stuff would be gone and the donation deductible from the biz taxes, then again... Seems others who either provide services for old electronics or resell refurbished equipment are surviving. To be at the point of liquidation would indicate poor business practices, issue with health, or unplanned expenses.

Here again, is a good example of why collector organizations should become 501c3. Certainly simplifies the end point of all collections and that is to be re-dispersed. Thereby giving organizations the chance to remain inexpensive to their membership, provide a service, grow to, at some point to have a brick and mortar location that could actually support a visitor center. It has been done and is currently going on.

I don’t read Tom Taylor NOW, the daily radio newsletter every day but today noticed the following:
The name “CBS Radio” will be gone, replaced by some other name yet to be determined as CBS splits off its radio business.
Charles Osgood is retiring after 22 years with his Sunday morning CBS TV show. Charles is 83 and was inducted into the Broadcasters Hall of Fame at InfoAge several years ago. A real gentleman.

1116. Atwater-Kent 55 tuning knob

Yahoo group: NEARC_Radio
Date: 2016-09-08 04:21:50 UTC
From: Dick Joltes
Topic: 1116 Message: 1116

Hi all

I just picked up a nearly pristine #55, with floor cabinet, for free (!) and am having an initial look at it. First issue is that the rubber bushing/wheel on the tuning dial spins freely. Was wondering if anyone knew offhand whether these were originally friction fit (and where I can find a replacement) or if they were glued on.

Unit is dusty and in need of a full rehab, but appears complete. Speaker intact; cabinet will need a lot of restoration.

Thanks,

Dick Joltes

1117. Re: [NEARC_Radio] Atwater-Kent 55 tuning knob

Topic: 1116 Message: 1117

use a piece of 3/8 rubber automotive fuel hose. cut it just the length of the shaft on rear of the knob.it will fit snug (no glue req.) I've done this a couple of time & works perfect.

I've had a Hudson car radio from the dump sitting here on a shelf for at least 20yrs. I have a NOS vibrator in my tube supply boxes, but don't know if it's still good, so, SURE bring 'em along. I noticed awhile back Joe Cocco did a nice car radio restoration, so maybe if he's still into that he's like some too.All my attention this summer has been on juke boxes rather than radios. Got first one--1939 Seeburg Classic--going nice, and almost done with a 1946 Seeburg 146 ("trashcan"). Great sound from the Classic with 2A3 push-pulls, but even better knock yer socks off sound with the 6L6's in the trashcan! I DID pick up one more radio--a 1931 Philco grandfather clock radio--but that's a small project that waits til done with the big jukes.....

From: k8zhd@...
Topic: 1127 Message: 1127

I have Rider's TV manuals that I'd like to donate to a good home or homes.
I've got the large ('folio') size volumes 2, 3, 4, 5, 6, 7, 8, 10, 11, 12, 14, 15, 16, 18 and the smaller 8x10 size volumes 1 and 2.

These cover just about all the early TV sets through the mid-1950s.

I can bring these to Brookline (along with the two carloads of radios etc I'm selling) if someone wants them. Let me know by Friday afternoon.

email me; aj2x@comcast.net

From: Joe George
Topic: 1130 Message: 1132

I came across this Arkay FM-8 tuner, pics attached. It's mono and I replaced 2 tubes and it came right on. Have the build manual and schematic. Looks to be mid 1950's?

I don't drive to shows but if you want it email me and we can try to get it to you somehow.

Joe

Hi Bruce,
Was not planning on being a vendor at Brookline, but I have a Stromberg Carlson stereo amplifier, and a Harmon Kardon stereo receiver that are both tube amps, plus a few mono Magnavox and Motorola tube amps if you're interested. Most have been recapped in the power supply and/or coupling cap stages and resistors measured so bias is correct, but they're not very expensive. Could sell or maybe trade?

1135. Bakelite restoration

Yahoo group: NEARC_Radio
Date: 2016-09-25 22:36:31 UTC
From: TrainBee
Topic: 1135 Message: 1135

I've been working on a Bakelite radio case for the last week or so. The Bakelite is a marble brown composition. It was very "grungy" but cleaned up well with some Dawn liquid soap and water. I've been working with various plastic cleaners including Novus. Recently I tried Brasso with no real improvement. I am getting it to a little better than a satin finish. I have a small area that shows that the cabinet originally had a high gloss finish.

What I'm trying to find out now is can this former finish be reproduced? Am I at the point of best effect or can a clear finish be put on it? There are no soft spots on the case and no cracks.

Thanks in advance.

Brasso IS a nice mild polishing agent. From a tip on the web I discovered it's GREAT on ivory piano keys. Few years back, with a lot of elbow grease and about 80hrs of work I nicely restored the keys on our 100 yr old Henry F. Miller grand.Using it on Bakelite sounds like a good idea--just keep at it with the elbow grease!Re a clear coat, if you tried clear lacquer I'm not sure if you could safely remove it if you wanted to start over---you could test on bottom of cabinet if acetone or lacquer thinner dissolves Bakelite. If so, then perhaps spray on shellac. Shellac is alcohol based and I'm pretty sure alcohol wouldn't touch the bakelite if you needed to remove and start over.How about power buffing the Bakelite, like with brass--using white or red rouge on buffing wheel? Just checked online. Brasso with elbow grease and/or power buffer seems like I was guessing right. Here's the complete handy dandy "instructable":Restore Bakelite to Original Finish

Hi Craig,

Sorry I couldn't make it to your seminar yesterday. I'll e-mail you about another matter later. I've tried the Brasso several times. It's not getting any better. I did get a suggestion to rub on some 3-in-1 Oil to build it up. I'm not sure I want to go that route just yet. The other thought I had was to rub on some ArmorAll and build that up. I'll have to check the chemistry first on that.
One thing I've read in multiple sites, is to avoid petro based waxes. Natural wax is the only recommended wax for bakelite.

Thanks.

Joe

Hi Folks, I know a guy who used to come to the NEARC meets years ago. He used to sell a specail bakelite polish that worked like no other polish I've used. I am trying to persuade him to produce it again.It seemed expensive because it was only a 3 or 4 oz bottle for $11.00, but you could do a dozen or more radios with it. I polished my Fada bakelite radio with it over 18 years ago and it still looks great.(when I brush the dust off!!) He wouldn't get specific with the formula but he hinted that it was a mixture of mineral spirits, wax and a very fine abraisive. I'll keep you posted if I can get him to mix up a few bottles. I told him I'd pay $25.00 for a bottle if he'd produce it again!!! 73 Ross W1EKG

I remember reading that dishwashing liquid and water was bad for cleaning bakelite.Most of what I read in the past indicated that the original finish is very thin and once it was gone that was it. I have tried a few things over time and never found anything that would bring a bakelite finish back to what I imagine it looked like.The best luck I have had was using the Novus products and elbow grease. That said likely no two cabinets are the same. Good luck and please keep us all posted.
Henry

1145. SEEBURG SELECTOR COUPLING SHAFT

Yahoo group: NEARC_Radio
Date: 2016-09-28 02:59:11 UTC
From: craig.hardy@...
Topic: 1145 Message: 1145

This message is to the person I was talking to outside at Brookline, standing by the RCA 9T, who knew about Seeburg trashcan jukes.

I was talking about restoration of my Seeburg 146 "trashcan" and that the coupling shaft between the helix and the solenoid stack down on the control chassis was missing, and that I simply have to put flats on a length of 1/4" rod stock to make the replacement.

You mentioned to me that there is a WEIGHT on the shaft, purpose unknown.
Looking at the pictures in the 359 page .pdf service manual I downloaded, sure enough there's what looks like about a 2" x 2" cylindrical weight setscrewed to the shaft at about it's midpoint!

I was making up the shaft this evening and now am pretty sure of the purpose of that weight--it's just to make sure shaft stays seated in the lower coupling.

There are no set screws in the couplings---just spring loaded balls to provide some friction or perhaps snap into a dimple on the shaft.

I'm making the shaft about an inch longer than needed to engage in the upper and lower couplings, and making the flatted section that much longer on one end.

SO....to install, I'll slide the longer flatted end up into the helix coupling until lower end can engage the lower coupling, then lower it into bottom coupling. I'll make a lead weight, which I guess will make sure shaft does ride up out of the lower coupling.

So, whoever you are, thanks for the tip, and now the mystery is solved!

Craig Hardy
Barrington, NH

1146. FOR SALE: 959 Drexel "Profile" Motorola Model SK33 console

Yahoo group: NEARC_Radio
Date: 2016-10-01 18:32:40 UTC
From: jfxg@...
Topic: 1146 Message: 1146

Hi All -

I received a posting on our Facebook site from a gentleman who wants to sell a 1959 Drexel "Profile" Motorola Model SK33 console. Some snippets from our conversation follow:

It does in fact work. I need to get a small piece for the head of the turntable arm that holds the needle. Its in beautiful condition, own by my grandmother and then given to me. Tuner and turntable work, all original speakers. There are some minor scratches on the top. I'm not skilled at refinishing and wouldn't want to ruin it. I found a similar one in Craigslist being sold for $2500 https://www.facebook.com/NewEnglandAntiqueRadioClub/messages/?threadid=583700855&timestamp=1475203000564#. I was asking the other person for $1700 https://www.facebook.com/NewEnglandAntiqueRadioClub/messages/?threadid=583700855&timestamp=1475203000564#. I have no other point of reference for the value though. I have many photos plus a video of the tuner playing and the turntable spinning. I'd love any advice on pricing. My email is davidrparadis@gmail.com. thanks so much for your reply and assistance!

Not serviced to my knowledge. Its incredibly loud. I've only out the volume up to 5 as I'm afraid to blow any of the speakers. When you turn the volume or tune the radio, there's some static in the speakers but once in a station, it's beautifully clear. The tuner also lights green behind the display when a station is in tune. Regarding the surface, yes, it's in great shape. The scratches I refer to are quite superficial as well. And it is big, hence the reason I'm looking to sell. We just don't have the room for it and don't really use except for at Christmas time. It's a bit of a novelty to tune it to all-holiday music in Christmas Eve.

Here's a link to a video of it working:
https://drive.google.com/file/d/0B2MxKF9w87hWdjl2cnV1WHhveEU/view?usp=drivesdk
https://drive.google.com/file/d/0B2MxKF9w87hWdjl2cnV1WHhveEU/view?usp=drivesdk

---

I've solicited photos from him. I'm having problems uploading them to our Yahoo site; I keep getting an error which is also preventing me from uploading the Fall event photos (GRRR!). So I've created a Facebook album of the photos for the time being. I'll try to re-post the photos later on this site. The link follows (note that you don't need a Facebook account to view these).

It looks to be in great, original condition - well worth finding a home for this. I'm not sure it will command the asking price, but you'll be hard-pressed to find a nicer one. If anyone is interesting, please contact David, who lives in Auburn, MA.

Enjoy your week-end, everyone.

John Gibbons

1147. Re: [NEARC_Radio] FOR SALE: 959 Drexel "Profile" Motorola Model SK33 console

Nice unit, but not sure where those big prices are coming from. I have two similar models, both working fine, that I got for free from town recycling center "swap shop". Use one for reviewing disks for my jukes, and other one gets used like the fellow says---Christmas time. Put a stack of classic Christmas LP's on while decorating the tree, etc....

Subject: [NEARC_Radio] FOR SALE: 959 Drexel "Profile" Motorola Model SK33 console

  Hi All -

I received a posting on our Facebook site from a gentleman who wants to sell a 1959 Drexel "Profile" Motorola Model SK33 console. Some snippets from our conversation follow:

It does in fact work. I need to get a small piece for the head of the turntable arm that holds the needle. Its in beautiful condition, own by my grandmother and then given to me. Tuner and turntable work, all original speakers. There are some minor scratches on the top. I'm not skilled at refinishing and wouldn't want to ruin it. I found a similar one in Craigslist being sold for $2500. I was asking the other person for $1700. I have no other point of reference for the value though. I have many photos plus a video of the tuner playing and the turntable spinning. I'd love any advice on pricing. My email is davidrparadis@.... thanks so much for your reply and assistance!

Not serviced to my knowledge. Its incredibly loud. I've only out the volume up to 5 as I'm afraid to blow any of the speakers. When you turn the volume or tune the radio, there's some static in the speakers but once in a station, it's beautifully clear. The tuner also lights green behind the display when a station is in tune. Regarding the surface, yes, it's in great shape. The scratches I refer to are quite superficial as well. And it is big, hence the reason I'm looking to sell. We just don't have the room for it and don't really use except for at Christmas time. It's a bit of a novelty to tune it to all-holiday music in Christmas Eve.

Here's a link to a video of it working:
https://drive.google.com/file/d/0B2MxKF9w87hWdjl2cnV1WHhveEU/view?usp=drivesdk

I agree. He has more or less admitted to not knowing its market value. My sense is that he'd be open to offers, even if they are much less than he'd like. I've seen so many radios on Craigslist or Ebay that are unrealistically priced.

1153. couple of tubes wanted

Yahoo group: NEARC_Radio
Date: 2016-10-03 12:19:18 UTC
From: John Nowosacki
Topic: 1153 Message: 1153

anyone local have a type 47 output tube or 5AR4 rectifier tube they'd be willing to sell? I'd prefer to pick up something local rather than having it shipped.
Thanks

Sorry, no go...numerous units between 24 and mid 80s, but no 47s. The one I spotted earlier turned out to be a 41.

I still have to go through the whole box -- must be 100 tubes in there, and I've
yet to catalog and test them. If others need anything, let me know.

1161. rubber sheathed wiring

Yahoo group: NEARC_Radio
Date: 2016-10-11 13:43:22 UTC
From: Dick Joltes
Topic: 1161 Message: 1161

All,

Quick question: I'm working on an Atwater Kent 55c, and have noted the rubber insulation on the high voltage lines emerging from the power transformer (which is embedded in tar in one of those nice big square cans!) is badly dried out. There are actually gaps in some areas where the insulation cracked off years ago.

What's the preferred fix for this? Ideally I'd pull the unit from the can, but getting the transformer out intact seems iffy. I was thinking of very carefully slipping heat shrink onto each line, as far back into the can as possible, but wondered what others might have done as a fix for this type of situation.

Ideas appreciated!

Dick Joltes

Dick,

If you are looking to get the transformer rewound or to otherwise give you peace of mind, Gary at Transformer Rewinding Service has been around for some time now.

http://members.tripod.com/tubes_tubes_tubes/transformerrewindingservice/

Here is the AK page:
http://members.tripod.com/tubes_tubes_tubes/transformerrewindingservice/id59.html

I met Gary at a Hamfest near Bangor earlier this year. He was contemplating closing the business, but not immediately.

All,

Quick question: I'm working on an Atwater Kent 55c, and have noted the rubber insulation on the high voltage lines emerging from the power transformer (which is embedded in tar in one of those nice big square cans!) is badly dried out. There are actually gaps in some areas where the insulation cracked off years ago.

What's the preferred fix for this? Ideally I'd pull the unit from the can, but getting the transformer out intact seems iffy. I was thinking of very carefully slipping heat shrink onto each line, as far back into the can as possible, but wondered what others might have done as a fix for this type of situation.

Ideas appreciated!

?Brand name heat shrink has a typical dielectric strength of 8-900 volts so should be suitable and is generally what I use to handle cracked insulation where the wire can't be replaced. If you want to be extra cautious, use two layers.

I'm coming up on 76, and though I grew up in Md outside of DC I HAVE walked radio row in NYC--I married a Connecticut gal who's dad had radio/TV shop in Yonkers and then later in Westport, CT.
OLSON ELECTRONICS! Remember it well! While stationed at Lockbourne AFB just south of Columbus, Ohio for a couple years in mid 60's my buddy and I would visit the Olson store in Columbus while our wives went to the department stores. Always some "specials" on the tables that weren't listed in their sale fliers.
Speaking of the good old days, I still have my first purchase from Radio Shack: pair of Stromberg Carlson coax speakers. "Manufacturer's closeout 99.95" for $39.50 each. 15" woofer, chrome plated baskets, maroon cones, 3" coax tweeters. Woofers rated 100 watts, tweeters 32 watts. Built 8 cu ft bass reflex enclosures and ran 'em with my 28 watt Eico amp. That was 1957-58 down in Md., and Radio Shack just had the one location on Commonwealth Ave. in Boston and mailed out the sale fliers all over country. I don't have them hooked up to anything at the moment, but they're safely parked in the back corners of my 22 x 30 home theatre room. Back awhile, I fed them with a 120W Seavey keyboard amp with a Yamaha DX-7 synth, but my wife prefers our 6ft Henry F. Miller grand instead for her playing....

From: TrainBee
Topic: 1166 Message: 1166

I heard recently that AT&T is proposing to transmit or use the Power Lines for Internet use. Now, this was something that I had thought the FCC had squashed about 5 years ago. Has anyone heard anything more about this recently outside of the Fortune article?

Here's the article from Fortune.
http://fortune.com/2016/09/20/att-internet-over-powerlines/

From: jfxg@...
Topic: 1168 Message: 1168

Good evening, All -

An Ebay seller contacted us on our Facebook site to note that he has a number of antique radios for sale on Ebay via the following link.

punny65 | eBay http://www.ebay.com/sch/punny65/m.html?_nkw&_armrs=1&_ipg&_from

http://www.ebay.com/sch/punny65/m.html?_nkw&_armrs=1&_ipg&_from

punny65 | eBay http://www.ebay.com/sch/punny65/m.html?_nkw&_armrs=1&_ipg&_from Shop eBay for great deals from punny65!

View on www.ebay.com http://www.ebay.com/sch/punny65/m.html?_nkw&_armrs=1&_ipg&_from
Preview by Yahoo

Some of these are ambitiously priced, but most, if not all, are open for Best Offer. I realize not everyone is a fan of Ebay and should heed Bruce's insight on the world of Ebay, but I'll share this anyway, FWIW.

Regards,
John

Indeed, that's the world of Ebay. There's a wide range of perceived values out there of which probably < 25% of the sellers present realistic asking prices. Most of the people setting these values just assume they are "antiques" and can command a King's ransom.
I was initially hesitant to post this to the group, but, since he took the initiative to find us on Facebook, I decided to do so to give everyone a chuckle. But, hey, if you see a radio you want, offer a realistic price. In the worst case, he'll turn you down.

John

Kudos to the creative ebay seller! Not only is the seller well aware of the thousands of radio collectors but the far greater number of interior decorators who thrive on these accessories as a final touch to complete a rooms decor. Further, attracting attention of "collectors" that silk purses are indeed sows ears... Free advertising for those who don't haunt ebay pages as a pastime... Most assuredly the seller will move them all, if not the ebay venue in a window in New York or some other city certainly not the back room of crumbling backwater antique shop... More Kool-Aid anyone?

Mark! Your mention of UHF converters takes me back to 1965 when I was in AF stationed in Austin, Texas!Only station was channel 38, owned by Lady Bird Johnson. Transmitted all three networks (ABC, CBS, NBC).Problem was THEY decided which network for each hour, so if your favorite show at 8pm was on NBC and they were transmitting ABC at that time you were outta luck. My airman's salary kept my wife and me on pretty limited budget. So I picked up single bay fan ("conical") antenna for about 7 bucks, three 10ft mast sections, and some guy wire. We were on ground floor of a two story duplex north side of Austin. I'm generally not good on roofs, but somehow alone I got that antenna up on roof and guyed. Pretty low gain antenna, but it was about 60ft from ground and we were pulling in snowy but watchable shows of OUR choice from Houston--145 miles away.

While the topic of converters has come up, is any of this 'old technology' useful nowadays for amplifying or otherwise receiving the digital signals that are 'free' out there in the UHF band? I'm thinking of all the 4.1, 4.3, 5.1, 5.2, 25.1 etc.
I'd like to dump cable and try living on the variety of signals passing through the ether using a converter box, but have had some issues with reception in the past. If someone could recommend an antenna/amplifier combination that would work to give me 'free' tv and stations like GET, THIS, Antenna TV, etc that I could pump through my house and watch on my antique televisions it would be greatly appreciated.

John,I "cut the cord" almost three years ago. We're on high ground in Barrington,NH and always got plenty of signals in the old days with rooftop antenna and rotor. When cable arrived my son wanted it and paid for it--only $20 a month then. 25yrs later, price for basic was up to $71 and wife and I were only watching two channels--TBN, and she liked FoxNews. 71 bucks for two channels didn't make sense, although she sort of hated to give up Fox which is cable only.Put up $80 "HD digital" antenna from Radio Shack, bought $50 converter boxes from Walmart (since none of our sets were "digital ready), and used good rotor I still had on shelf from the old days.Got 32 channels. You DO need amp if feeding more than one set. Cable is so strong it doesn't "care" when you spit it 4 ways, but the antenna signal strength DOES get divided between the sets. Got the little $24 amp from Walmart, and signal to four sets is as strong as running just one set off antenna.Recently we got a 48" flatscreen which is of course "digital ready", and when I let it find channels on setup I discovered we now are getting 39 channels. Free.As you probably know, there's no snow and no multipath "ghosts" like in analog days. You either have a "showroom perfect" picture or nothing at all. During storms and sometimes early morning we may lose some stations briefly: image will pixelate and then "no signal" message on screen.I haven't moved the rotor from "south" in a couple years. I'm getting south Boston signals from about 60-65 miles "like a ton of bricks". Interestingly, we get Portland and Poland Springs (ch 8) fine off the BACK of the antenna.There are some VHF transmissions in sections of the country, but all OTA broadcasts in this region are UHF. The low channel numbers are just retained to avoid confusion.This means even though yagi antenna beam may be long (mine is 84" and the premium Winegards are 12-14Ft), because of the higher freqs the cross elements are shorter than in the old VHF days, and antenna weight is quite nominal, even for the monster Winegards, hence they withstand winds much better than in the old days!
If you're like me and don't see anything worth watching on regular network TV these days, all the "good old stuff" is on the new subchannels. MeTV, COZI, AntennaTV, Heros & Icons. etc.If you have one of the new "smart" TVs you can stream in movies and stuff from the internet. We didn't lose our internet when I cut the cable because our internet has been via Verizon DSL over one of our landlines for $15 a month.
SO....bottom line wrt OTA reception is, as they say in the real estate business, "location, location, location". If you've got a big hill or huge building between you and station you're sorta out of luck, but otherwise.... If you want to "test the waters" before shelling out for an antenna, you can stick up something simple and get SOME idea, or maybe check with any neighbors with antennas. In my case, at first I just bought one converter box and hooked up to my "big stick" CB antenna. Got a dozen channels, so went ahead with project.

I have one converter box and my old original Channel Master in the attic (VHF and UHF). Will it need to go back outside on the chimney, or will it pick up signals from inside the attic? I guess an experiment will show. I'm in North Reading, not on any hill, but only about 15 miles from Boston as the crow flies, so I expect to be able to get a good amount of channels on one "digital ready" TV and Converter box for one of my antique TV's. What exactly is an "HD Digital Antenna" if the signals are in the UHF band? Can't I just use my old UHF antenna?
Thanks,

I guess theoretically your old UHF ant should work. Compare it to photos of the new "HD digital". Lots of sales hype these days, as usual--if I'm not mistaken, an rf signal of a given frequency and antenna tuned for that frequency are "dumb" as to content of signal---digital, analog, HD, not HD, etc.Outside is better than in the attic, but unless you have a metal roof attic is probably OK, especially that close.When my son lived in Sterling he was doing OK with antenna in attic with regular asphalt shingled roof.
If you don't want to mess with straps and a chimney mount, just stand a mast next to house with only one or two brackets required. Also, though chimney mounts are common, the chimney fumes were always famous for premature corrosion of aluminum antennas.
If you want to grab Portland, Manchester, Providence, Hartford for more choices, rotors are only 60-70 bucks.
From here in Barrington, NH I watched the first moon landing in Aug '69 in color at 3am. Boston was not on air, so I was watching either Providence or Hartford, can't remember which.
And of course be sure to use good coax and not the old twin lead.... From: "John Nowosacki jsnowosacki@... [NEARC_Radio]" <NEARC_Radio@yahoogroups.com>

got a digital box (Zenith brand) off of Craig's list for $10 and hooked it up to old antenna sitting on the floor up in the attic and it found 29 channels. Really only 20 as 4 of them were either shopping or in a language I don't speak, and 5 of them were duplicates.
GET/This/Decades/METV/Escape/Laff/World/Bounce along with the usual local Boston channels 2, 4, 5, 7, 25
I'll try this out on my old TV sets for a while and see if between these stations and things on the internet I can finally say goodbye to the cable bill. I guess I could live without Monday Night Football on ESPN, but would miss History, Discovery, and Velocity channels.

Sounds good, John!I've never followed sports, so don't miss Monday night football, but realize I'm probably in minority on that.There are so many things to read on internet that I don't miss the other channels you mentioned.Old copies of Radio and Television News, Popular Science, etc. on the web--great nostalgic reading! Plus I imagine any subject on History or Discovery is well covered on the web.With all this fun tinkering with old radios and jukeboxes, I don't seem to have much time to watch even the good ole shows on TV these days. A good old mystery book with a cat purring on my lap usually does it for me til bedtime...

I'm in North Reading, not on any hill, but only about 15 miles from Boston as the crow flies, so I expect to be able to get a good amount of channels on one "digital ready" TV and Converter box for one of my antique TV's. What exactly is an "HD Digital Antenna" if the signals are in the UHF band? Can't I just use my old UHF antenna?Thanks,
On Wed, Oct 19, 2016 at 3:50 PM, Craig Hardy craig.hardy@... [NEARC_Radio] <NEARC_Radio@yahoogroups.com> wrote:

John,I "cut the cord" almost three years ago. We're on high ground in Barrington,NH and always got plenty of signals in the old days with rooftop antenna and rotor. When cable arrived my son wanted it and paid for it--only $20 a month then. 25yrs later, price for basic was up to $71 and wife and I were only watching two channels--TBN, and she liked FoxNews. 71 bucks for two channels didn't make sense, although she sort of hated to give up Fox which is cable only.Put up $80 "HD digital" antenna from Radio Shack, bought $50 converter boxes from Walmart (since none of our sets were "digital ready), and used good rotor I still had on shelf from the old days.Got 32 channels. You DO need amp if feeding more than one set. Cable is so strong it doesn't "care" when you spit it 4 ways, but the antenna signal strength DOES get divided between the sets. Got the little $24 amp from Walmart, and signal to four sets is as strong as running just one set off antenna.Recently we got a 48" flatscreen which is of course "digital ready", and when I let it find channels on setup I discovered we now are getting 39 channels. Free.As you probably know, there's no snow and no multipath "ghosts" like in analog days. You either have a "showroom perfect" picture or nothing at all. During storms and sometimes early morning we may lose some stations briefly: image will pixelate and then "no signal" message on screen.I haven't moved the rotor from "south" in a couple years. I'm getting south Boston signals from about 60-65 miles "like a ton of bricks". Interestingly, we get Portland and Poland Springs (ch 8) fine off the BACK of the antenna.There are some VHF transmissions in sections of the country, but all OTA broadcasts in this region are UHF. The low channel numbers are just retained to avoid confusion.This means even though yagi antenna beam may be long (mine is 84" and the premium Winegards are 12-14Ft), because of the higher freqs the cross elements are shorter than in the old VHF days, and antenna weight is quite nominal, even for the monster Winegards, hence they withstand winds much better than in the old days!
If you're like me and don't see anything worth watching on regular network TV these days, all the "good old stuff" is on the new subchannels. MeTV, COZI, AntennaTV, Heros & Icons. etc.If you have one of the new "smart" TVs you can stream in movies and stuff from the internet. We didn't lose our internet when I cut the cable because our internet has been via Verizon DSL over one of our landlines for $15 a month.
SO....bottom line wrt OTA reception is, as they say in the real estate business, "location, location, location". If you've got a big hill or huge building between you and station you're sorta out of luck, but otherwise.... If you want to "test the waters" before shelling out for an antenna, you can stick up something simple and get SOME idea, or maybe check with any neighbors with antennas. In my case, at first I just bought one converter box and hooked up to my "big stick" CB antenna. Got a dozen channels, so went ahead with project.

While the topic of converters has come up, is any of this 'old technology' useful nowadays for amplifying or otherwise receiving the digital signals that are 'free' out there in the UHF band? I'm thinking of all the 4.1, 4.3, 5.1, 5.2, 25.1 etc. I'd like to dump cable and try living on the variety of signals passing through the ether using a converter box, but have had some issues with reception in the past. If someone could recommend an antenna/amplifier combination that would work to give me 'free' tv and stations like GET, THIS, Antenna TV, etc that I could pump through my house and watch on my antique televisions it would be greatly appreciated.

People on ebay may have some unrealistic prices, but at least you can search for "sold items" to see what the actual value might be. I find Craigslist to be much worse for unrealistic expectations, since there's no comparable way for folks to find out otherwise. Some postings go on for many months with the same listing, and evidently they aren't taking the hint. Mark Nelson

From: Guy Brown
Topic: 1183 Message: 1183

I wouldn't spend much money on equipment until you've tried it to see how it works in your area. I live in valley and had just barely watchable reception of a few analogs stations. I spent some money trying 3 different antennas and buying an amplifier. The amp. did help reception. I found digital reception at my location had too many dropouts for me. I've had mixed reports from other people in southern New England. Some have good reception others had the same results as me. I think it really depends on the geography and terrain of your location and how far you are from transmitter. For me an omnidirectional antenna seemed to work better. In my area the digital stations are hi band VHF and UHF , so need antenna or antennas to cover both. Good Luck because I gave up and bought cable.

Location is certainly one of the key factors. An lod friend of mine here in NH has told me about his dad who owned Charles' Radio & Television in Somersworth, NH. He was in at the getgo--sold the first color set in NH.
Before he's sell someone a TV he'd test their location: he'd put an aerial up on an extrension ladder at their home to see if they could get WBZ.
My father in law started his radio shop in Yonkers, NY in 1930, then moved out to Westport, CT in 1951 and retired in 1970. Antennas were a simpler deal for his Westport customers: all three networks were broadcasting from single location--top of Empire State Bldg. So he'd just point rooftop aerials for a heading of 240 degrees using his daughter's Girl Scouts compass. I have that compass here in my drawer. If customer wanted to get Hartford, Providence, or maybe Boston, he sold them a rotor.

Folks,
For Sale,
Radio-Shack UHF, VHF,FM, corner reflector, log-yagi design, fringe TV antenna, new, never unfolded, never installed. $85, pick-up only. Cornell-Dublier AR-22 antenna rotator. Used one year, in original box, all hardware clean, no rust. $125, pick-up only. Two,may be three, 7-element 2-m beams, alike, well used, rusted hardware but are salvageable. $10 each, pickup only. Spool approx 800' high quality foam core 300 ohm downlead $125, pick-up only.
As is, as shown, terms are cash at time of pickup. I am located in S. Dartmouth MA and can be reached via email.

Regards,

Charles

John, Craig --
I've been using off-the-air digital TV here in Natick almost since the HDTV conversion, since the Comcast bottom-end cable video was so awful. We use a Mohu Leaf taped to the wall behind the TV (cable ready) and get about 30 channels, including a couple of NH and RI stations. We have to move it from time to time when weather (wet leaves usually) causes too many dropouts.

There are a couple of websites that will give you an indication of what channels you can receive at your location. The one that I've used most recently is http://www.tvfool.com/
Most of the area TV stations transmit on UHF channels, even if their channel number of record is VHF. Though I have a couple of UHF boosters in addition to the 100 or so VHF boosters, I've not tried them. They're all tuneable, and probably have noise figures inferior to modern units, so they're a pain to use. Mark Nelson

Based on my experimentation the expensive antennas didn't work that much better than the simple ones. I would say try any TV antenna you can get you hands on cheaply with a converter box as a test. A UHF antenna would probably work better since most of the digital channels are on UHF band but some are on the hi band VHF. Because I'm in weak signal area the amplifier did help some. I know people have had good results receiving a number of stations in better locations than I have. Analog reception was poor in this neighborhood anyway and reception just got worse with digital.

I remember the old days before cable TV. We had a VHF antenna with rotor on the roof. Our black and white set had only a VHF tuner. There weren't any UHF stations in our area. I lived in southeastern CT back then with the stations in Hartford, New Haven, and Providence so everybody had a rotor.

That's a great site for finding your local signals. ..loads of general information and very interesting. It has convinced me to try an antenna for off the air reception as signals look strong and plentiful at my location.

Do you have a favortte site for getting info about what each channel carries for its extra sub-channels?

I miss the old days of VHF/UHF TV. It seems I always lived in poor signal areas so I grew up with roof-mounted antennas, rotors and sometimes amps, although from my experience I agree with the info on the TV Fool page about how typcial amps reduce the signal to noise ratio with their own noise floor. The only times they semed to help were to overcome losses from long lead-ins, splitters or for less sensitive TV sets. But they did often work well in those situations.

I also miss the old days of analog TV. I still watch an old TV with knob type tuners. I agree adding an amplifier will increase noise. I would only use an amp if I was getting poor results without one and if adding one made a definite improvement.

I use Titan TV -- it's sort of a online TVGuide. You put in your location and select OTA (or local cable supplier) and you get a listing of all available channels, in real time. Half hour increments. You may not need to know what's on, but this app has alerted me to new sub-channels I hadn't been aware of.

Hi Bruce,

This is Laura Richardson from Massachusetts. You stopped by my dad Arthur’s home a year ago September in Monson, to look over his collection. He has since passed and my siblings and I are cleaning out the small remainder of his collection. There is a collection of “QST amateur radio” magazines. They are bound by year and run from 1952 to 1969. If anyone is interested in the collection, they can have them for free. Sorry about the short notice, but I need to know by Saturday. I just found your card to contact you. We have to have the home cleared out by Sunday for the property transfer on Monday. I am willing to hold on to the collection for pick up at a later date. I may be reached at the number listed below. Once again I am sorry about the short notice.

Thanks,

Laura Richardson

Hi All -

I received a message on our Facebook site as follows:

Hey I was just curious. I have a 1942 philco a-801, would any of your members be interested in it? I had been trying to sell it but haven't had any luck. It definitely needs some good restoration. So I'm just looking to get rid of it. I'm in Lunenburg, Ma so if someone is interesting it's free for pickup or I could work something else to deliver it somewhere.

The seller can be contacted via email: rob.duval@gmail.com
He also provided a link with of some images:

http://imgur.com/a/R4Tuc http://imgur.com/a/R4Tuc

This looks to be in pretty solid condition, deserving of a restoration and a good home. Someone please save this from a worse fate!

I was at Kristophers house to pick up a chassis for a friend in Kentucky, and bought all of Kristopher’s tubes.
It filled my Subaru.
There are a lot of parts sets there including at least 20 Atwater Kents.
The 3 things I thought were cool but didn’t have room in my car:

Westinghouse Deco Grandfather Clock

Acracy Akradyne SR2

Pair of Srtomberg Carlsons 633&634 and 601A&601B with original =
instructions

I tried to put pictures on but the site says they are too big

Bunch of other stuff.
He has to have everything out of there by next weekend at latest.

John,Not sure what you mean by Seeburg home units, unless you mean the ones with works in a plain-Jane box instead of showy light up cabinet. If that IS the case, then troubleshooting should be same as for regular jukes like mine. I have two units: a 1939 "Classic" model, and a 1946 model commonly referred to as "trashcan" or "R2D2". The '39 unit was already perfectly restored cosmetically. Amp was already re-capped and had good tubes. Pickup was inop cuz someone had managed to smoke the coil in it. George Epple in Balitmore fixed that problem for me. I had to make a new motor coupling, and then it was working but not reliably grabbing all trays. Scratched my head a lot on that one before finding the problem: a slightly warped aluminum casting on the selector slide. Carefully straightened it and all was well. Couple levers on mech were set wrong, but took care of that. The 20 plastic selector buttons were too cheesy and distorted to work freely in the front escutcheon slots, but got perfect injection molded replicas from Glenn Bynum in NC.The '46 trashcan was very shabby, but nearly complete, and 2nd owner before me had already shelled out for new side plastics, lid animation motor and color wheel----parts worth twice what I paid for machine.   Restored the cabinet, made up the one missing part--1/4" shaft that connects selector helix to solenoid selector bank--and after cleaning and oiling mech it runs fine! Pics of the machines attached.Got a picture of your Capehart unit? I'm retired, so plenty of time to visit and fix your Seeburg if I can....

"A government big enough to give you everything you want, is big enough to
take away everything you have." ... Thomas Jefferson
Conservatives believe government action is an obstacle to our freedom.
Leftists believe our freedom is an obstacle to government action.
There is no way to prove that God exists. But what is provable is what
happens when societies stop believing in God: They commit suicide.

Topic: 1199 Message: 1203

JohnWOW, I'm getting an education today---didn't know about those Seeburg home consoles. Only knew about jukes!That vertical storage arrangement looks totally different from the 20 horizontal slide mechs I have. Not saying I wouldn't be willing to take a looksee, but I'd be going in "cold" so to speak....
What I was thinking you had was the Seeburg mech in a plain box---just remembered, they were called "hideaway" units. Instead of showy light-up console in restaurant or pub, the works were stashed out of sight and operated by remote boxes, and of course had wall speakers.
Craig

Hi craig,Here is a link to the unit(s) I have. They work like regular Seeburgs, but hold 12" LPs playing at 33 1/3. Almost as cool as a Capehart.
http://www.jukebox-world.de/Forum/Archiv/Seeburg/Seeburg6000.htm

On Fri, Nov 18, 2016 at 2:00 PM, Craig Hardy craig.hardy@... [NEARC_Radio] <NEARC_Radio@yahoogroups.com> wrote:

John,Not sure what you mean by Seeburg home units, unless you mean the ones with works in a plain-Jane box instead of showy light up cabinet. If that IS the case, then troubleshooting should be same as for regular jukes like mine. I have two units: a 1939 "Classic" model, and a 1946 model commonly referred to as "trashcan" or "R2D2". The '39 unit was already perfectly restored cosmetically. Amp was already re-capped and had good tubes. Pickup was inop cuz someone had managed to smoke the coil in it. George Epple in Balitmore fixed that problem for me. I had to make a new motor coupling, and then it was working but not reliably grabbing all trays. Scratched my head a lot on that one before finding the problem: a slightly warped aluminum casting on the selector slide. Carefully straightened it and all was well. Couple levers on mech were set wrong, but took care of that. The 20 plastic selector buttons were too cheesy and distorted to work freely in the front escutcheon slots, but got perfect injection molded replicas from Glenn Bynum in NC.The '46 trashcan was very shabby, but nearly complete, and 2nd owner before me had already shelled out for new side plastics, lid animation motor and color wheel----parts worth twice what I paid for machine. Restored the cabinet, made up the one missing part--1/4" shaft that connects selector helix to solenoid selector bank--and after cleaning and oiling mech it runs fine! Pics of the machines attached.Got a picture of your Capehart unit? I'm retired, so plenty of time to visit and fix your Seeburg if I can....

Hi Craig,Are you a Seeburg fixer? I have a Capehart player that I have restored electrically and modified (not butchered) to play 33 1/3 (still have original 78 rpm motor). I don't really want to sell it, but am having trouble finding room for it in the house. I have 2 of the Seeburg home units designed to play albums that have some record selection problems. (might just be clutch lubrication issues, not sure). Maybe we can communicate off line about bartering some Seeburg repairs in exchange for the Capehart unit? I'll respond to your Craig's list post (I'm in North Reading, MA).Thanks,

1207. Looking for an AA5 loop antenna

Yahoo group: NEARC_Radio
Date: 2016-11-27 19:00:35 UTC
From: rtalfa@...
Topic: 1207 Message: 1207

Hi Folks, I am looking for an antenna for my home brew radio project. Any AA5 loop antenna attached to a radio back should do. I am building a radio to help me with my understanding of how a radio functions. As I was working on it today, I realized that I do not have an antenna for it and did not want to rip one out of any of my radios. Can't seem to upload a photo showing my progress thus far....

Thanks,

Russ

1209. Surge Limiting Resistor

Yahoo group: NEARC_Radio
Date: 2016-11-28 18:08:02 UTC
From: TrainBee
Topic: 1209 Message: 1209

I've come across something I haven't seen before. It's a Surge Limiting Resistor. This is going into a Philco C-579. (Pg 16 in Beitmans 1955) It's a little plastic case radio. It also has a phenolic board with copper tracing. That's seen better days as well. It seems the only thing holding me back is this resistor.

Can anyone lead me to a source for them? The schematic says 880 ohms when cold / 50 ohms when hot.

Thanks in advance.

Joe -

Surge Limiting Resistor = Thermistor. You can find a lot of them listed at sites like Mauser and Digi-Key. You will need to know the approximate current that the radio draws through it when operating.

The items I linked you to have much lower "hot" resistance, but I don't see why you couldn't just put suitable power resistor in SERIES with the thyrector to get your 50 ohm hot resistance....I remember using those little blue thyrectors for CKT protection 45yrs ago when we were building tension controllers for printing presses...

Bill,

It's also been suggested to me that it is a NTC thermistor. I'm not sure if there is difference. Regardless, I just want to get some current flowing. I put a 1K 2W resistor in there. Still, there is no filament current. I've taken care of the usual suspects, such as tube checking (OK), replaced the electrolytics and filter caps, and a resistor in the output section that wasn't anywhere near it's value. I checked the tracings on the board, continuity checks, etc... All OK.

A couple of years ago, I came across a bad thermistor in a Kenwood switching PS. That thermistor doesn't look anything like this, but then it's been 60 years. I've attached the schematic just in case another set of eyes can come up with something. I suspect that if I drop the resistor value I put in the thermistors place, I might get some current to flow. Anyway, if you, or someone else, has any ideas, please pass them along.

I should point out that this thermistor must have had a pretty bad failure. It looks a bit burnt on the board right where the thermistor is. If you see something that is rearing up at you that could also be suspicious, please let me know.

Thanks.
Joe

1215. Re: [NJARC] Current limiting Devices

Yahoo group: NEARC_Radio
Date: 2016-11-29 16:23:37 UTC
From: TrainBee
Topic: 1215 Message: 1215
Attachments: 1 described; binary payloads are missing from this source WARC

Hi Jim,

This opened up quite the conversation yesterday. Al Klase made what seemed to be a big issue rather simple. Sure I could go and get the varistor (mail order for me) or I could just drop in a 50 ohm 5W resistor. The 50 Ohm resistor is the value for the radio under normal operation. The schematic called for 880 ohms for the start-up, then to drop to 50 ohms. If I had the room, I could have put a monster (for this size radio) 10W resistor in there. It didn't take long to make the choice. Then I got to thinking, all I needed to do was to bleed off some of the unused voltage and have something to absorb the inrush current. This little tike uses 4 tubes, 50C5, 35W4, 12AU6 and 12AV6. It's no wonder the original part blew up. It is about the diameter of a pencil eraser and maybe 3/8" thick. It couldn't take years of heat.

Here in Maine, AM during the day is a pipe dream. What I couldn't believe was that I was picking up a station, in the basement, at 10:30 AM, from not too far from here on it. You can't do too much to tweak it to hear better. This was made for local station use at best. I'll be curious to see what I can hear with it tonight.

So, I hope some of us learned a little bit about varistors and alternate solutions. Just in case you missed what this radio is, look for a Philco C-579 of the 1954 vintage. Curiously, someone actually sold one of these a few years ago for $95.00. Who would have guessed? I picked this up at a local flea market for $10 and it's in pretty good cosmetic condition. I attached the Beitmans page if you care to take a look.

Regards and thanks.

I believe the varistor should work. This reminds me of a problem that I have not been able to solve:

"how to you use voltage measuring equipment, aka analog oscilloscope, to measure a very short transient such as a current surge? "

The first part I think is solved using a current probe, bench made or store bought, but how do you record the high speed transient.....the old fashioned way....poloroid camera on scope.. and single triggered trace? What do you use for the trigger? A scope with memory option makes second part a lot easier...I imagine!

Jim

The National Electronics Museum is offering an excellent 2017 calendar with vacuum tube pictures. I recommend it if you are a tube lover. A bargain at $13.00, instructions below.
Ray

The National Electronics Museum is releasing our 2017 calendar this month, exclusively featuring tubes from our Museum collection! Photographer Linden Lee created an artistic and memorable image for each month. As a result, we believe it's a calendar you will enjoy the whole year through and keep it for many years to come.

Pre-orders are now available for $13 via Paypal: Just click on the "Donate" button at the bottom of our museum homepage (http://nationalelectronicsmuseum.org/index.shtml), enter $13 as the amount and write "2017 NEM Calendar" as the "Additional Note to Seller."

You can also pre-order by sending a check for $13 to: National Electronics Museum, P.O. Box 1693, MS 4015, Baltimore, MD 21203.

Calendars will be sold for $10 in person at the Museum gift shop. Contact Kathleen Foster at nemuseum.adm@... with any questions.

1217. Sony C37 A mic value?

Yahoo group: NEARC_Radio
Date: 2016-12-01 18:46:50 UTC
From: Dick Joltes
Topic: 1217 Message: 1217

A guy recently contacted me, saying he'd found 2 of these units
(working, apparently) and was looking to sell them. Here's what he sent:

As far as I can tell they have NOT been refurbished (meaning the power
plug is 2 prong only). I _think_ when people refurbish these they add
grounds so they can be used in a studio setting etc...

I have the corresponding power supplies for both of them (which coverts
the 4 prong 1958 standard to regular XLR). I also have a ragtag manual
for them as well.

I'm looking to get $3000 a piece for these, or both for $5000. I know it
seems nuts, but I've found these on sale on reverb.com
<http://reverb.com> and ebay for $4K - 6K.

Here are some pics: https://imgur.com/a/qo0Me

Is this guy totally smoking something, or are they really worth that
much? I found one guy selling
this model for $3100, but whether anyone actually gets that much for
them is unknown. When
anyone mentions "eBay prices" I start to chuckle...

If anyone is interested or knows someone who is, let me know and I'll
put you in touch with
the seller.

cheers,

Dick Joltes

I have been a fan of Ron's work for many years now. Whether it's sound or picture, anything that survives from the early years of film with notable plots and actors is wonderful. I would welcome the opportunity to someday hear an original Vitaphone disc on a modern turntable as already collect 78's and love their sound. The Gold Diggers series are of special interest because of the art direction and certainly the first filmed versions of some of the greatest songs ever written. In my opinion, Warner Brothers has been the crown jewel of restoration investment of films remastered for the public for years now and too many studios arrived at that party too late. Wonderful that the studio has such a partnership with the project instead of constantly being involved with copyright lawsuits. More power to both.

1220. Re: [NEARC_Radio] Fwd: [NJARC] Vitaphone on TCM - Monday, Dec. 5

Yahoo group: NEARC_Radio
Date: 2016-12-02 02:44:15 UTC
From: Craig Hardy
Topic: 1218 Message: 1220

I've never seen Vitaphone equipment or movies, but heard a lot about it while helping a friend run the old IOKA theatre in Exeter, NH., where we were still running dual shutter Brenkerts with Ashcroft lamps (running 8mm pos & 7mm negs @ 70 amps.) The IOKA was built in 1915 to provide a NH venue for Birth of A Nation, and was in continuous commercial use until sold a few years ago, and nobody's kept it open since.
REASON I'm jumping into this Vitaphone discussion is I knew a fellow (older than I am and who's probably passed awy now)who told me about running Vitaphone in Danbury, CT when he was a teenager. Said they had a "three strikes" rule in the booth: if sync was off they'd kick the machine to make needle jump a groove, then check the screen. If sync wasn't acceptable after three kicks, they had to stop, re-wind the 1,000ft reel and start over again while the audience waited in the dark! Told me he thought if sound-on-film hadn't come along in a few years like it did he didn't think "talkies" would have lasted....

  I have been a fan of Ron's work for many years now. Whether it's sound or picture, anything that survives from the early years of film with notable plots and actors is wonderful. I would welcome the opportunity to someday hear an original Vitaphone disc on a modern turntable as already collect 78's and love their sound. The Gold Diggers series are of special interest because of the art direction and certainly the first filmed versions of some of the greatest songs ever written. In my opinion, Warner Brothers has been the crown jewel of restoration investment of films remastered for the public for years now and too many studios arrived at that party too late. As Columbo would say, "one more thing..." about Vitaphone. Please don't be insulted if you already know this:The Vitaphone discs are 16" and play from the center out at 33 1/3 rpm. I have a projectionist's manual showing all the procedures. LOT to do in early booths: besides doing changeovers: checking filament and plate voltages on amps, keeping batteries for them charged (two sets of batteries---one set charging while other set in use).
In urban areas with only DC mains, with advent of sound, motors with electronic speed controls had to be used. 'I scrounged several motors and controllers out of the closed Scenic in Rochester, NH some years back--place bought by an entreprenour and for $200 IOKA friend and I got anything we wanted from booth and theatre (no projector heads, but lots of other goodies) as place was being gutted. I sold motors and controllers to a collector who drove here from Ohio for them and some other stuff I had. They were Western Electric, missing the tubes--and THAT is when I learned about price of WE tennis ball tubes!

1222. Large Satellite Dish Groups in New England

Yahoo group: NEARC_Radio
Date: 2016-12-04 18:43:38 UTC
From: radioorphanage@...
Topic: 1222 Message: 1222

My neighbor is an artist still living in the 60s and 70s space era. She loves painting satellite dishes and other space race items. I saw her at The Button Factory in Portsmouth, NH this weekend where she was doing an open display, and yes, she was serving TANG.
I mentioned to her that my wife grew up in Western Maine near Andover where the original Telstar station was. There are still a couple large (60'?) dishes there but it is no longer Telstar, My neighbor was pretty excited to see any large satellite dishes. Do you know any other locations in New England where a group of large satellite dishes still exists?
Thanks,
Bruce Phillips

Sorry Bruce,

I haven't seen anything that large up here. Most of what I see are orphans from the 70's. 10 ft or so in diameter. Even when I was living down in NJ, there were still some of those 10 footers down there and into Eastern PA. I'm not into the Amateur Radio side of the Satellite hobby. From what I've seen, most of the hobbyists use a portable yagi to track the birds, so the big dishes may just be overkill.

I'm looking for a 1940s Radio Vision 414 small tombstone tube radio.
It had a motion lamp in the top with a boat and the Statue of Liberty.
It says Radio Vision on the label on the front, but I think Majestic actually made it.
Cash or a trade that would interest you.
Let me know what you have,
Bruce Phillips

A satellite TV head end will have a number of big dishes. A facility for Dish TV, for example, needs to uplink dozens (hundreds?) of channels simultaneously to each satellite in its many constellations. There will be at least one big dish pointed at each satellite, and generally two (for redundancy). Offhand I don't know where the head ends are for Dish, DirectTV, and so forth, but an Internet search should turn them up.

Remote towns often have downlink satellite antenna farms, for distribution of TV channels over local cable systems. As more and more areas are served by fiber optic cable, there are fewer antenna farms, but I still see them occasionally.

Jodrell Bank (England) and Green Bank (WV) have absolutely HUGE dishes.

I would imagine that NASA and military satellite control stations have them as well.

As noted by other posts, you don't see a big dish on every block, but a Google search should find a few farms.

Bill

There was a 150 diameter dish at Sagamore Hill in Hamilton MA, but it was moved to another Massachusetts location a number of years ago.
You can trace it by doing a Google search. Hamilton still has some equipment but I think it's smaller solar scanning stuff

As if 2016 wasn't cruel enough, we found out on December 30 that our dear friend and colleague Rich Conaty, host of The Big Broadcast for more than 40 years, had succumbed to cancer at the age of just 62. He was one of a kind, with an open-hearted, infectious passion for the music of the '20s and '30s. Stay tuned for details about a tribute program, and in the meantime share your thoughts on Rich and read the remembrances of his many fans at wfuv.org.

1243. Fwd: Norway to end FM service: cold turkey

Yahoo group: NEARC_Radio

From: John Nowosacki
Topic: 1243 Message: 1243

Just as 'Digital' killed the ability of my Philco Predictas to bring in stations over the air without a special box, our antique radios may be headed in a similar direction. While they're still available, you might want to pick up an inexpensive AM and/or FM transmitter kit to build for yourself, so you can rebroadcast program material around your house to listen to on your 'obsolete' radios.

See following story in Radio world:

John2 and fellow NEARC members,

Back around January 2004, there was an article in PopCom (remember that great magazine), that had a review of a relatively new AM low power transmitter kit. Well, I went and bought it and haven't been happier that I did. If you want a great low power AM transmitter this is it! Check out their offerings... http://www.sstran.com/

I built the AMT3000. Back then you had to order it with the IC mounted or do it yourself. I had it mounted for an additional fee. I believe now you can get the socket and install the chip yourself. Range is relative, but I can get it to broadcast out about 300 ft. You can run just about any audio input into it's RCA jacks. If you have a vintage console, the sound is terrific.

If you've been to the Kutztown meets that the DVHRC runs, Lewie has this unit playing. It's simple to setup and all you need is a VOM to get the drive just right.

Now, I'd like to know if there is an equivalent quality low power FM transmitter I could build? Jazz seems to be a foreign format here in Maine. I'd like to here some Django Reinhardt, Big Bands, etc.. other than the same old stuff I hear every day.

Regards,

Joe Devonshire

I agree, the AMT3000 is nice. Mine is somewhat modified and I'm happy with it. As far as FM transmitters go, I (personally) wouldn't even bother with a kit. There are so many inexpensive FM transmitters available. Back to the original topic, though; I think it will be a long time before FM as we know it here in the US ceases to exist.
Does anyone have any data pertaining to the percentages of the population with respect to listening to AM vs. FM vs. satellite or other mediums?

Good evening all -

Of the FM transmitters, does anyone have any good experience with any particular model? The AMT3000 is generally recognized as the class of the field for AM transmitters, but I'd be curious what is the equivalent for FM for reasonable money.

Thanks,
John

I built an FM Stereo transmitter kit that I've been using for about 6 years now. I think the company is now out of business, but there may be some kits floating around on eBay. It was called Ramsey and I believe the model was FM10C. It was less than $50 and easy to put together. I transmit on an even number (100.2) so as not to interfere with any close neighbors sets. Of course, my analog receivers have no trouble tuning to this frequency. I currently play my Sirius XM receiver into it for rebroadcast of whatever I feel like listening to (40's, 50's, 60's, Deep Tracks, etc.). It reaches all over the house, basement, garage, patio (actually, a little ways down the street). Simple R and L RCA jacks as inputs, so you could hook up any music source to it.

Holy crap! Many old radios have a coil of fine wire connected directly across the variable capacitor (the thing he calls a "tuner"). If you put 400 volts across that coil, it will smoke instantly. These coils are probably the second-hardest-to-find part of an old radio.

Unless you first completely disconnect both sides of the vari-cap,

DOAN DOO DAT!

Yeah! I was thinking the same thing. Compressed air much safer.... Or a magnetized thin steel rule....Or double sticky on a thin strip of metal or plastic. ANYTHING but 400V!!!!

Good Luck Point Poles To Come Down
January 13, 2017

About 300 poles total will be removed from Good Luck Point and Manahawkin from the old ship-to-shore communication system. Work would begin January 17. (Photo by Catherine Galioto)
OCEAN COUNTY – The bayfront horizon will soon change. Crews are expected to begin work January 17 taking down hundreds of landmark, historic telecommunication poles in Good Luck Point and Manahawkin.
Berkeley Mayor Carmen Amato received notice from the project managers, through the United States Fish and Wildlife Service's Edwin B. Forsythe Refuge, late 2016 that work was scheduled to begin January 17.
The project will remove several hundred poles from the old AT&T field in the marsh of Good Luck Point and 100 poles from its sister site in Manahawkin.
The long-decommissioned telecommunications poles were once part of a ship-to-shore network. The pole field is located along Bayview Drive in Berkeley and Beach Avenue in Manahawkin. AMEC Foster Wheeler Environment & Infrastructure to supervise and contract the work.
The Refuge held public hearings last year on whether to proceed with the project as part of marsh resiliency, and completed some preliminary work in the fall to test drop some poles to prepare for the bulk of the project for January.

(Photo by Catherine Galioto)
In Berkeley, the crews will be accessing the pole field and staging equipment on the adjacent AT&T building site. The township owns the building and is awaiting word from its engineers on how to demolish it and if any remediation is needed. The building has sat in disrepair for years before the township assumed control of it.

The Good Luck Point site includes a shortwave transmitter building and antenna field, that in the 20th century operated under the call sign WOO, which helped broadcast Voice of America around the globe after 1944 and enabled communication with ships at sea. Osprey nests around the poles had new platforms built and installed. The mayor said the AT&T building will eventually come down too and a bird sanctuary or passive recreation/lookout point could be established there.

“The Township has given permission to the United States Fish and Wildlife Service to take down the telephone poles…The project is being financed by the USFWS at no cost to Berkeley Township,” said Amato. “They anticipate the full project of pole removal to be conducted in January.”

The proposed project will remove approximately 340 wooden poles from the inactive antenna field, along with several metal antennae. The goal of the removal, funded by Superstorm Sandy recovery dollars, is to “enhance coastal marsh habitats by increasing marsh resiliency from impacts of large storm events and other ecosystem stressors,” U.S. Fish and Wildlife said in a statement.

1254. American Bosch 405 schematic

Yahoo group: NEARC_Radio
Date: 2017-01-16 04:44:44 UTC
From: Dick Joltes
Topic: 1254 Message: 1254

All,

I happened across one of these units recently and am trying to find a decent schematic for it. So far the only sources (Radiomuseum and so forth) have one that's almost illegible due to over-copying, and it's not very detailed. The worst is that there's a box of filter capacitors in the middle that will obviously need replacing...

Any sources for better copies appreciated.

cheers,

Dick Joltes

You might also do a Google Search for "Beitman's", and another for
"Scott Harvey". Both are excellent sources.

Big city libraries are likely to have paper or electronic copies of
Beitman's and Rider's. Any of these will do wonders for you.

I am; that site has the same file. The unit I have is also a 405SC,
which uses
two different tubes and possibly has other differences. I can't find any
info
at all on this variant on any site (so far) and was hoping someone might
have
a reference or two. The filter capacitor box is totally unmarked, and I'd
rather not risk using incorrect values based on the 405 data.

cheers,

Dick Joltes

Dick, I have a copy that is slightly better than what is online. I'll email it to you shortly. The Riders index shows a model 405, nothing with the SC suffix. A few other American Bosch sets have an -A or -AC suffix, but no -SC, so I think the 405 schematic will have to do. Beitman's doesn't have the diagram for this set.

William,
Good thoughts from all of your friends at NEARC.
You did well to take care of your Mother as long as you did.
It was important to her that you respected her wishes.
You know She is in a far better place now.
Best wishes from all,
Bruce Phillips
President NEARC

1276. Sparton 1568 console for sale

Yahoo group: NEARC_Radio
Date: 2017-01-21 18:42:26 UTC
From: Howard Mariotti
Topic: 1276 Message: 1276
Attachments: 5 described; binary payloads are missing from this source WARC

Is anyone interested in this console? It's one of the higher end Sparton "Selectronne" sets with 15 tubes, pp 2A3 output, and 15" speaker. I haven't tried it, but someone worked on it and it has some new wiring and output transformer. The cabinet needs some veneer repair as can be seen in the pictures. 2A3s test good. I'm looking for $250 and can bring to Radio 48.

1277. Re: Sparton 1568 console for sale

Yahoo group: NEARC_Radio

From: Radioorphanage
Topic: 1276 Message: 1277

Howie, et al,
That is one beautiful and hard to find console!
I can’t have it, but it is a steal for someone at less than 20% of what Stein shows the value.
Someone should be very happy.
Bruce

1278. Re: Sparton 1568 console for sale

Barry K. Has decided to buy this - congrats Barry.

Thanks Bruce. This is a diamond in the rough and it's really not very rough, so I'm glad someone wants it.

P.S I'd probably keep this one and restore it, but I have a beautiful Arvin that I bought at Radio 45 which is the cornerstone of my console collection.
Howard

1279. WTB: Escutcheon/bezel for Pilot #1284 drum dial

Yahoo group: NEARC_Radio

Greetings, everyone. Been a NEARC member for a few years but just joined the group here. I'm looking for the escutcheon/bezel for a Pilot #1284 drum dial as shown in the attached images. The escutcheon plus the dial is shown in one image; this is from an old Pilot catalog. The other image is a photo I took of the dial I have. Note I only need the escutcheon, not the entire dial assembly. Please check your junqueboxes! I can purchase or perhaps we could work out a trade.

Thanks,
-Larry (ARS NE1S)

Hi Everyone.

These are my top wants. My goal this year is to acquire between 1 - 4. Older restorations welcome. I deal honesty, no lowballing and want a great deal.

Criteria: original (speaker, knobs, dial, factory sticker, finish) Will consider refinish. No problem with new decals yet prefer original.

_____

All
Found some other interesting documents in the CIA stash.

https://www.cia.gov/library/readingroom/docs/CIA-RDP78-03424A001300020067-4.pdf

Appears to be the groundwork for the "spy radio" carried on the B-47 and B-52 bombers so that the aircraft crew could radio in for rescue. Also found documents relating to the U2 being fitted with the Collins KWM-1 so that the U2 mission could be recalled as needed. Looks like the transceiver is fixed tuned and in a pressurized case so as to operate at 70,000 feet. Just search for "U2 and SSB". You will find that some docs are redacted but other docs are not so one can piece the story together.

Also found several documents concerned with high ranking military officers leaving the service and taking jobs with the industries that they were once procuring equipment from. No wonder Eisenhower was concerned about the military-industrial complex.

Fun stuff,
Jim

Hi folks
Just got word of an interesting cache of declassified CIA documents coming online. This is sure to interest all the conspiracy kooks and ufo nut but also there is quite a bit of potentially interesting technical data. Just found a CIA report on the Soviet tube industry of the 1950s-60s. Interestingly, it isnt completely declassified, there are still bits cut

out from the text..
Dan

couple of bits that may be of interest to people. havent read all of this yet so dont know what is contained in all of it

1. COORDINATION BETWEEN EAST GERMANY AND SOVIET BLOC COUNTRIES IN THE FIELD OF ELECTRONICS.
2. TRANSISTOR AND TUBE DEVELOPMENT IN EAST GERMANY
https://www.cia.gov/library/readingroom/document/cia-rdp83-00418r005600760001-5

EAST GERMAN ELECTRONIC TUBE DEVELOPMENT
https://www.cia.gov/library/readingroom/document/cia-rdp83-00418r006500020001-6

THE ELECTRON TUBE INDUSTRY OF THE USSR 1955-60

Thank you Bruce et al for your kind words. The RCA 140 is is a beautiful masterwork. I have seen only two. One owned by a friend in HARPS and another example in good shape at Ktown.

Pardon the museum talk, yet I think the RCA 143 is very overvalued and does not have the quality of cabinet workmanship and balance that the 140 has. Sure, the 143 has the engineering and the more tubes the better.
My thing is balance of both. And what the 143 has in power, it lacks the cabinet beauty balanced with technology that the 140 does. As a member of this club I am simply reaching out and sharing opinions such as in the NEARC publication. I hope to do an article or website (thanks tuberadioland for the idea) soon.

Thank you Alan, as always, for reaching out. It appears to be a nice original example although I must pass. You do very impressive work and please do not hesitate to contact me with any other things that you have for sale this year.

Best:

Ian

Hello I was looking for a chassis no need.As I was looking at mine noticed two bakelite blocks missing.I do not know if it was common practice to delete these from the chassis when the cap went bad.Well I added a longer wire for reception and got something so it works thanks paul

1294. Philco 49-909 code 121

Yahoo group: NEARC_Radio
Date: 2017-01-29 22:52:59 UTC
From: TrainBee
Topic: 1294 Message: 1294

Hello,

I've opened up another can or worms with a Philco 49-909. Unfortunately, I don't have this in my Philco Service sheets file. The Rider's sheet seems to be missing the version I have. There are factory installed parts that aren't on the Rider's sheet.

Would anyone have a Philco Service Sheet for the 49-909 code 121 or a Sam's sheet 2-49, Set 55, Folder 17? My area of trouble, so far, is in the IF, Det and AVC section. I'm trying to find out what should be connected to the + end of the 2MF cap coming off of Pin 2 of the 19T8. There is a 200K 1W resistor, but it's not on the schematic and, by all appearances, is factory installed.

Thanks in advance for your help.

I realize this is quite a hike for nearly everyone to get to. Havertown is located outside of Philadelphia. But, this looks like a very nice piece to have, should you have the room.

Subject: [DVHRC] Large Zenith Radio/Phono Console for sale

Hi All,

The Club was contacted by a gentleman in Havertown looking to sell his 91-year old Grandmothers radio.

Its a Zenith Radio/Phono console. Looks nice, but is large & super-heavy. Cant find the exact model but looks to be from around 1930.

The house is under contract and it needs to go quickly, so I am sure he would be willing to take the 1st decent offer.

His name is David Silver and his email is stacymoe@...

Please contact him directly.

Thanks,
Jarret

Quite a beast. I have a similar Grigsby-Grunow-Majestic that weighs a ton. Radio has great sound. Platter is missing from record player. I have a Fisher mono preamp/tuner connected to the phono input so I can play FM and CD/iPod through it as well.

From: ianmgordon444@...
Topic: 1297 Message: 1297

Every once in a while I feel it is important to ask everyone for the one series of Philco I constantly seek.The BOL. I have a very rare 1942 flagship model restored yet I'm seeking a original replacement stylus assembly (with a very good needle) and the other is a 1941 model preferably restored except the 41-608. All looked at. Extra parts too. No lowballing and fair deals immediately considered.

Ian -

I've been less active in antique radios for a few years. But there used to be a really nice guy named Sylvain, up in Quebec, who was the go-to guy in cartridges and styli for antique sets. I don't know if he is still in the hobby, but you might trace him down on rec.antiques.radio+phono.

Hi All -

We received a message on our Facebook site inquiring on the value of this crystal radio from 1919. Apparently this was given to the owner by his father, and he' interested in its value. Does anyone recognize this radio and perhaps offer an opinion (or a good radio price guide for him to consult)? As there is only a single photo, it's not easy to make a call. He's located in Manchester, NH.

Regards,
John Gibbons

Hi Everyone!
Unless you're new to the NJARC, everyone knows about the $10,000 Crawford 3 dialer that was donated to the club that was like a "box of cracker jack" with the surprise inside.

Well, here's a story about a old television that went to a recycler in Canada……. Click on the link below..

1312. Hoe to remove the dial glass from a Philco 49-909

Yahoo group: NEARC_Radio
Date: 2017-02-24 22:14:52 UTC
From: TrainBee
Topic: 1312 Message: 1312

I'm hoping someone has come across this in the past. I'm working on the cosmetics for a Philco 49-909. I'd like to remove the dial glass to clean, and to clean the brass trim. The brass trim on the bottom of the dial is nailed from the outside and came off without any trouble. The catch for me is that there is a gooey substance holding it fast to the wood. It looks like it was a type of early foam rubber used to cushion the glass.

Can anyone offer any ideas on how I can get it out, clean it up, and replace the glass? Careful use of a putty knife? Would I be able to use contemporary foam rubber as a cushioning medium when I reinstall it?

Thanks.
Joe Devonshire

These are not the photos of my cabinet, but look very similar.

Topic: 1312 Message: 1313

Joe,I have no experience with that model, but based on your description of things, I'd try this:Warm it up a bit with hair dryer and see if you can ease a thin blade in there. My preference for such delicate tasks is an artist's spatula. Thin flexible blade and rounded end. Another "thin blade" with rounded end would be suitable thickness feeler guage. The idea is to let the heat soften things up so you don't have to pry much and break the glass!Speaking of the dial glass, as you probably already know, the numbers and printing on the back of it are VERY fragile by now. DO NOT make the mistake I did once and start blithely wiping back side with damp cloth! Careful cleaning with Q tips, not touching the printing is possible.

Subject: [NEARC_Radio] Hoe to remove the dial glass from a Philco 49-909

  I'm hoping someone has come across this in the past. I'm working on the cosmetics for a Philco 49-909. I'd like to remove the dial glass to clean, and to clean the brass trim. The brass trim on the bottom of the dial is nailed from the outside and came off without any trouble. The catch for me is that there is a gooey substance holding it fast to the wood. It looks like it was a type of early foam rubber used to cushion the glass.

Can anyone offer any ideas on how I can get it out, clean it up, and replace the glass? Careful use of a putty knife? Would I be able to use contemporary foam rubber as a cushioning medium when I reinstall it?

Thanks.
Joe Devonshire

These are not the photos of my cabinet, but look very similar.

Craig,

The #1 thing I've done so far is to clean the glass from the outside and "only" stay in the clear area inside. I'm a bit concerned about heating the glass due to the material that is used to create the dial design. I don't know if it will bubble up, fracture, crackle the finish or damage it in some other way. I'm thinking that if I can stay to the far outside, I might be OK.

Stay tuned for further developments with the plight of the Philco 49-909.

Regards,

Joe Devonshire

Thanks for sharing, Joe.
It does make perfect sense to enable FM on the LTE modem on a smart phone. I imagine the reason is left disabled is the discretion of the carrier. With fixed volume data plans, overages are bound to be a good source of revenue. If FM is enabled, it would not be counted against the data plan. However, with "unlimited" data plans being introduced by VZ and AT&T, where overages are rate limited (but supposedly not charged), maybe there is hope it will be enabled one day.

OK....perhaps try heating just the spatula blade: stick in in propane torch flame a few moments. But that might be risky too. Trouble with projects like this is you don't have any second chances after a mistake!
How about shine and re-lacquer the brass trim and leave glass alone? If you want it out of there so as to strip and refinish cabinet....hmmm......maybe do a real good masking job on the dial glass and carry on with the cabinet. I've had success on still sort of OK finishes by just going over them with acetone-soaked rag. Remove just some and do a sort of "leveling" treatment (like "liquid sandpaper", which incidentally I've never used).
 Then you could stop with the acetone and use paste wax and be done, OR go ahead and do a spray lacquer job---good masking job on dial should hold OK. If you do get to spraying, use this trick to avoid runs: clamp support board(s) on your bench and spray only horizontal surface--one at a time. Lacquer drys in minutes, so not a lengthy process to do, top, front, left side and right side individually while horizontal.
Anyway, that's my two cents worth. Have fun!

I wish everyone the best for the show. I know it will be great and I certainly would have wanted to be there. For me, it's about one good thing to get per show so here we go.

If any fellow members were planning on bringing any of the attached to sell, I would appreciate pictures of your unit and an asking price asap. I can arrange cash pickup at a later date.

Units must have: original speaker, knobs, dial system, factory sticker, no cracks, no repaint and preferably original finish. No problem with reproduction decals, plastic dial covers or refinish close to original. Restored and / or working a must and near excellent physical condition.

I never low ball or flip. I buy at prices lower than Ebay.

Ian M. Gordon

Guess we have a generation of kids who can play games on their iphones mommy and daddy are paying monthly bills for, chatting with "friends" on Fakebook, but couldn't hook up a doorbell without reading directions printed in four languages.I learned optics and made telescopes, microscopes, opaque projector to show Sunday cartoons on a screen when I was 7 to 10yrs old with chipped lenses from Edmund Scientific in Barrington, NJ.--now gone. To teach my grandkids I'll have to dig up lenses and stuff from my supply and draw up diagrams and stuff. Still have the heavy brass 12 power surplus telescope I got from Edmund for $15, looked at Sputnik with it in '57 and then used for spotting scope small bore target shooting through HS and college.... Speaking of which, imagine the excitement it would cause taking your gun and ammo to school Fridays and keeping it in wall locker for practice on the HS range after school--and that was right in DC suburb Bethesda, MD.
RADIO SHACK. One store still left here--Rochester, NH. I always like to tell store clerks how I still have my first purchase from Radio Shack in late 50's when they had single location (Commonwealth Ave., Boston) and mailed out flyers): pair of Stromberg Carlson coax speakers, $39.50 ea. 15" woofer rated 100W, 3" coax tweeter rated 32W. Still in the 8 cu ft bass reflex enclosures I built for them and ran with 28W Eico tube amp.....
Soccer games and martial arts classes these days----what ever happened to dad and son making a wet cell with carbon rod and piece of zinc in a Mason jar?
Like my physicist dad commented to me sixty years ago: "not all progress is forward!".....

Hi Craig,

I'll second most of that. Back in the early '70's we wouldn't have gotten away with a rifle in the locker. On the other hand, your are right on. BTW... Edmund isn't really gone. They are know known as Scientifics.
Look here: https://www.scientificsonline.com/page/about-us
Long before they closed the store, or even had it in mind, I made the trip to Barrington, NJ. We lived about an hour from there. It was like walking into a dream world.
I was a frequent customer of RS. As for kid's not knowing how to do much of anything other than mindless thumb twitching, I have a whopper of a story that I can't put into the ether involving a relative.

Joe,Put the "whopper" directly to me if you wish craig.hardy@prodigy.net.
Yeah on Edmund--thought I'd seen they were still there but not like old days. Story of Mr. Edmund is good--getting war surplus out there for educational projects, etc. Problem is, like Radio Row in NYC---after 70yrs the WWII stuff is getting scarce. Radio Row got demolished to build the world trade center, but I DID walk it once in early 60's. Father in law pointed me to it. He'd started his radio/TV shop in Yonkers in 1930, then moved out to Westport and continued til retiring to Waterboro, ME in 1970.
Hope your wife is better--Bruce told me why you couldn't make it to XVIII.

Hi Craig,

I'll second most of that. Back in the early '70's we wouldn't have gotten away with a rifle in the locker. On the other hand, your are right on. BTW... Edmund isn't really gone. They are know known as Scientifics.
Look here: https://www.scientificsonline.com/page/about-us
Long before they closed the store, or even had it in mind, I made the trip to Barrington, NJ. We lived about an hour from there. It was like walking into a dream world.
I was a frequent customer of RS. As for kid's not knowing how to do much of anything other than mindless thumb twitching, I have a whopper of a story that I can't put into the ether involving a relative.

1329. RCA K-80 Speaker -- Free

Yahoo group: NEARC_Radio
Date: 2017-03-13 20:23:48 UTC
From: k8zhd@...
Topic: 1329 Message: 1329

I parted out a derelict RCA K-80 console a while back and the only thing I have left of it now is the huge 13-inch diameter speaker with attached output transformer. It's in good shape, with the field coil and output transformer both showing correct resistances. The transformer matches a pair of push-pull 6F6's, and the spec was for 5 watts, so the sound possibilities for this big ol' thing are pretty awesome.
Drop me a line if you're the next home for this baby.

Mark Nelson

1330. Philco 60 info requested

Yahoo group: NEARC_Radio
Date: 2017-03-14 12:20:35 UTC
From: TrainBee
Topic: 1330 Message: 1330

I'm currently working on a Philco Model 60 of the September 1934 production run. Thanks to Ron Ramirez's site, I was able to determine that. There's wealth of information out there on the early Philco's and, in particular, the Model 60.

My dilemma is that at some time in the past, someone had the bright idea to replace some of the capacitors and do some rewiring. They thought they were being slick using Orange Dips and bridging the modules. All that effort and it still didn't work. No wonder, they didn't take all of the modules out of the circuit that were bridged you can guess the rest. I'm getting an idea of what was done, but I'd like to have a better idea of where things are supposed to go. I am rebuilding the capacitor modules and the metal box with the 4 capacitor package inside. The 4 cap metal box module had it's wires chopped off.
Also, rather than unsolder what was connected to the tabs of the bakelite cap modules, they were cut off. There was enough left so that I can make a clean contact when I reinstall them.

It helps to have things where they're supposed to be under the chassis so it operates better. Wiring in the right place, etc... I have the tube pins identified, but where I'm stuck, is how to identify the connections for the IF coils. The coils have not been removed and it doesn't look like they ever were. I'm just not sure they weren't tampered with.

I took pictures of the underchassis before I started to work on it. Does anyone have any pictures showing an original and restored underchassis of a Philco Model 60? What they buggerd up were the
connections to the 6A7. If I could get some detail for that, I can figure out the rest. Pin 3 seems to be the bigger issue. Where do the 2 resistors coming off of Pin 3 go?

Thank you for any help you can give.

Joe Devonshire

Hi,

I was reading on a thread about an old documentary where someone asked why people talked differently in old movies, radio broadcasts and they mentioned part of it was due to the characteristics of radio. Someone then proceded to provide a video that explained it in more detail:

https://www.youtube.com/watch?v=Gpv_IkO_ZBU

Why Do People In Old Movies Talk Weird?
www.youtube.com
It’s not quite British, and it’s not quite American – so what gives? Why do all those actors of yesteryear have such a distinct and strange accent? Learn more ...

I always assumed it had something to do with the microphones and sound reproduction technologies of the time, but it never really occured to me that it was something that would need to be taught. Did any of you ever have to learn to use this accent? Did any of you have classes in school for it? It doesn't sound like it was taught long, but it is fascinating.

1335. Re: [NEARC_Radio] Fwd: [NJARC] Trans-atlantic\Mid-Atlantic Accent

Yahoo group: NEARC_Radio
Date: 2017-03-15 23:15:50 UTC
From: Craig Hardy
Topic: 1334 Message: 1335

The thing I like most about old movies is you can hear them! They tended to use a "stage voice" instead of the conversational level of practically mumbling in new shows where I have to wear headphones to catch all the dialog. The "madcap" comedies of the mid 30's are a little quick to follow, but still much better than modern fare! Which is why I like old movies and collect them--have over 70 Hollywood features on 16mm (including "Casablanca" and "Going My Way") and some on 35mm in Cinemascope. Sure, I could show DVD's through my DLP electronic projector on the 10ft screen, but I prefer the "magic" of watching acetate running through the sprockets on the dual projectors in my soundproofed projection booth...

I recall one of my Public Speaking teachers in high school talking about appropriate radio diction, but I don't think it sank in. Oddly, though, I recently listened to the talking page of our HS yearbook which I co-voiced, and, compared to the ads I voice today, it sounded "old timey", like who is that guy?

Hi, at Counting Sheep Antique store today where i bought a GE C-64 cockdock radio (all american 5 base i think). The gent there said he had a wire dictator that was his dads. Thought I'd share it in case there was any interest with this group.Btw, loved the radio show. Met a lot of really nice folks.
Peace~Richard

I'm sure others have seen the announcement that the Shack is back in Chapter 11; this time it's apparently 'real' and the stores are closing down. Happened across the location in Newburyport today, and they have everything marked as 20-50% off. Parts wall components are generally 50%, so the prices are reasonable if anyone is interested.

Closures will happen as individual stores' leases run out, apparently.

Happy hunting!

I spoke to the store manager in Rockland, ME yesterday. This was a week after I last saw him. So far, there's no news and the Corporate people aren't talking to the field. All he knows, is that
he's to keep the sale going. About the only things worth going to the store for are the small drawer things. I'm holding off on the bulbs as even with 50% off, they're still over priced. The resistors are competitively priced if you get the 5 in 1 package.

I picked up a few small items and grabbed a low end analog meter to
throw into my car, but there's not much tof real use. It's really sad. I was
a Shack employee in the late 70s; we were all electronics buffs who built
projects and helped repair gear. It started going downhill with electronic
toys then, and there's just nothing left.

E.S.S. and You Do It to the rescue...

cheers,

Dick Joltes

1346. Detrola 429 speaker

Yahoo group: NEARC_Radio
Date: 2017-03-22 01:33:17 UTC
From: Gary Norman
Topic: 1346 Message: 1346

Does anyone have a Detrola 429 series parts chassis with a good electrodynamic speaker that they would be willing to part with?

I’ve taken on the job of restoring one of these for a friend. So far have completed the recapping – all 7. And rewired the on-off switch and added a polarized plug to eliminate the hot chassis issue. All that’s left is the speaker.The one currently there works – it just does not sound very good. The cone had several tears which were sloppily repaired sometime in the past.

Thanks,

Gary, W1PG

1347. Philco 60 Antenna Coil - Open

Yahoo group: NEARC_Radio
Date: 2017-03-22 21:29:17 UTC
From: TrainBee
Topic: 1347 Message: 1347

Does anyone have any experience with rewinding an Antenna Coil (IF) for a Philco 60? How about another Philco of similar vintage? I have one that has an open winding between terminals 2 and 3. If not, have you ever rewound a coil and could give some advise? I'm pretty sure I have the problem narrowed down. There is no signal generated by the LO and no voltage readings from either terminal 2 or 3. The ohms readings between the top lug and # 4 isn't close, but at least there is something. I'm also getting a reading between terminals 1 and 6. Once again, it's not close to the schematic.

I'd prefer to not rewind the entire coil. But, if in your experience, this is what's needed, then I'll give it a try. I've seen the info on Ron Ramirez's site and I'm hoping I can get some more shared experience from our members. The Philco 60 I am working on is from the Sept. 1934 production run. It incorporated quite a few of the improvements that Philco had for this radio.

Thanks in advance for your help.

Hi Joe, I am not sure if this helps, but I had a similar issue on a 60 that I did a few months ago. According to my notes, the winding that was open was the outermost winding, and I was able to rewind it with approximately 18 turns of 39 AWG magnet wire.

Russ,

Are you talking about the coil wrapped near the bottom (bulges out over the coil). I'm pretty sure that's the problem. Do you recall what the Ohm's readings were when you had yours open?
That might help save me from chasing things that aren't there.

Thanks,

Joe

Joe, when I was all done with my winding, I measured 5 Ohms. I have attached a picture of the coil. From your description it sounds like your coil has the same issue. Unfortunately, I do not have a photo with the winding removed, but it was the small coil wrapped around the insulating material on the big coil.

Russ

Hi Russ,

That's it exactly! I'm going to try some conservative approaches first. Scrape some of the coating as it comes up to the lug and then reflow the solder. If that fails, then I'll have to take it one step further. I'll pass on my results as I get it done.

Thanks again.

Joe

1353. By way of introduction

Yahoo group: NEARC_Radio
Date: 2017-03-23 00:19:30 UTC
From: psilver@...
Topic: 1353 Message: 1353

Just wanted to say thanks for allowing me to join this group... I am an avid collector of antique radios, mostly ham and short wave radios, and mostly from Hallicrafters, Hammarlund, National, and Drake, although I also have some from Collins, Heathkit, and RCA. Additionally, I collect and restore old transceivers, including Yaesu and Kenwood from the Japanese world. I do a good deal of restoring these, and am always learning.

My curent project is a complete restoration of a Hallicrafters SX-16 receiver. This hower has been interupted by the breakdown of a Yaesu FT-902DM transceiver which was working fine until just a couple of weeks ago, and I want that back on the air as soon as I can get it there, while awaiting some parts for the Hallicrafters receiver.

So that is my interest. I am not technical by education or trade, and am mostly self taught, although I have some good "Elmers" as we hams call mentors.

I look forward to learning from you guys, and sharing what ever it is I do happen to have discovered through the hard knox school.

Thanks,

Paul

1354. Radiola Parts Interchangeability Question

Yahoo group: NEARC_Radio
Date: 2017-03-23 10:46:17 UTC
From: ne1s@...
Topic: 1354 Message: 1354

Would anyone here happen to know if the three-section variable condenser and associated drum dial (especially the drum dial) from a Radiola 62 is interchangeable with same on a Radiola 18? They sure look identical upon casual observation.

Thanks!
-Larry

1355. Philco 60 Antenna Coil Fixed

Yahoo group: NEARC_Radio
Date: 2017-03-23 15:31:41 UTC
From: TrainBee
Topic: 1355 Message: 1355
Attachments: 3 described; binary payloads are missing from this source WARC

I finally got it fixed. This version of the Philco 60 antenna coil has 5 lugs along with a grounding lug that mounts to the chassis. It took several hours of looking through magnifiers and carefully peeling away crud, wax, etc... from the lower end of the coil. I did determine that the problem was with lugs 2 and 3.

To get started, I removed some of the wax with a finger nail so as not to remove any of the coating from the wire. I found a part of the winding that was missing some coating and at that point, I did an ohms test from lug 2 to the bare wire. Bingo, I found the wire, but not the section not connected to lug 3. I continued along the same line as the wire I found and just a few millimeters over toward lug 3, there it was. An extremely thin piece of wire in a spec of the wax that came off. At this time, a part of the loop was loose, but not unwinding. Good! Just a little more toward lug 3, there was something I didn't expect to see, a solder joint with a short tail.

At this point, I traced the wire coming from lug 3 into the coil. Carefully removing the wax, I was able to trace it to a break point close to the solder joint I just found. When I matched that short piece of wire I previously found, it matched exactly the gap that was missing. The next task was the most delicate part of this entire repair. How to reattach it all?

Since there was a good amount of the lead wrapped around the lug on the coil form, I carefully unsoldered the lead from the lug and there was enough to match it up with the tail from the coil. In the attached photos, you will be able to see the repair I made.

Many of the responses I received from you expressed that it was likely a break at a turn to the lug. You were all right on Point! This repair from removal to reinstall test took about 4 hours. I have no way of knowing how long it would have taken had I had to rewind this part of the coil. I took the most conservative approach I could to avoid doing more damage. Fingernails and toothpicks make great tools to get the wax off.

As I was working on this radio, doing research and employing what I had learned, what I've discovered, is that this radio has an enormous amount of information out there. From the information from Ron Ramirez and the PhilcoPhorum, along with many others, you can confidently make effective repairs to this radio. When this radio was presented to me, someone had done some work on it, but it was butchered with orange dips, clipped terminals on the capacitor blocks and incorrect electrolytics. The owner told me it briefly worked when they bought it. No wonder.

Last night, as I gave it its initial test, it came to life with a great sound. In my basement here in rural Maine, with about 3ft of wire as an antenna, I was able to clearly hear WCBS 880 from NY just as if I was in NYC. CFZM 740 from Toronto was weak, but perfectly readable. I barely had to do any alignment. Now, I'm going to put some sealer wax over what was repaired, reinstall the coil and let it do what it was designed for, play.

Attached are some photos of the coil.

Thanks again for your help.

Hi John,

I'm about ½ way up along the coast in Maine. Geographically, I'm exactly ½ way between Augusta and Rockland / Camden. The radio side only is something I would consider as long as it is all tubes. My previous experience with Zenith, from that time period, is that they suffer from the dreaded "Silver Mica disease." I'm of the opinion / mind that you might as well rebuild the IF's if you are going to work on it. I haven't yet been able to avoid doing this. The rebuild is not all that difficult, but it takes a lot of time and steady hands are a must.

So, after all of that, can you send some more information on this radio? Portable, console, etc...? I'd like to know what I might be getting into.

Bruce,

It just might be a Knight / Pacific / Allied (from Chicago). At least with the Knight / Pacific / Allied, the names are on them. It could be a knock-off for a department store. The patent badge looks very similar to a Knight that I have. My Knight also has a speaker facing the top. Different grille work. I looked through the Allied catalogs from 1936 to 1939 and only saw one that might be close from 1936. The dial is wrong and it only had 4 tubes. The Knight that I have has the following tubes: 80, 42, 75, 6D6, 6A7.

Regards,
Joe

In the lower left corner of the license sticker, it looks like it says "plant A", in which case it was probably made by Clinton Mfg. Like Al says, a tube lineup might help to id.

Stein's tabletop radios, volume 1 shows Clinton model 256 which looks extremely close, but it is listed in the book as a wooden model.

I think everybody is right, but I think you nailed it Howie.
Although Stein states it is wood, that Clinton picture is the correct one, and that is definitely metal with simulated wood finish.
I think Clinton made these for other companies as it shows up in Stein#2 as an Air Master, and I believe I've seen it thumbing through an Allied or Lafayette catalog too.
Under close examination, I see the word CROYDON on the top back edge of the radio.
Thanks to all,
Bruce

1374. Air King A-511 IF Coil

Yahoo group: NEARC_Radio
Date: 2017-04-27 01:59:26 UTC
From: TrainBee
Topic: 1374 Message: 1374
Attachments: 3 described; binary payloads are missing from this source WARC

I need to fix or replace an IF coil for an Air King A-511

The coil is wrapped like a turks cap with 2 strand, cloth wrapped wire. It looks to be about 33 gauge. Does anyone have any experience in unwinding these? Is there an easier fix such as a replacement?

Attached are some pictures of the coil and the schematic. The IF is #31. The Sams sheet gives the coil a spec of 15.1 ohms.

Thanks for any help.
Joe Devonshire

1375. Wanted: 1937 Zenith "Big Dial" Console

Yahoo group: NEARC_Radio

From: radioorphanage@...
Topic: 1375 Message: 1375

I met Peter Stohrer at a HAM Flea Market a couple of weeks ago.
He is looking for a 1937 "150"series Zenith Console.
These are the sets before the shutter dials that have the larger black dial and the knobs on the corners of the dial. Like 10S153, 8S154, 10S155, 10S157, 12U158, or 12U159.
He is looking for a piece that is working and a relatively good finish, original or refurbished.
He can pick it up at Spring Brookline or make other arrangements.
Contact him directly at the email below with what you have and what you would like for it.

Bruce and our NEARC friends.

I thoroughly agree. There are some great productions on YouTube out there. From Training, to "How to" videos, to historical productions, YouTube has really proven itself. I'll add this to the list of add on's for our next and future issues.

As we also have licensed hams in our organization, I'd like to hear from them as well for RADIO NEWS. The next issue will be in production starting in June. Their experiences with vintage communications gear, listening / DX experience, things they / you do that work(s) across the board for Antique Radios, Vintage Electronics, etc... would be very welcome.

Are you using one of those new Digital Microscopes to get past the difficulty of seeing some of those had to see parts. I'm thinking of getting one when working on litz wire coils with breaks. Cold solder joints that are hard to see would be another use. You get the idea.

Have I piqued your interest? Well then, write an article. Better yet, write an article with photos. If you're up here in Northern NE, Black Fly Season starts next week. You have all of May to get it done. For you Black Fly Breeders, it doesn't take all day to wrangle up enough Black Flies for next year's breeding stock.

Back to Bruce's thought, if you're a holdout for receiving the On-Line version of RADIO NEWS, NOW is the Time to change your subscription to the On-Line version. You just missed a great color issue that Alan and I put together. WE, meaning you as well, can get an even better production out to the NEARC members from the production staff with your help. Your RADIO NEWS production staff does rewrites, photo editing, layouts, and a lot of other things to get RADIO NEWS out to YOU! We just need you to do your part. Subscribing to the On-Line Version saves NEARC money (Your Membership Dues) and the Staff from lugging 200 copies and incurring paper cuts. Do you want to help with the Mailing? If no, well then, it's time to do your part.

Please continue to send your articles to: editori@...

Regards,

Joe Devonshire AB1YO

1379. Theatre sound

Yahoo group: NEARC_Radio
Date: 2017-05-01 02:39:55 UTC
From: craig.hardy@...
Topic: 1379 Message: 1379
Attachments: 1 described; binary payloads are missing from this source WARC

The youtube and comments on early theatre loudspeakers touches on a subject close to my heart!
For a number of years, starting in 1994, I helped a friend operate one of the last of the grand old theatres--the IOKA in Exeter, NH. Opened in Oct 1915 as a venue for screening D W Griffith's "Birth of A Nation" in New Hampshire. A 600 seat theatre with 88ft throw onto a 38ft silver screen, pair of dual shutter Brenkert's in the booth, with Ashcroft lamphouses running 8mm pos and 7mm neg carbons at 70 amps, about 80,000 candlepower. Unfortunately the place has been closed for last few years.
Owner Jim had modern sound system: Dolby 5 chan with 400 watts.

NOW to the point of my mentioning this: to best of my knowledge just about all dialogue in modern movie is from left and right front channels. A plane or vehicle coming in from rear and passing over, or someone arriving on scene from rear.....yeah maybe some surround sound effects are good for that. BUT most of the time there are just inane clunks, bangs and thuds coming out of the rear channels---NOTHING to do with the movie in my opinion. Just adds confusion. Screen a movie alone after hours with no paying audience present, I could totally turn off all but left and right front channels, reduce master volume by a third or more and with my glass ears understand the movie better! An AT & T engineer commented to me, "Craig, without that garbage from rear speakers, today's generation out on the street afterward would say they didn't like the movie, but couldn't tell you why!"

Old theatres like the IOKA, built in days before electrically amplified sound, were shaped to direct sound from front of room--sort of like a megaphone.
With the advent of "talkies" about 1926-27 the sound engineers had to deal with echos that made movies hard to understand. Carpeting the walls helps, plus the upholstered seats, and all the soft bodies of audience helps.
But the REAL answer was large horn loaded speakers. The size of the mouth of a horn speaker determines the lowest frequency that will exit it, and if I'm not mistaken, to deliver 30 hz the horn mouth has to be about 14 feet.
SO that's exactly what they did in the grand old theatres! The theory went like this: get the primary wave into their ears before the secondary waves (echos) arrive and you WILL have speech intelligibility with your movie!

Not sure where I read above details, but some of it is covered in my handy dandy copy of the Radio Engineer's Handbook, second edition, copyright 1935. Attached image of couple pages.

As Columbo would say, "one more thing".... regarding first "talkies", does everyone know the sound was on a disk, not on the film?
VitaPhone: 16" record, turning at 33 1/3 rpm (20yrs before we had that speed at home!), and played from the inside out. Very rugged turntable, driven through gear train from the main projector motor, but NOT synced to film. A friend who ran VitaPhone in Danbury, CT in those days told me they had a "three strikes rule" in the booth: if sync was out they kick the machine to make needle jump a groove--it might jump in or jump out, you took your chances--then check the screen. If three kicks didn't get sync acceptable they had to stop,

rewind and restart the 1000ft (10 minutes) reel and restart record while audience waited in the dark. Told me, if sound-on-film hadn't come out in few years like it did he thought sound movies would not have lasted....

1381. USB Digital Microscope for Radio use

Yahoo group: NEARC_Radio
Date: 2017-05-02 01:20:43 UTC
From: TrainBee
Topic: 1381 Message: 1381

In the April 2017 issue of QST there was an article reviewing a USB Digital Microscope. I like the idea of using one if there is a circuit board that's hard to view, or a coil you're trying to get a closer look at.
I can't see it as an everyday tool, but it does have a legitimate use in radio work,. Has anyone bought one of these and what are your impressions?

Joe Devonshire

Joe,et al,
I bought them for the grandchildren for Christmas.
Go to www.Newfrog.com .
For under $20 including shipping, they will ship you one right out of China.
Works slick, but I'll worn you, you'll want to buy a dozen other things when you look around the site.
As Doug's article in RADIO NEWS shows, you'll realize the USA lost the war that most didn't even know we had.

From: Russ Tine
Topic: 1381 Message: 1384

Joe, I have one at work that I use on occasion. It works well, though when away from my desk and PC it is not as convenient of a loupe. However, when I do use it it has been very helpful in that you can snap a photo with it and easily share. If you look for one, get one with a stand. I have never brought it home to try, here at home I am pretty happy with my magnifying visor.
I think for the price of these, it is worth trying.
Russ

Folks,

I've been working for weeks to get a handle on this unusual tube. It's pretty much stumped the radio community, AWA, TCA, Milsurplus, etc.

Best guess is that it was made for some sort of laboratory demo. So, I drew a deep breath, and fired it up.

SEE: http://www.rtm.ar88.net/tubes/mystery/Mystery%20Tube.html

The electrons seem to want to take the long way around the metal prism, on their way to the plate.

Still looking for an explanation.

Al

Hi Craig,

I'm looking at it as a tool to help with close up work. I have the magnifier visor that does a good job with magnification, but to solder when working that close is dangerous. I'm not Pinocchio, but I'd rather not get it burnt.

Thanks,
Joe

Subject: Re: [NEARC_Radio] USB Digital Microscope for Radio use

USB digital microscope---just looked them up. Hmmm.....pretty neat! Just a nice good res imager, which they seem to crank out like Keebler's cookies these days, and then look at image on any ole big flat screen, right?

Subject: [NEARC_Radio] USB Digital Microscope for Radio use

In the April 2017 issue of QST there was an article reviewing a USB Digital Microscope. I like the idea of using one if there is a circuit board that's hard to view, or a coil you're trying to get a closer look at.
I can't see it as an everyday tool, but it does have a legitimate use in radio work,. Has anyone bought one of these and what are your impressions?

1388. BIG CLOSEOUT SALE ALERT

Yahoo group: NEARC_Radio
Date: 2017-05-15 15:49:24 UTC
From: craig.hardy@...
Topic: 1388 Message: 1388

At jukeboxparts.com in Orange, MA, BIG sale of EVERYTHING in the place. John is tired of the cold and he and wife Kim are moving to Florida. His 40 years of accumulated stuff fills an old 3-story mill building, and I mean FILLS: jukes, speakers and parts lined up everywhere and eight foot high steel shelving loaded with smaller stuff. Even if you're not a juke enthusiast, there's stuff like speakers and amps everywhere. Most of it pretty junky, but I did notice a number of jukes that looked pretty complete and restorable. Also probably enough records to half fill your house to the ceilings.
Last Fall his "closeout sale" notice said closing Dec 15, but obviously that didn't happen. Instead of filling your car or truck, you CAN just scrounge a few items and buy for reasonable prices. I was over Saturday and found the amp cards I needed for an NSM CD juke. He told me he'll have one more closeout sale 10 to noon this Thursday, and then said salvage trucks are coming Monday (a week from today) to empty the place completely---"vacuumed out" was his term. Will become an antiques place. Here's his website notice. Be sure and click around to see pics!

1389. Help with WOODEN DetrolaSuper Pee Wee 219

Yahoo group: NEARC_Radio
Date: 2017-05-16 19:54:50 UTC
From: radioorphanage@...
Topic: 1389 Message: 1389
Attachments: 5 described; binary payloads are missing from this source WARC

I picked up this wooden Detrola Super Pee Wee 219 at Kutztown last week.
I find plenty of pictures of Detrola 199 and 219s - mostly in Plascon or Beetle, and yes, the "boxy" rectangular wooden 199.
Has any one ever seen this wooden variant?
Obviously, I'm looking for a picture so I can replace the bars that went over the speaker grille.
Any insights appreciated,
Bruce

Bruce,

This is all I could find. Could it be that the cabinet was for a model or custom made? It appears that the bars were vertical on your piece or an insert. Also, the cabinet looks to be very clean. For a 78 year old radio, I'm skeptical. The tag on the bottom signed by Luther, may be the clue to a custom cabinet.

Regards,

Joe

For model 219 Pee-Wee, Detrola; Detroit (MI):
Image courtesy of Mark V. Stein for Radiomuseum.org use only. From Table Top Radios Volume 1.

Country:

United States of America (USA)

Bruce,
I also believe this is a custom case. The original Bakelite or plaskon probably cracked and an avid woodworker decided to build it.
I've actually done this on one occasion

Hi Paul,

The WX was great on Thursday and Friday. It looked like there was a good crowd on Friday. I was there from about 10:00 or so to about 1:00 PM. I came back later and it was pretty empty by then. I wasn't there to buy any radios, although if one caught my eye, it would be here in Maine right now. I did manage to find some of the parts I was after and met a fellow who is reclaiming the parts from old chassis. The one thing he didn't have were IF and RF coils. I hope after talking to him for nearly a half hour, he's convinced it's something else to be harvested.
Bruce and Tom had their tables set up and seemed to be doing well. I have a few pictures and I'll see if I can get them into the next issue of Radio News. For the TV side, I saw a few more than usual. I saw a Hallicrafters in a wooden cabinet that looked in VG condition. The other one wasn't so good. I keep looking for the Hallicrafters TV that fit into the same cabinet as the SX-42. I wonder if it's as heavy as the SX-42. BTW... I did see an SX-42.

For those of you who couldn't make it to Kutztown, here's a link from Bob Bennett, AKA RadioWild https://www.youtube.com/watch?v=s8efgbHmdzw

1399. Riders, Silvertone console, magazines to Brookline Swapmeet

Yahoo group: NEARC_Radio
Date: 2017-05-23 16:58:16 UTC
From: k8zhd@...
Topic: 1399 Message: 1399

I am cleaning out for our move, and have several bulky items that I'll bring to the swap meet in June, but it'd be nice to know if there's any chance I'll be able to find them new homes there.

So, I have a Silvertone 1828 console, in decent shape. This is a rare model that doesn't show up in most literature. It has six type 45 tubes in it! I have a photo of the cabinet but I haven't figured out how to attach it.

I've got a bunch of Rider's TV manuals, free to a good (or any) home: Volumes 1 and 2 (book size); Volumes 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 14, 15, 16, 18 (folio size). Free.

And I have sets of magazines like Radio & Television News and Radio Electronics, mostly complete years, from about 1948 through 1955.

Please let me know if there's any interest, & get in touch with me if you want more info.

1408. Collection of early Heathkit's for sale

Yahoo group: NEARC_Radio
Date: 2017-05-25 20:48:46 UTC
From: Steve Siter
Topic: 81 Message: 1408

I have hundreds of Heathkits (mostly pre 1960 and mostly test equipment) including some rare pieces. Transmitters and receivers are gone and audio equipment is mostly spoken for (my son). There are many parts sets. Included is a "mock" V3 battery powered VTVM which was never put into production.

As they say, "health forces sale". I have Parkinson's Disease and it has become very difficult to solder, etc. (I'm also trying to avoid "divorce forces sale" as I'm under orders to down size.)
I can put together a list and/or send photos to interested parties.

1409. Re: [NEARC_Radio] Collection of early Heathkit's for sale

Here is my list of Heathkits for sale. I've tried to avoid mistakes, but it's a lot of data so there might be some errors. Of course, I'll fix any listings that need fixing. All prices are plus shipping. I'd prefer local pickup, the collection is in Paxton, MA. If you do come to pickup things, you can look at other stuff I'm selling. I will include manuals that I have. Not all pieces will include manuals. Reasonable offers encouraged and considered.

Other stuff from previous listings (21 Feb. 2015):1. ARRL handbooks, all years of the small format, 1926 (the reprint) thru 1978; plus scattered subsequent years in the large format in various conditions, fair to excellent. Other radio related books
2. Hammarlund collection; HQ-140, HQ-150, SP-200, BC-1004 with orig. PS nicely restored, several BC-xxx/SP200 parts sets and PS's. Manuals and other paper. (HQ-129X and HiQ battery set SOLD)3. GPR-90-RX SOLD4. Extensive early Heathkit collection; see details above and attached PDF listing
5. Nicely made homebrew six meter 250 Watt amplifier, two meter 250 Watt amplifier, common PS & meter panel with rack cabinet. Similar units under construction for 1.25 meters and 70 cm and spare 4CX-250's included.
6. H.H. Scott shipboard entertainment receiver SOLD

Additional items (from 15 April 2015): 7. Telewave model 44A Wattmeter, 20 mHz to 1,000 mHz. “N” connectors, Ranges 5, 15, 50, 150 and 500 Watts, forward and reflected. With case and manual. Very good to excellent condition. Same size and ruggedness as a Bird Wattmeter but no slugs are required.
 8. Bird 50 ohm, 500 Watt dummy load, model 82A, good condition.
 9. Hallicrafters S-47 entertainment receiver, SOLD 10. Hallicrafters T-54 television with channel 1. Metal cabinet like SX-42 and SX-62.
       I had it working several years ago but probably will need recapping.

Yesterday a friend gave me this unit. He didn't have the heart to throw it away. I'm not interested because my preference is for older American made stuff.
Model SO 160Ua. According to Billboard it was introduced in Feb. 1961 and list price was $520. It is not working, but is in showroom condition. Only cosmetic flaw is cracked plastic dial plate over on far right than can easily be fixed. I removed a large pile of nest and blew it out with shop air. The main 1A fuse was blown and when I stuck another in there was a wisp of smoke and I immediately removed the fuse. So, if transformer is still good it probably needs a cap job and maybe some chewed wires under chassis. I didn't pull the chassis to inspect bottom.
Original owner's manual, showroom cardboard disc on turntable and other little paperwork still with it in an envelope. There's a 3 x 5 card with hand drawn tube chart, and note that 8 of the 10 tubes were replaced in Nov. 1972.
I'll bring it to Brookline if anyone is interested. Photos attached.

1414. 1961 Grundig Majestic console

A friend gave me this unit because he didn't have the heart to toss it.
It's Grundig Majestic model SO 160U a. Billboard says price first year of sale was $520.

Unit doesn't work but is in SHOWROOM condition. I removed a large nest from chassis and blew it out with shop air. Dial cord needs replacing--think a critter chewed it! But the "cheese cutter" tuning cap looks like new with no bent plates. A little card with hand drawn tube chart says tubes replaced 11-12-72 and there are x's on 8 of the ten tubes on chart. Original showroom stuff like the cardboard disc on turntable, owner's manual, un-packing instructions, etc. are in an envelope. ONLY cosmetic flaw is cracked dial plate far right, that can be easily repaired
The light goes on in changer compartment when it's door is slid open, but radio does not power up. The 1 amp fuse was blown, and when I replaced it I saw a wiff of smoke so I yanked the fuse immediately.
Could be some chewed wires and not the transformer---I didn't pull chassis to inspect underneath.
I will bring it to Brookline if anyone is interested. Let me know!

Subject: [NEARC_Radio] Re: Collection of early Heathkit's for sale [1 Attachment]

Here is my list of Heathkits for sale. I've tried to avoid mistakes, but it's a lot of data so there might be some errors. Of course, I'll fix any listings that need fixing.

All prices are plus shipping. I'd prefer local pickup, the collection is in Paxton, MA. If you do come to pickup things, you can look at other stuff I'm selling. I will include manuals that I have. Not all pieces will include manuals. Reasonable offers encouraged and considered.

Other stuff from previous listings (21 Feb. 2015):

1. ARRL handbooks, all years of the small format, 1926 (the reprint) thru 1978; plus scattered subsequent years in the large format in various conditions, fair to excellent. Other radio related books

2. Hammarlund collection; HQ-140, HQ-150, SP-200, BC-1004 with orig. PS nicely restored, several BC-xxx/SP200 parts sets and PS's. Manuals and other paper. (HQ-129X and HiQ battery set SOLD)

3. GPR-90-RX SOLD

4. Extensive early Heathkit collection; see details above and attached PDF listing
5. Nicely made homebrew six meter 250 Watt amplifier, two meter 250 Watt amplifier, common PS & meter panel with rack cabinet. Similar units under construction for 1.25 meters and 70

cm and spare 4CX-250's included.
6. H.H. Scott shipboard entertainment receiver SOLD

Additional items (from 15 April 2015):

7. Telewave model 44A Wattmeter, 20 mHz to 1,000 mHz. “N” connectors, Ranges 5, 15, 50, 150 and 500 Watts, forward and reflected. With case and manual. Very good to excellent condition. Same size and ruggedness as a Bird Wattmeter but no slugs are required.
8. Bird 50 ohm, 500 Watt dummy load, model 82A, good condition.

9. Hallicrafters S-47 entertainment receiver, SOLD

10. Hallicrafters T-54 television with channel 1. Metal cabinet like SX-42 and SX-62. I had it working several years ago but probably will need recapping.

National 10-1A, 1 to 11 meter coverage SOLD

Several boxes of early battery set tubes and parts.

Etc., etc., etc.

Thanks for looking,

From: TrainBee
Topic: 1418 Message: 1418

The WX is looking good for this weekend. Below is the forecast from the NWS for this week.

See you there.
Joe Devonshire

Extended Forecast for
Brookline NH

Detailed Forecast

Tonight
A slight chance of showers before 11pm, then patchy drizzle between 11pm and midnight. Patchy fog between 11pm and midnight. Otherwise, cloudy, with a low around 48. East wind around 5 mph becoming calm. Chance of precipitation is 20%.

Tuesday
Mostly cloudy, with a high near 66. Calm wind becoming southeast around 5 mph in the afternoon.

Tuesday Night
A chance of showers and thunderstorms between 8pm and 11pm, then a chance of showers after 11pm. Mostly cloudy, with a low around 54. South wind around 5 mph becoming calm in the evening. Chance of precipitation is 50%. New precipitation amounts of less than a tenth of an inch, except higher amounts possible in thunderstorms.

Wednesday
A 40 percent chance of showers. Mostly cloudy, with a high near 72. South wind 5 to 10 mph.

Wednesday Night
A 50 percent chance of showers before 11pm. Mostly cloudy, with a low around 53. Southwest wind around 5 mph.

Thursday
Mostly sunny, with a high near 72.

Thursday Night
Partly cloudy, with a low around 52.

Friday
A 50 percent chance of showers. Partly sunny, with a high near 73.

Friday Night
A 40 percent chance of showers. Mostly cloudy, with a low around 55.

Saturday
Mostly sunny, with a high near 73.

Saturday Night
Partly cloudy, with a low around 51.

Sunday
Mostly sunny, with a high near 69.

Sunday Night
A 40 percent chance of showers. Mostly cloudy, with a low around 51.

Monday
A 40 percent chance of showers. Mostly cloudy, with a high near 66.

Hi all,

At Brookline this Saturday I'll be looking for a drum dial bezel, ideally it would be identical to the one pictured (which is for a Pilot 1284 dial assembly). Failing finding that exact one, which admittedly is unlikely, I could make one work with a smaller mounting flange so that it wouldn't interfere with the dial shaft, and as long as it's for a vertically-oriented drum. If you have something you think might work, bring it to Brookline! Our cell# is 207-650-2239; I plan to arrive around 10:00 AM, as we have a fair drive to get there. Thanks!

1421. Tailgating at Brookline

Yahoo group: NEARC_Radio

From: radiohenry64@...
Topic: 1421 Message: 1421

FYI all,
I expect to tail gate at Brookline and will have for sale an early 80s vintage Peavey Heritage VTX 212 guitar amplifier with 4 Peavey 6L6s .This amp is in working condition. I have no guitar and tested only using a mic.
Also I plan to bring the chassis (with tubes) for a Philco 37-116 . If you are interested in a speaker for a Zenith 10A1 chassis contact me and I will bring that too.
Henry

Oops! Can't make it to Brookline!

I have 8 radios that I intended to sell, but I won't be able to make it. Photos below. For more info or more photos, email me, or call 207-646-3572 (leave a message). All of these radios are completely tubed, have speakers with good windings and unbroken cones, have all knobs, all good dials and dial glasses, are equipped with original internal antennas if they are supposed to, no "smoke". Cases are solid and in good condition (meaning no bashes, gouges, splits, cracks, or open seams), though they need various amounts of refinishing, with the exception of the Philco 20 where the grill has been broken. These are radios from my collection that I intended to restore, and I have simply run out of time.

These radios are located in my home in south coastal Maine (Wells is at mile 19 on the Maine Turnpike/I-95).

Majestic 92 - $30 - has been disassembled in prep for restoration, all parts are present, cabinet in good condition
Philco 20 - $150 - one of the iconic Philco cathedrals
Philco 41-280 - $100 - Philco's competition to the big dial Zeniths.
RCA Radiola 62 - $30 - one of early Radiola big boys
RCA 10 T "Magic Brain" - $30 - a big, handsome, eye tube radio
Stromberg Carlson 235H - $40 - excellent cabinet, with eye tube, missing the push-button assy
Zenith 12H670 - $150 - a 12-tube "steering wheel" Zenith - damage to front panel finish as in picture, but no damage to wood beneath
Zenith 12S265 - $300 - robot dial / shutter dial - one of the kings of Big Dial Zeniths - what more can I say?

1424. FREE! to a Good Home

For P / U at Brookline. I have TWO early homebrew radios that could make for parts or your own project. Best of all they are FREE! One would make a great X'tal set once it's restored. The bottom photo has plenty of early parts for your project.

I'll be wearing appropriate Radio attire, a Red T-Shirt with a Zenith logo. If interested, let me know and I'll hold it / them for you. Otherwise, first come and they're gone.

Pictures below.

1427. Wanted at Brookline: Nonworking Cathedrals and Tombstones in decent condition

Yahoo group: NEARC_Radio
Date: 2017-06-02 15:40:54 UTC
From: radioorphanage@...
Topic: 1427 Message: 1427

Linda Ellis and her husband refurbish/repurpose old radios with an internal mp3 player and speakers.
They are looking to buy about a dozen Tombstones and Cathedrals with decent cabinets, but bad chassis.
Expected price to pay is $100+/- depending on condition.
If you have something, bring it tomorrow. Now is the time to move that rusty chassis/bad coil set.
They also may be interested in nonworking "Drum" speakers like the Atwater Kents.
They will be there early, and if you let me know you will be bringing something they may be interested in, I'll point them in your direction.
Bruce Phillips

From: TrainBee
Topic: 1429 Message: 1429

Just a brief note of thanks to those who came out Saturday to the NEARC Brookline Swapmeet. And an extra set of Cudos to those who organized and helped with the event. This was our first trip to Brookline and it was just as we had hoped. We came away impressed, swapped some things and bought some things. It was also nice to be able to put a face with the names I so often get messages from. I also got to meet one of the authors of articles submitted to RADIO NEWS. Ken, your article still ranks high with me.

In the next couple of weeks, Alan Finger, Kathy and I will be starting work on the next issue of RADIO NEWS. NOW would be the perfect time to get those incredible stories of hard to find radios, repairs, hints and tricks, and your experience at Brookline in to us. We especially need PICTURES. How did you solve that problem with Silver Mica Disease? I have my way, but what is yours? Pictures can tell the story with just a short story.

Send your article to: editori@...

So, Best Regards to Bruce, Tom, Steve, Craig, and everyone else we got to meet this past Saturday.

Joe Devonshire
Jefferson, ME

BTW... those RED shirts with the logos (we had the Zenith logo) may be at RADIO XLIX on March 4, 2018. I'm working on the vendor to be there.

Good evening, all -

I received a message on our Facebook site from a woman in Newton, MA wishing to sell her console. I have to admit that I don't know the make and model from the one picture she has provided (German radios are more my specialty), but it looks to be in nice condition and is reported to be working. Her name is Joyce Tr and prefers to use Facebook to message for privacy. She's not indicated a price - just best offer.

For any of you not on Facebook who are interested, I'll be happy to serve as a proxy and provide your email address for her to contact.

Hope it finds a good home.

Regards,
John

The New England Wireless and Steam Museum will be open for visitors this Saturday, June 10th from 9:00 AM until Noon. The Museum is located at
1300 Frenchtown Road in East Greenwich, RI 02818

See the large number of exhibits including early electrical and scientific apparatus, spark transmitters, 1920's home radios, 1918 marine station and the 1908 Massie Wireless Station and building. Also see two buildings with restored stationary steam engines from around New England. Some engines will be run.

There will be an admission charge of $10 for adults and $5 for students. The Museum is only open to visitors a few times a year. Hope you can come!

1436. Free boxes for radio

Yahoo group: NEARC_Radio
Date: 2017-06-12 00:17:32 UTC
From: Howard Mariotti
Topic: 1436 Message: 1436
Attachments: 1 described; binary payloads are missing from this source WARC

This is an odd post, but, I have a bunch of 4 ply cardboard boxes that measure 29x10x10 inside. Great for storing or shipping something like a Radiola 18, Graybar, Freshman, or other casket style radio. Let me know if you could use and I will set aside.
Howard

NEARC Yahoo Group,
Since NEARC is heading toward a Vintage Electronics and Antique Radio Club, I thought many of you would like to see the video of my Capehart 1 Juke Box that NEARC Member Craig Hardy restored for me over the Winter. Link below.
Enjoy,
Bruce

Yes Barry,
The 400 is a beautiful piece. He has the cartridge out for repair.
After I get my Capehart and my CD Jukebox out of his place tomorrow, I believe it’s next in line for him to work on.
Bruce

Very interesting and historic recording.

I may take a drive up that hill in Paxton to see where FM began.

Thanks for sharing this, Joe and Bill.

The restored treasures are back at our prez's home!

Changed some fuses and couple circuit cards to get the 1992 NSM CD juke going that Bruce found down Maine. The 250W audio amp in this wall mount unit is impressive. Cynthia fell in love with it, so there it is next to the pinball machine. And you can see Bruce is happy to have his Amperion back and operational. Snapshot attached....

1443. Philco 41-250 Console For Sale

Yahoo group: NEARC_Radio
Date: 2017-06-18 20:38:49 UTC
From: jfxg@...
Topic: 1443 Message: 1443
Attachments: 5 described; binary payloads are missing from this source WARC

Good afternoon, All -

This is a follow-up to my posting a few weeks ago as I have more info and pictures from the owner.

I received a message on our Facebook site from a woman in Newton, MA wishing to sell her console. Apparently she needs the space for a sick relative and in a time crunch. She's not named a price, but I think she's at a point that she'd be willing to give this away or take a modest amount of money.

This is a Philco 41-250 from 1940/41 and appears to be in nice condition and reportedly working. Her name is Joyce Tr and prefers to either use Facebook to message or email her via simongolden05@gmail.com.

Hope it finds a good home. This is too nice to find its way to the curbside.

Regards,
John

1444. RCA 110K Needing a Good Home

Date: 2017-06-18 21:36:05 UTC
From: jfxg@...
Topic: 1444 Message: 1444
Attachments: 3 described; binary payloads are missing from this source WARC

Good Afternoon, All -

I thought I posted this, but I never received an email indicating that it was actually sent (I should have received a copy). Apologies if this is redundant.

A good friend is cleaning out her father's house and needs to find a home for an RCA 110K from 1940 that her Grandfather bought new (I believe it was called "The Presidential" as FDR had one in the White House). It looks to be mostly complete, missing one knob. The operational state is unknown (I told her not to power it up). She just wants to find a home for it, asking $50 OBO (very negotiable). If she can't find a taker, it may find itself pushed to the curb, which I would hate to see. I don't have the space to consider it.

It is located in Cambridge, MA. Her name is Carol and can be reached via email: ckale77@comcast.net mailto:ckale77@comcast.net

Hope this finds a good home. It looks restorable.

Regards,
John

1445. Group of Radios for Sale in Bridgewater, MA

Yahoo group: NEARC_Radio
Date: 2017-06-30 21:40:15 UTC
From: radioorphanage@...
Topic: 1445 Message: 1445

Rich Hinds cell 617-413-8160; email: par5270@gmail.com. lives in Bridgewater, Mass.

He has 28 radios left of my father's collection and would like to sell them to someone who appreciates them. He wishes to sell them as one lot.

This is the link to see pictures of them:
https://www.flickr.com/photos/67241865@N04/albums/72157682464757034
https://www.flickr.com/photos/67241865@N04/albums/72157682464757034

All of the pictures in the link are the fronts and backs of each radio.

He would deliver them to a NE state if that helped.

1446. Variable Cap problem

Yahoo group: NEARC_Radio
Date: 2017-07-01 00:58:04 UTC
From: TrainBee
Topic: 1446 Message: 1446

I've been trying to find a gremlin in an RCA T-62 radio. The variable cap is a 2 gang with each having the same capacitance value. I can't disassemble it due to the push-button assembly on either side of it. Using my magnifier, I can not see any contact on the blades.

Here's the problem... it is shorting when it gets just past half closed. I get the same reading on both sides. Also, I disconnected the leads to it so nothing else will influence it. So, aside from not having the blades short, what else could be causing it to short at exactly the same point on both sides? I have no loose metal bits, wire, solder, etc... visible on either side. Tonight, just to see if it would change anything, I tried compressed air to clear it out. Still no change. Since it shorts at exactly the same point on each side, I'm thinking it's possibly in the moving area of the shaft.

Does anyone have any thoughts on what else I could try, or to look for? I haven't tried any chemistry on it and that would be my last resort. If I can't clear this up, the radio will be mostly useless.

Thanks for any help you can offer.
Joe Devonshire

1447. Re: Variable Cap problem

Yahoo group: NEARC_Radio
Date: 2017-07-01 15:10:45 UTC
From: howieducky@...
Topic: 1446 Message: 1447

Joe, I'm away right now but I might have a parts chassis for that one. I believe the T-60 and T-62 are the same. I'll check when I come home next week. When I have the problem of shorts in variable caps that I can't find, I put an electrolytic (22@400v) across it, charge it, then watch for a spark while turning it (being careful not to shock myself). I've actually found metal burrs that I otherwise wouldn't have seen by using that method.

1448. Re: [NEARC_Radio] Re: Variable Cap problem

Yahoo group: NEARC_Radio
Date: 2017-07-01 16:11:12 UTC
From: TrainBee
Topic: 1446 Message: 1448

Thanks for the offer. Yes, the T-60 / 62 are the same with the exception of a center tap on the volume pot for the T-62. It wasn't all the hard to work on. To further narrow things down, I took the IF's apart and put new wire on them. The old rubber insulation was flaking off anyway. Everything is checking out other than the variable cap.
I'll see if I can't get something down along the bearings and wipe them out. I've already used my magnifier and high intensity light to get down between the vanes. Whatever it is, it's affecting both sides at once. The short is at exactly the same spot on both sides. The tapes for the pre-sets are all good, so I'd like to get this working rather than try to swap out another.

Thanks.
Joe

One trick that has worked more than once for me is to soak the entire tuning gang in 91% isopropyl alcohol then blow it out with compressed air. It may take awhile to completely dry after this before things return to normal but this fixed a few problem condensers for me.

_____

All,

I've been playing around with some old analog junque from the 70s-80s recently. One of the things I've been trying to convince to work is an old Sony Betamax player, (for fun and curiosity, not necessity).

Evidently the Achilles heel in these machines at this point in time are the hall effect sensors. They were glued to the drum motors with a glue that wicked moisture and shorted them out. Without the sensor the drum motor won't spin.

I know next to nothing about these sensors. The threads about fixing these say to harvest them from working machines, as they are hard to find. Another alternative is harvesting the drum motor from heads that are shot on other players (the drum motors evidently were the same across several vcr\betas of the time).

I found a seller in Spain on ebay that had two sensors for 20 bucks. Not interested in that price point as I'm not 100% sure it's the only issue, but the ad does give me a picture I can show all you:

http://i.ebayimg.com/images/g/nzgAAOSwTA9X9AZQ/s-l300.jpg

I was just wondering if any of you had any ideas on where to get one, outside of cannibalizing VCRs? I've seen hall effect sensors on Ebay but they are all 3 leaded, the old ones in these devices are 4. Green Brook doesn't have any with 4 leads, and IEI doesn't carry them anymore either.

Just curious if anybody has tinkered with this stuff in the past and might have a stash of them.

Matt

This may be a dumb thought, but the sensor itself, being solid state and potted in the black plastic, will almost certainly not fail. If one of the leads has corroded through or broken off, that is a different story, of course, but quite possibly the only thing wrong is that there is a bit of conductive goop between the leads, effectively shorting them together. Since you have nothing to lose, you might try shooting them with some contact cleaner, which should remove any crud. Even easier, make a paste from a bit of baking soda and a drop of water, and gently scrub the leads with a soft brush like a toothbrush. Gently rinse the leads, then allow them to dry (a hair dryer on LOW might help), and try again.

Folks,

I've been setting up equipment for an IEEE video shoot next week. (Alex Magoun thought they should see 1920's radios in a 1920'ish living room.)

One of the stars is the RTM's Westinghouse RC ca. 1921.

I'd modified this set so it would works well with 201A tubes. (Unfortunately, I couldn't use the original knobs with the new higher-resistance rheostats.) I got to thinking about the little screened window present on many of the early radios. This was intended to allow the operator to observe how brightly he was burning the tubes, but the heavy silver gettering in the '01A's make this almost impossible.

Then I remembered I had one brass-based tipped 201 that I received in the Christmas gift exchange. No guts - no glory! I plugged it in and it works.

The best part was seeing the old fashioned RCA "Radio Corporation" logo on the tube in use.

A short video here.

Do enjoy,
Al

Hi Bill,

Do you happen to have a photo of the under chassis of your Philco 60 in its original state? The one thing I didn't do was to take a before photo of the one I worked on. Actually, someone did a hack job on it and it wouldn't have been accurate.

Thanks.
Joe

Chuck Schwark's Philco Repair Bench site has been changed and the reference information is not longer available. If someone comes up with an alternate, please let me know. Of course there is the Philco Phorum and Ron Ramirez, but Chuck's site was also a good asset.

Regards,
Joe Devonshire

Take a look at the change: http://www.philcorepairbench.com/bblokcap.htm

Alan,
I've got two dim but usable ones-$30 each. One bright one but with a splotchy looking display-$70. I really hate to part with the NOS ones because they're so difficult to find but if you really want one and, I'm sorry for this figure, $175.

Price includes shipping, offers considered

“Radio Manufacturers of the 1920’s” Volume I, II and III, VG condition $40

“Machine Age to Jet Age” Vol I and II Good cond., except last 1/3 of Vol 2 has some wrinkling on bottom from dampness. No pages stuck together $20.

1466. Radio Collection available for sale in Waldoboro, ME

Yahoo group: NEARC_Radio
Date: 2017-08-10 11:25:34 UTC
From: TrainBee
Topic: 1466 Message: 1466
Attachments: 1 described; binary payloads are missing from this source WARC

Recently, I was approached by a gentleman who is interested in selling some or most of his radio collection. He may want to keep some, but I do believe he will sell most.

Attached is a list of the radios I saw, catalogued, and I photographed most of them. He doesn't want to be overwhelmed with phone calls, etc... so, if you are interested in any of them, please let me know and I'll pass on his contact information. Most of the photos are front views. I had limited access to some with no possibility of taking a photo.

I haven't yet had an opportunity to go through the tubes. As you will see, there are a lot.

Regards,
Joe Devonshire

Do you know the model of the Sherwood FM receiver? I'd be interested in
that one. Did not see any photos, just a listing.

From: binkus102@...
Topic: 1468 Message: 1468

For those who listen to AM 740 for music with those vintage sets be advised that 101.3 FM now has a simulcast of the AM programming. Unfortunately the signal is being compromised by a Pirate station in the Roxbury section of Boston.btw AM 830 from Worcester is also playing muic in the evenings.

You can complain on the FCC website if you experience interference getting JIB on the FM side.

Happy listening.

AM 830 booms in up here in Mid-Coast Maine. I'm between Augusta and Rockland / Camden. It's actually better than CFZM in Toronto on 740, but pretty close. Actually, based on the CFZM signal pattern, I shouldn't be able to hear it as well as I do. So much for signal patterns. Another hot station is in Quebec, CJLV 1570. You have to null your antenna to get it as 1560 drowns it out at times. They mix French songs with English songs. Interesting to listen to.

Regards,
Joe Devonshire

Subject: [NEARC_Radio] WJIB adds FM signal

For those who listen to AM 740 for music with those vintage sets be advised that 101.3 FM now has a simulcast of the AM programming. Unfortunately the signal is being compromised by a Pirate station in the Roxbury section of Boston.btw AM 830 from Worcester is also playing muic in the evenings.

You can complain on the FCC website if you experience interference getting JIB on the FM side.

Happy listening.

From: TrainBee
Topic: 1473 Message: 1474

Paul,

730 is OK during the day, but dead at night. There's a local station on 1280? during the day that's broadcasting out of Gardiner. Good signal during the day, but dead at night. I'm in a very quite area and able to hear much more than I ever could in NJ. For the most part, the lower end of the BC band is dead during the day and with few exceptions, just a few readable stations during the day on the upper end. At night, it's radically different. This is when I try to road test, so to speak, my radios.
Except for a noisy transformer out on the pole, 250' away, most of what I hear is clear.

Tonight I have 1100 WTAM out of Cleveland on for the Indians game. Clear as a bell. They just shut out the Tampa Bay Rays. 5-0.

The NJARC runs a DX contest each January. NE is obviously much larger than NJ, but it would be interesting to see what we can hear from time to time from our diverse locations. The beacon stations in Cuba are able to be heard from time to time. As I recall, they ID with CW. I recall some time ago hearing a station from NOLA on 740 at the same time I was hearing CFZM 740.

Regards,
Joe

I should clarify, the 740 I am referring to is WJIB AM 740 Cambridge Boston, Joe can you get WJTO AM 730? It is out of Bath ME and is same as WJIB most times.

Paul

AM 830 booms in up here in Mid-Coast Maine. I'm between Augusta and Rockland / Camden. It's actually better than CFZM in Toronto on 740, but pretty close. Actually, based on the CFZM signal pattern, I shouldn't be able to hear it as well as I do. So much for signal patterns. Another hot station is in Quebec, CJLV 1570. You have to null your antenna to get it as 1560 drowns it out at times. They mix French songs with English songs. Interesting to listen to.

Regards,
Joe Devonshire

Subject: [NEARC_Radio] WJIB adds FM signal

For those who listen to AM 740 for music with those vintage sets be advised that 101.3 FM now has a simulcast of the AM programming. Unfortunately the signal is being compromised by a Pirate station in the Roxbury section of Boston.btw AM 830 from Worcester is also playing muic in the evenings.

You can complain on the FCC website if you experience interference getting JIB on the FM side.

Happy listening.

Paul Buresh

I should clarify, the 740 I am referring to is WJIB AM 740 Cambridge Boston, Joe can you get WJTO AM 730? It is out of Bath ME and is same as WJIB most times.

Paul

AM 830 booms in up here in Mid-Coast Maine. I'm between Augusta and Rockland / Camden. It's actually better than CFZM in Toronto on 740, but pretty close. Actually, based on the CFZM signal pattern, I shouldn't be able to hear it as well as I do. So much for signal patterns. Another hot station is in Quebec, CJLV 1570. You have to null your antenna to get it as 1560 drowns it out at times. They mix French songs with English songs. Interesting to listen to.

Regards,
Joe Devonshire

Paul,

I'm curious as to where you are located. I grew up in Plymouth, MA and now live just outside Hartford. Your comment that parts of the AM broadcast band is mostly dead during the daytime surprises me as I always find the dial full of signals from several states, just using portable radios with their internal antennas.

Do you mean you literally can't hear any signals on parts of the band at all or are you just saying you don't find much worth listening to? It's hard to believe that parts of the AM band would be dead anywhere in New England except in a bad RF area.

Help! I bought a bunch of these replacement locator pins for Octal Power Tubes a while back, and now can't find where to get them anywhere. They are used on Radio and Amplifier Rectifier and Output tubes that pass a lot of power and heat, and crack the locator pin off.
1) What do you call these?
2) Where can I buy them?
Picts attached.
Thanks for the help,
Bruce

Not surprising; I frequent Dyno Records in Newburyport, and the owners tell me vinyl is now 90% of their business. They're constantly adding stock (used and new) and are always busy. Sales of turntables are up and more models are available today. Maybe the art of listening will actually experience a revival!

Guys, I have this Emerson 513/6 I got at the last flea.

See the attached picture of the schematic and look at V2, the second 6SS7, how pin 1 is to chassis ("earth" ground) and pins 3 and 5 are to B- (what is usually "floating" ground). But in the photo of under the chassis we can see pins 1, 3, and 5 all soldered to the chassis. Yet looking at the bottom of the schematic we see C25 and R14 bridging between chassis and B- which doesn't make sense if chassis and ground are the same.

Did some wiseguy try to "fix" the radio incorrectly, or is there some factory trick to how this All American Five works?

Other than posting here you can also email me at davekruh@comcast.net with your ideas.

Thanks

David

I agree. But it does mean that the chassis is potentially hot (electrically) depending on which way the plug is inserted. Make sure you use an isolation transformer when working on it.

I agree that it looks original to the chassis. I'm assuming the cathode of the 12SQ7 is grounded as well. I find that quite often the wiring of a set deviates from the published schematic. You may want to use a "polarized" plug

Attached are pictures of a Hitachi KH-5000 Portable Shortwave Receiver.
I bought it about 15 years ago in Worchester, MA from a guy who's father ran a Radio dealership and Repair shop.
I believe it was Lincoln Electronics.
He said his father was a Hitachi Dealer, and when his father bought it, he paid $750 for the set.
He said it couldn't compete against the Sony and other SW Receivers, so it was discontinued quickly.
It is HUGE, as you can see beside a Zenith 7000.
I'd appreciate any insights anyone can give me.
Thanks,
Bruce

I had the pleasure to meet 90 year old NEARC Member Kenneth Lincoln and his son Gary at Kenneth’s storage unit in North Attleboro, MA.

I hope I’m doing as well at 75 as he is at 90!!

I bought all the tubes he had, but he also has about 30 consoles, another 50 table radios, parts, records, etc.

See the pictures attached. He is not looking for a lot of money for this stuff, and would be interested in your offers on any of it.

Kenneth can be reached at 508 243 8814. If you call him, and get his answering machine, state” I am an NEARC Member.............., and Bruce said to call you about your radios’'.

Leave your number, and he will get back to you.

If I had it to do again, I’d have purchased the chrome Scott chassis and power supply in the 1st picture, but I think most of you know I am slowing down on buying other peoples radios (OPR).

First come, first served.

Bruce Phillips

Bruce, this is a tough one, but I would guess that it was made by Automatic in Boston. The cabinet may not be original and the chassis could have been from a radio - phonograph combination. I've seen another radio by Automatic with the word "Superheterodyne " in the middle like yours. A few questions might help:
1. Does the center knob switch from radio to phono or is it used to change bands?
2. What is the tube lineup?
3. Is there a ballast tube?

Neat looking though.
Howard

Howard, et al,
This is a strange one:
It has a “Left hand Dial” meaning that on the AM Dial, 1600 is on the left and 550 is on the right.
It is AM/SW with a short wave band with 22 MHz on the left and 6 MHz on right. Center knob switches AM and SW.
Five tubes and a Ballast tube: 12SK7, 12SA7, 12SQ7, 50L6, 35Z5, and a 270R4 ballast tube.
This really makes no sense to me with the five tubes drop equal to 121, I don’t understand what the ballast tube is doing.
Last but not least is the RCA Jack on the back on a 1”diameter plate that says FREQUENCY MODULATION PHONOGRAPH TELEVISION on top, and PLUG IN ADAPTOR HERE on bottom.

Bruce

Could be an Automatic 120, 125, or 130 as shown in Riders volume 12. The ballast appears to be used as a B supply dropping resistor. Two other models show a similar chassis layout.

Bruce,My 1947 Westinghouse side by side radio/phono console has a jack on back like you describe. It's an audio input for either an FM tuner or TV (I guess for better big sound), and since it's already a phono, perhaps for a 45 rpm unit. As you probably already know, they called the FM units "translator" instead of "tuner" back then. I put one of those old 42-50 MC FM translator units on the free table at spring Brookline and it was gone in 5 minutes. A GE unit in wood cabinet that listed for about $250 in 1942. Called a "translator", it had NINE tubes and triple conversion! I've read in online discussion groups that some folks use an old TV tuner to modify the old 42-50MC units to 88-108MC.Since AM is "left hand", it makes sense that SW would be also, since undoubtedly it's the same cheese cutter ganged tuning cap for both bands.Re ID of your set, sounds like Howie and others are the experts, not me.
Craig

From: WB2HTO@...
Topic: 1490 Message: 1504

Measuring plate voltage I saw +166VDC on the 50L6 (too high) and -1VDC on the 12SQ7 and others (too low.) At the suggestion of Ross H I strapped a 500ohm 1W resistor between pin 4 of the 50L6 and pin 8 of the 35Z5 to replace an open "hum bucker" part of the speaker transformer. As Ross explained it in an email "The B+ current in a radio is 75% used by the audio amplifier, the last remaining power feeds the rest of the radio. So, the engineers decided to add some out of phase hum to the audio transformer to reduce hum in the speaker, a technique used by Grundig."

It worked! Just for grins measured the plates again and 50L6 was 120VDC, and the rest of the tubes similarly in range as indicated in the schematic. No distortion of the audio, so the primary is fine, although the level seems a bit low.

We still don't know - and may never know - the true model number of this Emerson, which has the tone control of a 513 but only a single band of the 516. I like the theory that before the war Emerson had stock of chassis and was preparing to build 513s but after Pearl Harbor built them without SW. When manufacturing ramped back up after the war they stuck these modified 513s inside the new plascon cabinets and stuck the 513 sticker inside the cabinet. Somewhere in a desk drawer I wonder if there's a hand-drawn schematic by an Emerson tech that never got printed.

So I learned that the B- and Chassis of some AA5 are NOT separate. With both 513/534 and 516 schematics showing distinct chassis and B- paths (but connected in the chassis) as well as a 220k ohm resistor and .02 cap shown in the schematic between the Chassis and B- I spent a lot of time on this. Again, the schematic doesn't seem true to this radio. I knew what a hum bucket was in guitar pickups, now I know how they are used in some old radios.

So now I'd like to find a transformer with the proper winding for the 50L6. Anybody have a suggestion? If it doesn't have the hum bucker I can always use the 500ohm resistor

I was looking up data for Silvertone 1904 mini tombstone in great condition I picked up yesterday. I paid $22 for it, and ironically the new price in 1935 was $21.25! Hopefully most of us want to restore and use these old gems as built, but here's a Youtube where fellow replaced guts with Echo Dot, and it happens to be a Silvertone 1904: https://www.youtube.com/watch?v=mj7PsZONuzQ https://www.youtube.com/watch?v=mj7PsZONuzQ

Chad Hauris in Midland, TX has posted a nice article with some pictures and comments for this Silvertone : speaker field coil is used differently, and the volume control is accomplished by varying the spacing on 2nd IF coils! http://www.retroaudiolab.com/st1904.htm http://www.retroaudiolab.com/st1904.htm

Many of you may already be doing this, but thought I'll it pass along to those who haven't tried it.
Was cleaning up all the miscellaneous tubes of questionable quality surrounding my trusty old tube checker. I suspect you get that same clutter every so often. The identification on many of the tubes had been worn off. I tried the old "put in freezer and breath on them" method and it worked -- for some.
Then someone mentioned to try aiming an LED flashlight across the tube glass at different angles. Wow. Never did that before, but it sure helped bring out the markings on several tubes. If you haven't tried it, give it a shot next time you find a tube with no markings.

A funny -- I played the video, forgetting that *I* have an echo dot thing over in the corner, which immediately tried to play the requested tune which, shamefully, was not in my amazon library. Which actually contains nothing. But she kept trying until I screamed "Alexa Shutup".

I'd have to say this is the most useful thing I've seen done with the echo....

I love these old radios we collect and restore, but Bruce's Wurlitzer 1100 inspired me to want a juke box. Got the "bug" one Saturday aternoon, went looking on Craig's List, and by midnight I was back home with a 1939 Seeburg from RI. Then a month later a 1946 Seeburg "trashcan" from eastern CT. Seems I got the bug at right time, because those seem to be the only 78 machines in all of NE for over a year. The later 45 machines are abundant, but their plastic and chrome doesn't do anything for me--prefer the light up "woodies" of 30's and 40's and I have several thousand 78's for fodder. The Seeburgs sound great and were very reliable, but you can't see the works without lifting lid. What really captured my fancy right from the getgo was Wurlitzers with their picture window into the action. Finally found one cheap, and drove over and got it from other side of Rochester, NY beginning of June. Solid cabinet, but atrocious looking: someone had "modernized" it with a yellow paint job and leather trim. Most of the 30's Wurlys were just beautiful cabinets with no light-up plastics, but a few special models had that added, and this 616a from 1937 was one. Re-wired all the cabinet lighting, stripped finish then stained and put on about ten coats of clear lacquer. Re-capped the amp, which puts out great sound with the quad 45's. Tube lineup: 30,30,45,45,45,45,5Z3. Howie suggested I share this with you folks, so attached are some "before" and "after" pics and link toYoutube video my son shot yesterday with his Iphone.

Thanks John.I was thinking of my son's camera angles and not keeping my thoughts focused as well as planned. Sort of muddled through the coin mech explanation.What I meant to say is Seeburg has coins drop some distance down a chute where they bump contacts to index the play magazine, whereas with Wulitzer, when you push the coin slide home it rotates a ratchet wheel very rapidly. The pulses are much quicker and puts more demand on the magazine relay.And I should have hesitated a little longer to point to the seven tube lineup on the amp. All four pin tubes with direct heated cathodes, but they get the job done nicely! Lineup: 30,30,45,45,45,45,5Z3.My '39 Seeburg has push pull 2A3's and my '46 Seeburg has quad 6L6's.

From: craig.hardy@...
Topic: 1514 Message: 1514

OK folks, since there seems to be some interest in jukebox restoration, here is the video son shot of me demonstrating Bruce's machine.

He's had it over 20 yrs, cabinet restored and amp repaired, but mechanism non working. Some jerk had hacked a hole in cabinet, possibly to reach in and cheat the coin switch. I did the veneer repair on that for Bruce, then he brought it to my house for the winter and I got it all working again. In the video I say "1928", but an expert tells me it's 1930. That said, here's the video:

Topic: 1515 Message: 1515

Continuing on with my jukebox "show and tell", here's the video of my 1946 Seeburg model 146 ("trashcan"). The Vimeo is a little quirky---sound and picture don't stay in sync. Just click on the "thermometer" progress line here and there and it gets in sync again.... https://vimeo.com/220824852 https://vimeo.com/220824852

We made one for my 1939 Seeburg also---first a Youtube which got taken down in hours for "copyright" reasons, then son put it in Vimeo and it stayed OK. Right now I can't open it to send, but I'll consult my son and we'll try to get that straightened out. I handle the old electronics and leave all this new stuff to him!

1516. Bruce's Detrola 219

This is Bruce's Detrola Super Pee Wee model 219.
From prior posts and suggestions, I guess nobody knows for sure what was supposed to be over speaker. All the pics I could find for this mdel are in plastic or totally different wood case. As I believe Howie suggested, this may be a custom built case. Nice craftsmanship. Just had to re-glue couple joints and wax it. Three little disturbed spots in finish top and bottom center of speaker area suggested some sort of vertical bars. Made 'em out of hardwood. I didn't have confidence in matching cabinet finish exactly. Could have gone black or dark walnut or mahogany. Didn't have any 1/4 x 1/2 inch brass bar stock, so decided to cheat and use gold spray.

Couple photos attached.....

John,Another good show is the Capehart flip over changer in their fancy consoles. I've had a 411 for nearly a year. Other projects requiring warm weather for refinishing have taken precedent, but now I'll get on it soon. No refinishing work--still in showroom condition inside and out. 26 tubes: separate bass and treble amps are 7 tubes each with quad 6V6 outputs, and tuner is 12 tubes counting the eye. Changer takes mixed 10 and 12 inch discs and several modes: second side immediately after first side, or later next time through, etc. Crystal pickup was very weak, so Howie gave me an identical dead one which I had rebuilt in Germany! Friend in Baltimore put me onto Herbert Schmidt in Ansbach who grows a new rochele salt crystal, cuts it and silver plates it, then mounts in cartridge--all for about 60 bucks, then total comes to about 90 with postage and duties. Anyone can grow a batch of rochele salt in the kitchen, but cutting out a piece on right axis, etc. ....well for that price it's easier to let Herbert do it!
In case you haven't seen them, here's a video of one like mine:Adorable by the Colts played on a 1941 Capehart

It depends upon the radio and what voltage it runs on. Many European radios have transformers with voltage taps or switches that can be set to various countries voltages.110,120,220 or 240 volts.If your radio has that feature you may only require an adapter for the plug.Other wise you may require an adapter and a step up transformer. You need to investigate further,

Henry

From my very limited experience with foreign stuff, I agree with Henry's good advice.
However I'll jump in with my two cents worth:If you can get the schematic and study the transformer primary winding(s) there might be a way to change it to take 120V on the line cord. Reminds me a funny little deal I pulled about 40yrs ago: wife and I made acquaintance of a young couple from I believe Holland living in the married housing on UNH campus. They had a hair dryer, flat iron and phonograph that needed 240. I got the right kind of receptacle and installed it inconspicuously down on front skirt of the apartment's clothes dryer, wired to the 240. That took care of the hair dryer and flat iron, but phono was 50 Hz, so I held a file on motor shaft and reduced diameters til speed was correct using a strobe disc. Of course I told them the modification couldn't be reversed if they went back to Europe. THEN, not long after that they had opportunity to move to a nicer apartment there in campus housing. So...in the dark of night he and I swapped clothes dryers between the apartments, with a blanket over them so any curious eyes would think we were just moving some furniture....

Subject: Re: [NEARC_Radio] French radio

It depends upon the radio and what voltage it runs on. Many European radios have transformers with voltage taps or switches that can be set to various countries voltages.110,120,220 or 240 volts.If your radio has that feature you may only require an adapter for the plug.Other wise you may require an adapter and a step up transformer. You need to investigate further, Henry

I will add my 2 cents.. In many of my foreign radios I use a step-up transformer (usually a wall wart style).

What I wanted to remind you about these is that when you are not using the radio, you should unplug the transformer, since it will continue to run even with the radio off. I found that it is easy to forget this. I find I sleep better knowing that it is not plugged in! :)

Enjoy your first foreign radio.. This is an area of collecting I have really enjoyed! The designs of many of these are extremely unique!

If you are interested, you can see some of them on my web site:

The AM-SSB-FM CX will run from 1300 UTC October 1 to 0800 UTC October 2,

2017

(9 AM Eastern Time on Sunday to 3 AM Eastern Time Monday)

AND

from 1300 UTC October 3 to 0800 UTC October 4, 2017

(9 AM Eastern Time on Tuesday to 3 AM Eastern Time Wednesday)

Call: "CQ Classic Exchange"

Suggested Frequencies -- plus/minus QRM

Listen up and down 5 to 10 Kc for crystal controlled stations

AM 1.890 mc. 3.860 mc. 7.270 mc. 14.280 mc. 21.400 mc. 29.000 mc.

50.300 MC. 144.300 mc.

SSB 1.920 mc. 3.840 mc. 7.250 mc. 14.260 mc. 21.380 mc. 28.600 mc.

50.125 mc. 144.200 mc.

The CX is a no-pressure contest celebrating the older commercial and

homebrew equipment that was the pride and joy of ham shacks many decades

ago. The object is

to encourage restoration, operation and enjoyment of this older Classic

equipment.

However, you need not operate a Classic rig to participate in the CX.

YOU MAY USE ANY RIG in the contest although new gear is a distinct

scoring disadvantage.

You can still work the "great ones" with modern equipment.

There are new Bonus Scores for using the same model rigs as your Novice

station and for using an RME receiver and for using a WRL transmitter.

Awards will be given in two classes: 1. Three or fewer

receiver-transmitter pairs 2. Four or more receiver-transmitter pairs.

Send logs, comments, anecdotes, pictures, etc. to

J.D. "Mac" Mac Aulay, WQ8U at wq8u@...

Full details at: http://classicexchange.org/sep17/sep17ann.html

Questions? email me!

CU on the air for CX!

The New England Wireless and Steam Museum will be open this Saturday 9/30/17 for the annual Yankee Steam-up.

See 2 buildings with 1920's antique radios, early wireless equipment and scientific apparatus on display. See Spark transmitters in operation plus the Ham station. Also see antique steam engines in operation.

If you have attended this annual event in the past, then you know how great it is. Food available. Free parking.
1300 Frenchtown Rd, E. Greenwich, RI 02818
9:00 AM to 4:00 PM. Hope to see you there!

I do quite a bit of this kind of thing – probably half of the business is vintage/antique.

People are tending to simply throw their modern gear away rather than attempt repair.

The cost of replacements are down, they are looking for the newest fancy features, and there is that general mindset in the world.

1532. TRUE inventor of radio

Yahoo group: NEARC_Radio
Date: 2017-10-03 06:11:58 UTC
From: craig.hardy@...
Topic: 1532 Message: 1532

I read the story of Mahlon Loomis and his kites, communicating 18 miles with witnesses in the Maryland/Virginia area near where I grew up in TV Guide, of all places, maybe 30yrs ago. I've never forgotten the details of the event. It was some years before the first published treatise on electromagnetic radiation, wavelengths, etc., but Loomis had the gut feeling that his kite wires should be the same length.
He had US Congressional approval, but his financial backers were in Chicago and wiped out in the great fire.

Year and a half ago when I was restoring Westinghouse WR-342 Howie gave me I read up on George Westinghouse. His first big success was the railroad air brakes, but then my research led on into his relationship with Tesla and the AC/DC battles with Edison, etc.

While back I also read the bio of Marconi. Diligent, smart fellow, good businessman, but just not the first. Noticed couple years ago Marconi's grand daughter visited the NJ radio club, they visited the site of one of his transmitting stations, and her mission is speaking around the world to garner donations and support for the technical school now established in the old Marconi estate buildings in Italy--scholarships for young people to continue the electronics traditions.

USA finally gave official credit for radio to Tesla in I think 1944, couple years after his death.

Unless you can remember Loomis name, it's sometimes hard to find his story with a web search. But was thinking of it again this evening and thought maybe I ought to put some links out here for members:

Craig, et al,

I’ve learned as I get older that History was written by the Winners and Money makers. It should be renamed Winstory.
Surely there were plenty of light bulbs before Edison, and radio signals before Marconi, and telephones before Bell..
But they made thinks practice for the average person AND had politics and $$$ to back them.
My general belief is that Edison invented nothing, but was a man who could understand when those around him did, and the value of what they did.
Like Tesla and Edison’s hundreds of other Engineers and Inventors.
I’ll take Tesla’s accomplishments any day over Edison’s. We still don’t understand everything he did.
The pain Edison put Tesla through in an attempt to prove Tesla’s AC theories wrong is just remarkable.
The winners are in children's history books, and the rest are lost in the breeze.
Don’t even get me started about Columbus on his Weekend! The dude never stepped foot in America, and on the 2nd trip of the N, P, & SM his crew slaughtered 1000s of natives in the islands below Florida.
I’ll go with Mr. Erickson any day of the week.
True is a relative term,
Bruce

I was saddened when I got to Kutztown this year and saw another name on the table beside mine.
For the past 7 years I've had the pleasure of having the table beside Jane and Buford Chidester.
They have always been "straight up Radio People". More interested in helping others than chasing the big coin.
I've known for a while that Jane was not doing great, but she was a true champion- a real fighter.
I am certain Buford will miss her greatly, but I also know Buford knows she is in a far better place now, and at some day ahead he will join her there.
God Bless them both,
Bruce Phillips
President New England Antique Radio Club

Yes, that's right,

There's an awesome evening on Al Klase's favorite military radio (you can correct me on that, Al) at The College of New Jersey at the same time that the club meets at InfoAge: https://www.meetup.com/IEEE-Princeton-Central-Jersey-Section/events/243814808/. I and others have urged the organizers to record if not stream the event, and we can hope that they'll catch up to what Dave Sica has been spearheading at NJARC for over ten years. Otherwise, pass the word to friends in eastern Pennsylvania for whom Wall Township is just a drive too far,

Alex

Hi Joe -
I think Bill means Ross Hochstrasser. As this is a modern version of the original 960 that is made in China, I'm not sure how successful you will be in locating schematics. I suppose that's the challenge of modern electronics; we live in a disposable society so the unit goes unrepaired when it breaks and is then sent to a landfill as the final destination.
If you are successful, please do share!

Topic: 1549 Message: 1549

Good evening, All -

A gentlemen contacted us on our Facebook site who has a large amount of vintage photofacts that he'd be willing to donate to the club. He has about 6-7 boxes, all in their numbered folders - about 200 lbs total, enough to fill a 4 drawer file cabinet.

The gentleman's name is Ron Burnham. He is located in Brookfield Mass, about 10 minutes from exit 9 of the Mass Pike. His contact number is 508 344 4082.

Any takers?

Regards,
John

Hi All -

Yet another person has contacted us with an unusual Abbotwares horse radio. He's wondering whether this is a prototype version as it's different from others he's seen in the past. Apparently his research finds that some guy made this, and he traveled from LA with the idea to NY to insert the components. It's an LA company prototype hollow cast (some kind of sawdust like wood inside via a hole in the back under the saddle to have a full view inside) with a stained, roughly hand milled wood base.

I know little about these, but perhaps someone in the group can offer more insight. I suggested he attend the Fall event, as he could enter this in the novelty radio contest.

Regards,
John

Topic: 1555 Message: 1555

FOLKS,
A lifelong friend of mine sent me this. He's a lawyer who deals in international commerce, not a radio nut like us, but though I might be interested. On my computer it goes through some loading steps but process does not complete---says I need a web/GL supporting browser. Apparently it's some tool for locating and/or tuning in any radio station in the world. I do this for USA radio stations with Amazon ECHO: just say "Alexa, tune in WWL" or "Alexa, tune in zoomer radio". Haven't tried for any overseas stations, but maybe works there too.

Anyone want to try this "radio garden" thing, here it is:

Craig,

I was able to open it in FireFox. Google Chrome requires a web browser utilizing Web GL. Even with trying to open it in FireFox, it was still slow. I couldn't find any stations to listen to, and all I could get after a 5 minute wait was a jingle from WABC in the early 60's. Each link you try to open takes a long time to open.

Has anyone else tried this???

Topic: 1555 Message: 1558

Yeah, I'd tried Firefox too, but guess I didn't wait long enough.
I know it's cheating to use Amazon ECHO instead of waiting til after sunset and tuning stuff in the old way, but neat anyway. Zoomer radio (Toronto AM 740) doesn't play our kind of oldies until late evening, so tuning in with ECHO in daytime only serves as a demo of modern tech....

Subject: [NEARC_Radio] Grundig Classis Model 960 schematic

I have a Grundig Classic Model 960 with no output. I can't find a schematic on-line and Grundig, now Et on in the US is of no help. It was mfg. in the late 90's. Does anyone know where I might come across a schematic?

Regards,
Joe Devonshire

Hi Howard,

If you're still willing to part with a new one, can you bring to the show? I've got a customer coming who is looking for one. Bring one of the dim one's too. He may want to go that route.

Hi Niel,

That looks very good. I'm sure you know to keep it out of any sunlight. Sunlight can fade the dials. Every Hallicrafters from that time had brown faded dials. From what I've read, it is the nature of the material used. If you want to get some luster on that case, use some Armor All. Put it on a cotton cloth and wipe it on. Let it dry and wipe it again. Then just dust as needed.

Regards,
Joe

1576. Selling my Zenith 9S262

Yahoo group: NEARC_Radio
Date: 2017-10-30 18:12:55 UTC
From: membership@...
Topic: 1576 Message: 1576
Attachments: 5 described; binary payloads are missing from this source WARC

I have decided to sell my Zenith 9S262 Shutterdial console.

I have replaced all of the capacitors/line cord/dial belts and it plays well. I have also added a one amp fuse to protect the power transformer. The working eye tube is bright but is a 6E5 replacement. I have dissassembled/cleaned/oiled the motorized tuning motor and it works well.

The cabinet is only "fair" and there will need to be some veneer work done to the top. Please see the pictures for details. It also has all of the correct wooden knobs.

Price is $295/best "reasonable" offer and pickup is in Nashua, NH. Please respond in this topic if you are interested. First come, first served!

-Tom Scarpelli

Subject: [NEARC_Radio] Selling my Zenith 9S262 [5 Attachments]

I have decided to sell my Zenith 9S262 Shutterdial console.

I have replaced all of the capacitors/line cord/dial belts and it plays well. I have also added a one amp fuse to protect the power transformer. The working eye tube is bright but is a 6E5 replacement. I have dissassembled/cleaned/oiled the motorized tuning motor and it works well.

The cabinet is only "fair" and there will need to be some veneer work done to the top. Please see the pictures for details. It also has all of the correct wooden knobs.

Price is $295/best "reasonable" offer and pickup is in Nashua, NH. Please respond in this topic if you are interested. First come, first served!

Bruce, are you still looking for this? I have one, but it’s from a recording console, so it’s slightly different, but can be modified for call letter tabs. Let me know,
Howard

Good afternoon, All -

I received a message on our Facebook page from a woman wanting to give two consoles to someone who can give them a good home. Her message follows:

Have two floor radios from 1930s which I would love to give to someone. They are Emerson majestic and GE model78. At one point restored by my father. But have been in storage now for years. Can be reached at margaretalexander@mac.com.

She is located in Newton Upper Falls, MA. These look to be in nice condition. Two photos attached.

Regards,
John

Just remember
Reply = Poster
Reply All = Everyone

This digitized kinescope was tweeted as the only surviving episode of NBC's Eyewitness program from 1947. I started watching just to see what TV production looked like in a year when RCA sold something under 200,000 TV sets. Imagine my surprise when the show's feature is a series of recreations and re-enactments of landmarks in TV development starting in 1873 and working forward from there. Needless to say, John Logie Baird and Philo Farnsworth need not apply, but in any case you should appreciate some of the props and the expensively dressed sets. It appears that NBC kept quite a few bits and pieces in broom closets and dimly lit studio corners:

Hi Richard,

Your photos didn't work on my end. Which model of the 610 series is it? Phono / Console, Console, Tombstone? All have the same chassis and tube complement. I haven't seen a Radio / Phono, but from the picture, the lid should lift up. This is probably the rare version. Tombstones are fairly common.

The technical info is in Riders Vol 6. This radio has the Philco bakelite capacitor blocks. Our own Ray Bintliff wrote the book on restoration of these. I reserve comment on value.

Regards,
Joe Devonshire

Richard,

Being inherently frugal (cheap), I'd offer at least $50. If the rest of the radio looks as good as the front, I'd bend a little. Are all of the glue joints and veneer all tight? Is there rust on the chassis? Are the tube shields all there? Did Mickey set up house in there? How does it smell? Did you find the family jewels buried in there? It does happen.

Just some more to think about. If you do get it, with a some patience restoring it, you will have a nice radio.
Regards,
Joe

BTW... it looks like a story is brewing here. How about you keep track of what you do and write an article for us. You've started it here with your e-mail and photos.

Joe, I have an empty can here of Deoxit D5 I got at Radio Shack few years ago. Ridiculous price of $15 for little 5 oz spray can. Worked fine, I guess, for whatever I got it for, but it quit spraying before the can was empty. The Amazon listing you show looks similarly over priced for what it is.
My father in law, who had radio/TV sales/service shop from 1930-1970 in NYC and CT, raved about Blue Stuff contact cleaner and I remember using it myself. It was good stuff, but no longer available. Don't recall the "abrasive" qualities of it mentioned in this forum discussion, but remember using it a lot and liking it:

Hi Craig,

I'm not a fan of using unnecessary chemistry to clean. I use Deoxit D5 to clean contacts. To keep it from flowing all over the chassis, I use a Q-tip. Sometimes the downside of this are the fibers left behind. Then I have to take the time to pick them out. For tubes, I take a brass bristle brush to the pins. Rarely do I use any Deoxit on them. This looked like a marketing gimmick, but I thought I'd ask anyway.

Joe

Joe More on contact cleaners. As you know, just about any petrochemical solvent works for cleaning stuff---gasoline, kerosene, mineral spirits. Acetone, except it'll dissolve plastics. Of course good ole trichlorethyene ("tri-chlor") was popular de-greaser and general cleaner until its carcinogenic aspects seem to have killed it's wide spread use. There's always WD-40 and Blaster nowadays.
Physical cleaning tools: I scrounge used/broken tools from my dentist, and would be lost without them in may cleaning situations! The ones with flat sided hook ends are just the cat's pajamas for scraping tube pins and male connector pins. And for the female part of connectors and sockets I use round needle file. And also GREAT are the little Proxy dental brushes. Remember how especially handy the little proxy brush was when I had to deal with dirty contacts on the connectors on a friend's car computer---60 or 80 contacts on that plug.
WD-40 soak, proxy brushing....voilla! Working again.
Well, you've probably been down all these roads too, Joe, but that's my two cents worth.

OH... as Columbo would say, One More Thing: Ever seen those electric manicure kits with the motor driven flex shaft and assortment of tools to go on end? Winter of '66, car wouldn't start. Distributor cap contacts are slightly concave. Mini drum sander cleaned them and engine running again. Used the electric manicure thingy I'd just given wife for Christmas. She didn't mind, because we had wheels again. In our 54yrs of marriage it's become sort of a joke: whenever I've fixed something that wasn't working---car, lawnmower, food mixer, water pump, furnace--you name it--wife has asked me, "What was it, dirty contacts?" And my answer has usually been "Yep!".

And this week the latest was same: my 1947 Caterpillar 20KW diesel generator quit during second day of the recent windstorm outage. Brushes on the rotating field slip rings not quite free enough in their holders, even though I'd polished the sliprings pretty well. Now that it's fixed, we'll probably have no more outages this winter, right?

Hi All -

Another person has reached out to us on Facebook to sell a Zenith tabletop. I'm not sure on the model, but it seems to need work (missing one knob). I believe she is located in Beverly, MA and can be contacted via email: Erose.walmer@gmail.com

Pictures are attached. Also, she is selling an antique black floor safe in case you need a conversation piece with your radio!

Finally she is also interested in selling some vintage records. I've attached a few photos she provided.

Regards,
John

Bruce,That was Chris Thompson. I visited him to deliver that free Grundig console from my friend in Madbury and actually Chris owes me a Seeburg wallbox, which we forgot to pick out and put in my van the evening I was there. So if you happen to be visiting him maybe you could grab that. No immediate plans to hook one up, but it would be neat to put wallbox in kitchen to control the trashcan in dining room.
Chris's card sez mobile: 603 762-2929 direct: 603 283-1965
Only address on his card is his Masiello Group business address in Keene, but his home is in Wincester.

It is confusing because CT has two vintage museums;

The larger is the Vintage radio & Communications Museum in Windsor, CT
vrcmct.org 860-683-2903

The other one is the Vintage Hi-Fi Museum in West Hartford - it is at the shops at 485 New Park at 203-877-2409 Vintagehi-fi.org

Hope that helps you.

1610. BIG restoration project

Yahoo group: NEARC_Radio
Date: 2017-12-14 23:27:57 UTC
From: craig.hardy@...
Topic: 1610 Message: 1610

Folks:
Our efforts restoring radios and jukes PALE before this fellow's restoration projects. Over last year I've gotten to know George Epple down in Baltimore, who's been restoring jukes and Capeharts last 40 years. Today he sent me this link showing one of his neighbor's restoration of a 1912 Welt orchestron. Some of the instruments he restores go for hundreds of thousands of dollars and the work involved makes some of our NEARC projects look like repairing a food mixer or electric can opener by comparison. ENJOY!

Craig,

I would have never imagined such a beautiful instrument was only 8 miles from me in S. Dartmouth.

I knew the caretaker of the property up to the time of his passing a few years ago, never mentioned such an instrument...

It is hard to believe how close to Buzzards Bay the carriage house is... Although it is unknown how long the instrument resided in the loft, consider the passing of several hurricanes including the '38, '44' Donna, Carol, Bob... Sure the first floor of the carriage house was awash with sea water in the '38.

https://en.wikipedia.org/wiki/Round_Hill_(Dartmouth,_Massachusetts)
https://en.wikipedia.org/wiki/Round_Hill_(Dartmouth,_Massachusetts)

Amazing, truly amazing.

I have a couple of artifacts form Col Greens estate, A Western Electric amp & horn and from the MIT facility, a later addition to Round Hill, an RCA 3" scope, the scope's aluminum front panel show the rigors of salt air...

Thanks for posting...

Chas

Nice radio! Regarding the recording feature, I had a Radiola 28 with the record changer and record feature. TO RECORD, special aluminum discs (no longer available) were used. They already had grooves, and a weight was placed on tone arm so that recordings were made by sort of "brute force" method. My unit, lugged home from dump, had extensive moisture damage and sat here for 10-12yrs. After re-establishing contact with Bruce I put it on NEARC for free for about a month before I wound up junking it, just saving knobs, dial escutcheon and lots of veneer that was falling off it. Who knows, maybe some of those aluminum recording discs ARE out there somewhere if Bob wants to try....

Howard et al,

I had an ESSBEE 201-A a few years ago, but never found any info on it.
At the time I was collecting as many different 201-As makers as I could find.
I was well over 100, and over 30 were New England Makers, but my interests changed, and I sold most of them.

Back over 15 years ago at a AWA meet in Rochester, NY I met a man that displayed well over 200 different Makers of 201-A Tubes.
He was looking for any he didn’t have.
I remember Antique Radio Classified ran an article about this man and his collection, and I think it grew to over 300.
I’ve still got a bazillion ARCs in my basement.
I wish there was a full index for ARC, as I unfortunately do not have the time to look through them.

Happy New Year to all,
Bruce

In the August 1930 issue of Radio Magazine, ESSBEE is listed as "ESSBEE Radio Sales, New York" in a list of Supreme Instrument distributors. Interestingly, this is the same issue as the one containing Craig Hardy's pointer to the "Radio Hawkshaw".

Probably one of the Canal St radio shops?

Yes, I saw that listing also but it didn't seem to be tubes. But I guess a lot of radio makers produced their own tubes. i.e. Majestic was producing I think I read 8 or 10 thousand tubes per day! Numbers for that plant are awesome: something like 27 boxcars shipping out per day and using the wood from FOUR lumber yards for their cabinets. Wax and aluminum on the order of 15 tons per day or something like that. Plus wire, etc.Craig

1634. Antique Cameras --- Free

Yahoo group: NEARC_Radio
Date: 2018-01-10 11:49:46 UTC
From: rtalfa@...
Topic: 1634 Message: 1634

Hi folks,
I am in the process of cleaning my attic, and need to get rid of some things, but hate to throw things away. (Hence the problem in the attic)
I have some old cameras, some very old probably from the 40's, and some more recent from the 60's.

I would like to give the lot away to someone that would like to have them.
Here is the list; I can send photos to anyone interested.

1) Brownie Hawkeye with flash
2) Kodak Duraflex II
3) Ansco Box Camera (missing front lens I think)
4) Kodak JR-Six-16 Series III
5) Brownie Starlet

6) Yashica 8mm Movie Camera

While I am at it, if anyone collects fire fighting equipment, I have a Scott Sling Pak SCBA that is up for grabs too.

Thanks,

Russ

  Hi folks,I am in the process of cleaning my attic, and need to get rid of some things, but hate to throw things away. (Hence the problem in the attic)I have some old cameras, some very old probably from the 40's, and some more recent from the 60's.
I would like to give the lot away to someone that would like to have them.Here is the list; I can send photos to anyone interested.
1) Brownie Hawkeye with flash2) Kodak Duraflex II3) Ansco Box Camera (missing front lens I think)4) Kodak JR-Six-16 Series III5) Brownie Starlet6) Yashica 8mm Movie Camera
While I am at it, if anyone collects fire fighting equipment, I have a Scott Sling Pak SCBA that is up for grabs too.
Thanks,
Russ

Hi Craig,

I'm a long time member of NJARC. They've done a lot of things over the years. I miss being able to be at the meetings, but at least I can watch them via video live streaming. There's quite a bit of tech info via Youtube you can check out. It's too bad we're so spread out to have monthly meetings up here.

Glad you found them.

Regards,
Joe

1640. Best Solar Transistor Collection on the Planet- Bar None!

Yahoo group: NEARC_Radio
Date: 2018-01-15 12:03:18 UTC
From: radioorphanage@...
Topic: 1640 Message: 1640

I've never met Bill Burkett personally, but I've known him for over 20 years.
Bill was a very strong collector of transistor radios when Marty Bunis wrote his two transistor radio books.
I think most of you know transistors are where my passion for Antique Radios started, and a lot of the transistors pictured in Marty's book came from my collection.

Anyway, Bill has the best collection of Solar Transistors on the Planet- bar none.
Most of these I have never seen in my life of collecting.
Check out the You Tube below.
Bruce

Hi Bruce -

In November I was the guest speaker after the Southern California Antique Radio Society SCARS annual dinner meeting and did a presentation of the solar radios collection.

A few new items appear in this video and it was much more professionally produced than the earlier one in Phoenix.

In any event, the video has been uploaded on youtube and I thought you might enjoy seeing it. Feel free to pass it along to anyone else you think might like to view it.

Best regards,

Bill

1641. Heathkit collection for sale, downsizing

Yahoo group: NEARC_Radio
Date: 2018-01-17 23:05:53 UTC
From: k1wgn@...
Topic: 1641 Message: 1641
Attachments: 1 described; binary payloads are missing from this source WARC

I have a collection of Heathkits that I must sell due to health. I have posted 24 photos that show many of the units. I will provide additional photos as needed. They are mostly pre-1960 and mostly test equipment with some audio. Most of the amateur equipment has already found new homes. The attached PDF file lists the roughly 200 pieces.

Pricing is somewhat flexible particularly if buying multiple pieces. Buyer is responsible for shipping and a $5.00 handling fee to cover boxes, bubble wrap, etc. I certainly would rather have items picked up at my home near Worcester, MA. The mahogany chair side enclosure, CE-1M must be picked up, it's really too cumbersome to ship.

All items are being sold as, where is. I cannot guarantee any of these items to be functional as with all 50 plus year old electronics. That not withstanding, I will check things as best I can and report conditions honestly.

I call your attention to to a few unusual items:
Item #1 is an AC-1 antenna coupler with a green face and red lettering and border. It's the only one I've ever seen.
Item #37, photo timer, I've never seen another one even in early flyers.
Item #169 has the earlier green panel with NO border. (Running low on red paint?)
Item #194 is a replica of the V-3 battery powered VTVM which never saw production. I made it from a V-1 or V-2 by scanning its panel and relabeling where necessary then printing the result on sticky back paper. The color has turned dark since it was completed. internally it is still a (non-operational) V1 or V2.
Item #208, VG-1 voltage calibrator, again has the earlier green panel with NO border. Item 216, home brew station control includes a repackaged Heathkit HD-15 phone patch, an electronic keyer and a digital clock that croaked after a nearby lightening strike. I could never find a replacement chip, DCC7302N. I had planned for a preselector that was never constructed.

1644. Philco 39-45 Output Transformer

Yahoo group: NEARC_Radio
Date: 2018-01-21 23:55:43 UTC
From: TrainBee
Topic: 1644 Message: 1644
Attachments: 1 described; binary payloads are missing from this source WARC

I'm having a problem with a Philco 39-45 Output Transformer. With no tubes in, using an audio generator or VOM, I can get a test signal through one side, but not the other. This is from the plate of one of the 42's to grid. It won't work on the the other side. The grid is the center tap. I should hear a signal though both sides, correct? When I power it up I get no audio or hum at all.

Am I missing something, or is this transformer not working correctly? The schematic is attached.

Regards,
Joe Devonshire

1645. Re: [NEARC_Radio] Philco 39-45 Output Transformer [1 Attachment]

Yahoo group: NEARC_Radio

From: Alan Finger
Topic: 1644 Message: 1645

Hi Joe,

When you say grid, I assume you mean the screen grid connected to the center tap.

Did you check to see if the non working side of the primary is open? Another possibility is a shorted plate capacitor (59 or 62 on the schematic). That would present a low impedence alternate AC path through the power supply (C71).

Guys,
Many of you may remember an ‘online store’ that had all kinds of parts and stuff for building projects, Ocean State Electronics. It shut down a couple of years ago much to my dismay.
Well here is an update: I just bought some #10 fiber washers on ebay. The received package included the attached letter, from the proprietor, Frank Pellicano, WB1GTK, at “DBA Atlantic Electro”, Westerly, RI. After reading the letter and a little online searching, the address for “DBA Atlantic Electro” yielded the below Google Maps street photo. So if interested, here is a link to his ebay store…
http://stores.ebay.com/Atlantic-Electro?_trksid=p2047675.l2563

I just stumbled onto this video of an old shop--Acme Radio/TV in Lomita, California (Los Angeles area), in business since 1957 and just closed Jan 1, 2018. At the 17 minute point, there's closeup video of a newspaper article, and you can read all of it by pausing as he moves around the page. Both in the interview and in the newspaper article there's mention of his few customers in their 80's who prefer their black and white TV's and won't have a color set in their home--considered "evil". ENJOY!

1651. World Radio Day 2/13/18

Yahoo group: NEARC_Radio
Date: 2018-02-12 23:55:45 UTC
From: TrainBee
Topic: 1651 Message: 1651

Here's a link to the World Radio Day website. http://www.diamundialradio.org/

Joe Devonshire

About World Radio Day
UNESCO’s General Conference, at its 36th session, proclaimed World Radio Day on 13 February.
UNESCO’s Executive Board recommended to the General Conference the proclamation of World Radio Day, on the basis of a feasibility study undertaken by UNESCO, further to a proposal from Spain.
Radio is the mass media reaching the widest audience in the world. It is also recognized as a powerful communication tool and a low cost medium. Radio is specifically suited to reach remote communities and vulnerable people: the illiterate, the disabled, women, youth and the poor, while offering a platform to intervene in the public debate, irrespective of people’s educational level. Furthermore, radio has a strong and specific role in emergency communication and disaster relief.
There is also a changing face to radio services which, in the present times of media convergence, are taking up new technological forms, such as broadband, mobiles and tablets. However, it is said that up to a billion people still do not have access to radio today.
A wide consultation process started in June 2011, carried out by UNESCO. It included all stakeholders, i.e. broadcasting associations; public, state, private, community and international broadcasters; UN agencies; funds and programmes; topic-related NGOs; academia; foundations and bilateral development agencies; as well as UNESCO Permanent Delegations and National Commissions. Among the answers, 91% were in favour of the project. The leader of the project, the Academia Española de la Radio, received over 46 letters of support from diverse stakeholders, including the Arab States Broadcasting Union (ASBU), the Asia-Pacific Broadcasting Union (ABU), the African Union of Broadcasting (AUB), Bangladesh NGOs Network for Radio and Communication (BNNRC), the Caribbean Broadcasting Union (CBU), the European Broadcasting Union (EBU), the International Association of Broadcasting (IAB), the North American Broadcasters Association (NABA), the Organización de Telecomunicaciones Ibeoramericanas (OTI), BBC, URTI, Vatican Radio, etc.
The date of 13 February, the day the United Nations radio was established in 1946, was proposed by the Director-General of UNESCO. The objectives of the Day will be to raise greater awareness among the public and the media of the importance of radio; to encourage decision makers to establish and provide access to information through radio; as well as to enhance networking and international cooperation among broadcasters.
The consulted stakeholders also proposed ideas for the programme of celebration: extensive use of social media, annual themes, a dedicated website enabling virtual participation, special radio programmes, radio programmes exchange, a festival involving key partners, and so forth.
On 14 January 2013, the United Nations General Assembly formally endorsed UNESCO’s proclamation of World Radio Day. During its 67th Session, the UN General Assembly endorsed the resolution adopted during the 36th session of the UNESCO General Conference, proclaiming 13 February, the day United Nations Radio was established in 1946, as World Radio Day.

1660. Help needed - March 10th

Yahoo group: NEARC_Radio
Date: 2018-03-04 01:46:22 UTC
From: Ian Gordon
Topic: 1660 Message: 1660

Folks:

I have been very fortunate to have just acquired a very rare radio / record player console from RCA. The unit is located in New Hampshire north of Nashua. I need help to load the unit into my car from the seller's house. The job should take less than 5 - 10 minutes. I was hoping to do this on Saturday March 10th. That's tentative. I need three people as my back prevents my participation. You would be saving me a great deal of money and I shall compensate any member willing to help this job at a $30 fee to cover gas and time. If you can do this or know someone trustworthy to assist, please contact me immediately. Salutations to all.

Folks:

I have been very fortunate to have just acquired a very rare radio / record player console from RCA. The unit is located in New Hampshire north of Nashua. I need help to load the unit into my car from the seller's house. The job should take less than 5 - 10 minutes. I was hoping to do this on Saturday March 10th. That's tentative. I need three people as my back prevents my participation. You would be saving me a great deal of money and I shall compensate any member willing to help this job at a $30 fee to cover gas and time. Yes. Friend of mine has half dozen of them. The 100ft 16mm four minute soundies are all threaded up on a carousel rig with 12 or 18 of them. It indexes around to the projection lens head. Plan was to place them in convention centers, hotels, etc. Problem was the soon advent of affordable TV killed the interest.

1666. Philco 49-909

Yahoo group: NEARC_Radio
Date: 2018-03-15 01:29:48 UTC
From: TrainBee
Topic: 1666 Message: 1666

I'm working on a Philco 49-909. I have a mechanical quirk that I can't seem to figure out. I can't get the AM to play unless I squeeze a pencil (it's all I had) in between the RF / IF deck and the chassis right by the antenna terminals. The FM was a bit quirky as well, but that's been more responsive.

My guess is that there's some mechanical issue going on here. Has anyone run into something like this with a Philco before? Am I looking at a short in an insulator, bad chassis strap (they are all tightly soldered), or something else? When it plays it sounds great. BTW... I have the matching MP-15 phonograph to play through it.

Thanks.

1670. Atwater Kent F4 speaker substitute

Yahoo group: NEARC_Radio
Date: 2018-03-26 03:18:07 UTC
From: Dick Joltes
Topic: 1670 Message: 1670

Quick query: I'm finishing up a rebuild of an AK55C and just discovered the speaker is totally bust -- cone perfect, both voice and field coil open. I can get it rebuilt, but would love to test the set first. From what I can tell, the field coil is about 1100 ohms and the voice is around 5 (from a few listings I've seen).

I've gimmicked together a field coil for other rebuilds in the past, and just used a little 8-ohm speaker for testing. Any reason that trick wouldn't work here? I don't want to take a chance on frying all the work I just finished...

BTW, I just scored a Kiel table with what was allegedly another AK55 in it, but the set had been swapped in probably the mid '30s for an RCA, looks to be a 5T series but I haven't pulled it to have a look yet. Got the pair for $20, and the table is nearly pristine, so I'm not complaining much.

cheers,

Dick Joltes

1671. March 2018 CQ Magazine article - Princess Elettra Marconi

Yahoo group: NEARC_Radio
Date: 2018-03-27 18:08:19 UTC
From: TrainBee
Topic: 1671 Message: 1671

CQ magazine received permission to reprint an article originally published in the December 2017 issue of the European Radioamateurs Assoc. in their March 2018 issue. It is an interview with Princess Elettera Marconi, Guglielmo Marconi's daughter. You may recall that she visited this country a few years ago. The article begins on pg. 10. CQ may still be available in the larger box book stores. I don't know if it would be available in the smaller book stores. CQ sometimes grants reprint permission for educational purposes if someone wanted to contact them.

1678. Zenith Transoceanic R-520/URR Questions

Yahoo group: NEARC_Radio
Date: 2018-04-16 23:28:03 UTC
From: radioorphanage@...
Topic: 1678 Message: 1678

I'm looking at a Zenith Transoceanic R-520/URR, which is Zenith's rarest Transoceanic.
I have owned every other Tube or Transistor Zenith Transoceanic except this one.
I'll admit I'm no expert here. Does anyone in the NEARC have one?

Other than the Military tag on the front (that you can buy "repros" of on eBay for $59.95), what else is different on this set?
If you have one, I'd love to see pictures of the back of the radio.

If you'd prefer to answer privately:
president@nearc.net
or
Radioorphanage@comcast.net
Thanks for any help,
Bruce

From: policow6@...
Topic: 1678 Message: 1680

You must read "Transoceanic: The Royalty Of Radios" from Schifferbooks which lists all specific differences.

Here are some of them from memory:

Oil cloth cabinet covering in olive drab
Completely shielded internal coil tower
Standard multi-voltage module (available as an add-on to the civilian unit)
Spare tube holder on back cover
I think the pilot light was neon and always on in the later version

The military service manual is an incredible piece of literature to tell you everything about both the civilian and military 500/600 series...another must-have.

Date: 2018-04-17 21:59:36 UTC
From: radioorphanage@...
Topic: 1681 Message: 1681

WANTED: 100+ Consoles and Larger Wooden Table Radios- Nonworking- Tubes and Chassis not required!

No, it’s not a dream, and you will probably never see a post like this again in your life!

The Ogunquit Playhouse in Ogunquit, Maine will be doing Smokey Joe’s from May 16-June 9th.

It will leave there and go “Off Broadway” in New York City (with the radios)after it closes in Ogunquit.

Abby Stuckey- PropMaster for the Ogunquit Playhouse is looking for 100+ nonworking consoles, larger wooden tabletops, and a few plastics and bakelites to use as the backdrop props for the show.

These should be nonworking sets, chassis, tubes, knobs, etc. are optional. These may end up being gutted, refinished, painted, have lights put inside, etc.

I’m not suggesting you give up good restorable sets, but if you have a lot of “Basket Sets” you realize will never be restored, this is your opportunity of a lifetime!

Abby’s top price on Consoles is $100 each, and preferably less to much less.

Abby’s top price on Table Tops is $50 each, and preferably less to much less.

She, or her crew can come pick them up- pretty much anywhere in New England.

She is not looking to go somewhere to buy A radio, as she does not have time. She prefers large accumulations- let’s say a minimum of ten to a dozen radios and hopefully more or much more at a location.

Time is of the essence!! Contact her this week with some pictures of what you have, and your asking price.

This is first come first served, and she will go where the biggest accumulations are first.

Contact Abby with what you have (preferably with pictures) and your asking price- ASAP.

Abby is stuckey.abigail@gmail.com or you can call her at 914.714.1072.

If you are going to do this, do it as soon as possible,

Bruce Phillips

President NEARC

Jay,
Thank you.

Yes, I use to have the "Transoceanic: The Royalty Of Radios" book.
But as I honed the collection, it was given to the new owner of my Zenith “Bomber”with the radio.

I appreciate the insights, but what I enjoyed more was clicking on your https://radiojayallen.com website! I’d suggest the rest of you guys check out his site!!!!!

I’ve had two Sangean PR-D7s at my remote camp “Up Maine” for years.

They will play all day and night on the rechargeable batteries that only get a couple hours charge from my generator.

Keep up the good work,

Bruce

1699. CHRS Display at San Francisco Int'l

Yahoo group: NEARC_Radio
Date: 2018-04-18 11:59:04 UTC
From: howieducky@...
Topic: 1699 Message: 1699

First, I apologize for the excessive file messages - I cant upload to a photo album for some reason. Anyway, the files uploaded are photos I took from the current exhibit while I was stuck at SFO. The exhibit is well made and is a great example of how an antique radio exhibit should be displayed in public. Sadly, there were very few individuals taking the time to stop and enjoy all the very educational displays even though there were several delayed flights at terminal 3. The pictures were taken on my phone and are not of great quality, but does show the effort and care taken to make the display. Here's the link to the exhibit page: https://www.flysfo.com/museum/exhibitions/radio
https://www.flysfo.com/museum/exhibitions/radio

1701. Power switch for AK55?

Yahoo group: NEARC_Radio
Date: 2018-04-22 03:50:30 UTC
From: Dick Joltes
Topic: 1701 Message: 1701

All,

I'm just finishing up on an AK-55c and discovered the power switch is shot. Any suggestions for an authentic looking replacement?

Set works great following a full rebuild!

Thanks,

Dick Joltes

1702. AK55-C power switch

Yahoo group: NEARC_Radio

From: djoltes@...
Topic: 1702 Message: 1702

Hi all,

I just finished a rebuild of one of these sets, but of course the power switch is packed in. Any suggestions for an accurate looking replacement?

Jumpered around the switch tonight and ran it up via Variac to test all the new work. Sounds amazing; fired right up, speaker is clear as a bell.

Cheers,

Dick Joltes

Hi Dick,

I dug out the 55, and took its switch out. After a little cleaning it reads 0.2 Ohms in the on position, but I did not test it under a load.
It is yours for free if you want it.

Russ

From: bambuter@...
Topic: 1707 Message: 1707

I am repairing some Philco radios and am looking for information on the Philco Bakelite blocks. Ray Bintliff authored "Philco condensers & more" but I cannot find it in stock anywhere.

Does anyone know where I can find information on these Philco blocks.

Thanks bambuter@yahoo.com

There is a gentleman who sells books at our swapmeets. Sorry I don't have his name and I believe he travels from Long Island. His next stop will be at Kutztown if you're going down there, or come by our next meet at Brookline. He also does the NJARC meets. You may be able to find him at Hamfests as well. When I last saw him at Brookline last fall, and after I saw him at Kutztown, he sill had a few copies.

In the meantime, if you can send me the data from each Bakelite Block, I can get you the data you need. I will need the numbers and any letters on the side of the block. You may need to hightlight it with some chalk to be able to read it. The easier way to go about this is to send me the model # of the radio, the component list for the radio (Riders or Sams), or both. I can get what you need from that.

If you haven't repacked any of the Philco Bakelite Blocks before, do not be too concerned. They are easy to repack and do not require you to heat them up as I've seen some suggest. Actually, when you heat them, you complicate the whole process. The 2 position tone controls are just as simple.

Does anyone know if Ray will print any more copies of his 4th edition?

Regards,
Joe Devonshire AB1YO

Bruce, et all,
I’m home from shopping with my wife, which won’t mean anything to anyone but Bruce.
After reading most of the posts:
1) The gentleman selling books at our show, Kutztown, etc. is Jon Kummer- Owner of ARC.
2) Ray’s book is available on ARC website www.antiqueradio4.com for $22.95
3) Yes, Ray- a Life Member of NEARC is 96. He doesn’t do repairs anymore. Last I knew (6 months) he was downsizing and looking to move to a smaller place. One of the top 5 most impressive “Radiomen” I’ve ever met.

Bruce Phillips

Former "Coast to Coast AM" Radio Show Host Art Bell, W6OBB, SK
Former "Coast to Coast AM" and "Dreamland" radio host Art Bell, W6OBB, of Pahrump, Nevada, died on Friday, April 13, at his home, the Nye County Sheriff's Office announced. He was 72. A KSNV news report indicated that Bell's family was with him when he died. The Sheriff's Office said an autopsy would be performed.
Bell's long-running radio show trafficked in conspiracy theories, the paranormal, and "dark matter." Ham radio came up too, from time to time. In early 2004, Bell aired an extensive live interview with then-ARRL President Jim Haynie, W5JBP (SK).

"Coast to Coast AM" was syndicated nationwide in the early morning hours and, at its peak, was said to have reached 50 million listeners. Bell produced the show from his own studio in the High Desert of Nevada. Often, after his show was over, he would get together on 75 meters with a group of friends.
Bell retired from "Coast to Coast AM" in the early 2000s, although he had served as a guest host as recently as 2010. He briefly returned to the air with "Art Bell's Dark Matter," which lasted several weeks on the SiriusXM satellite network, but he subsequently got involved with another radio program, "Midnight in the Desert," streamed via the Internet. He quit that show in 2015, however, citing "security concerns" at his home.
Bell was the author of the books The Art of Talk, The Quickening, and The Coming Global Superstorm. Read more. -- Thanks to KSNV and International Business Times

1722. Fwd: [NJARC] Mobile Phone in Museum

Just remember
Reply = Poster
Reply All = Everyone

We have one of these that we'd like to display.

However, we don't have a control head. Looking for one or something similar.

An interesting video HERE.

Thanks,
Al

1723. Philco Model 91-126 ON/Off sensitivity switch

Yahoo group: NEARC_Radio
Date: 2018-05-02 23:13:56 UTC
From: bambuter@...
Topic: 1723 Message: 1723

Hi,

I have just finished stuffing Bakelite Blocks for a Philco 91-126 radio. The Philco Condenser and more book by Ray Bintliff proved very useful.
It turns out that the combo On-Off & Sensitivity switch is intermittent at best. It is listed as part number 7 on the Philco 91 -126 schematic and parts list.

Does anyone know where I can get a replacement or can suggest an optional approach?

Thanks

Bruce Ambuter KB1ORG bambuter@yahoo.com

I'm sure you've tried a shot of De-Oxit or similar contact cleaner.
Radio Shack has one, if there is still a live Radio Shack in your area.

De-oxit from RS is pricey even if you can find it. Plenty of other options from Walmart, Home Depot, Lowes, auto parts stores and just use search phrase "electrical contact spray" to find lots of options. Plus, here's a good discussion on the subject:Antique Radio Forums • View topic - TechSpray Blue Stuff

Topic: 1727 Message: 1727

If you have "beater cabinets" and other "useless" radios that will never be restored, contact Abby below:
Bruce
****
****

Hi Bruce,

Chris and Marcel were both great, but we underestimated our original number and are looking at about 250 now. I currently have 220, so we’re not far off, but no one else reached out to me.

I was wondering if you happened to have any more radios or knew someone nearby that might have a bunch?

Let me know if you have any thoughts. Thanks!

1728. "BORDER BLASTERS"

Yahoo group: NEARC_Radio
Date: 2018-05-15 20:16:02 UTC
From: craig.hardy@...
Topic: 1728 Message: 1728

I grew up in the DC suburb of Bethesda, MD. In HS I got into AM dxing a bit. A high school classmate who had cerebral palsy did a lot of it and we compared notes. The farthest station we received was one in Del Rio, Texas. Because of his limited lifestyle he did more listening than I did and told me about the transmitter over the border, and among other things head them advertise autographed pictures of Christ.

WELL....I was just telling another HS classmate about this and decided to look up Del Rio am radio and found MORE than I planned on! Like me, you're probably all familiar with the great history of WLW in Cinncinatti, but here's the Del Rio story for those of you not familiar with it:

http://vvchc.net/histproj/radio-xera.html http://vvchc.net/histproj/radio-xera.html

1736. Long Reach Nipper tool

Yahoo group: NEARC_Radio
Date: 2018-05-17 02:44:52 UTC
From: TrainBee
Topic: 1736 Message: 1736

I'm looking for a long reach nipper tool. Below is an example of what I'm looking for. So far, the vendor has not responded. Have you seen anything like this, and if so, where can I get it.

I found this on: http://www.supercoproducts.com/ssptools.htm What I'm after is the extended reach nipper on the top.

Thanks.
Joe Devonshire

Super Cross Pliers and Side Cutters Set
- product code # DY89310333

4 piece set that utilizes dual-pivoting points to deliver an extra-long reach and powerful grip. The set includes a needle nose, 45° bent needle nose, flat nose pliers, and wire cutting pliers.

Thanks Dave,

Harbor Freight was my first stop. I thought I had seen a compound action tool there at some point, but I was either mistaken, and it is gone. I did see the one you suggested, but the space I'm working in is too tight. I have about a 5/8 to 3/4" space to work in and the cap lead is going all the way down. I'd like to nip the cap lead off at the end of the cap and use that as a new terminal. I don't think this radio was worked on previously, and I can't imagine Hallicrafters had such poor workmanship.
I'm working on a SX-42. Late 1947 vintage. Here's why I don't understand the workmanship. Nearly all of the caps I've replaced, 13 out of 42 so far, have only had the leads tacked to the terminal. A couple were loose. At first I was clipping the leads and using the old cap ends as new terminals until the ends of the old caps came off of the terminal as I heated up the lead to put the new cap on. Sorry about the convoluted explanation.
What has me concerned now is that even with the long reach nipper, if I heat up the old lead to attach a new cap, the other end may come off. At least I think I can get the soldering tip down into the bottom of the RF section. I was trying to avoid chancing a nearly impossible repair.
I wish I had video capability to share this. Bob "Radiowild" did a soldering video a while back. This would have been a good example of an exception to the rule.

I'll keep you posted.

Regards and thanks.
Joe

I'm looking for a long reach nipper tool. Below is an example of what I'm looking for. So far, the vendor has not responded. Have you seen anything like this, and if so, where can I get it.

I found this on: http://www.supercoproducts.com/ssptools.htm What I'm after is the extended reach nipper on the top.

Thanks.

Hi Craig,

I ordered them today along with the straight and offset versions. I'll let you know how they do after I try them out. The catch with the Co. in CA was that they will not sell to the public due to insurance reasons.

Regards,
Joe

Pretty slick. Thought I'd seen most tools, but never dual pivoting like those! Just looked at Klein Tools and got hung up about page four.
Then googled "long reach diagonal cutters" and got number of items on Amazon, including this:
Robot Check

www.amazon.com/Zenith-Industries-ZN502659-Cutting-Pliers/dp/B06XXMP6BK/ref=pd_bxgy_469_3?_encoding=UTF8&pd_rd_i=B06XXMP6BK&pd_rd_r=N6PVCM6Z8R4EXBNG3FB7&pd_rd_w=bwpQe&pd_rd_wg=ItXuI&psc=1&refRID=N6PVCM6Z8R4EXBNG3FB7

You could keep looking with that same search phrase and find others, I sure?

Howard,

Yes, I did, but the reach to get a nipper in there was too far and the room to move around is very tight.

Thanks,
Joe

I am looking for a Clear Zenith Dial Glass for this 6-S-322.
Pictures attached.
It is 6" round or slightly over.
I'm sure it was used in many other Zenith sets- both table and console.
If you can help me out, let me know.
Thank you,
Bruce

If that item from Retro is plastic instead of glass, and you want an original glass one, you could try my friend Bill Coolihan in Iowa who has parts and fixed me up with power XFMR for one of my Zeniths couple years ago:

This is a pretty neat site. It's just the ticket if you're looking to have a record pressed. Plenty of options to choose from. You can get the different colors that RCA used on those early 45's along with label and jacket options.

Hi everyone,

In my crazy travels, I have discovered that there is an active vinyl record plant in Kenilworth, NJ.

As many of you know vinyl is having a renaissance. I haven’t had the time to check this place out, but their website says they can take you through the entire process from mastering to shrink wrap. Check it out.

http://stereodisk.com/

Best wishes.

I see Walmart advertising 32" flatscreen TV's this weekend for $89.99.
It's not a top brand, and not 1080p BUT it's a pretty big TV.
WHICH REMINDED ME OF THE OLD DAYS OF TV: Muntz TV's were the first sets "under $100". Yup, $99 Muntz. Never had one, and recall they weren't "hot" sets, but hey! under a hundred bucks!

WHICH LED ME TO LOOK UP "MADMAN MUNTZ" AS HE WAS CALLED.
Not just TV's, but cars, auto stereo tape players, etc. I was born in '41 and so grew up in that era, but somehow never heard of most stuff mentioned in this Very fascinating read:

Attachments: 2 described; binary payloads are missing from this source WARC

86 year old NEARC Member Edwin Zemgals in Billerica, MA would like an NEARC Member to have his Radio Collection.
1) You must take it all. There are 40 to 50 radios from parts sets to nice sets. Mostly woods, many early pre 1930 sets. The pictures are from my phone. If they don't show up, email me, and I will send you the pictures.
2) $100 price is no negotiable. My opinion:Retail, they are worth at least $1000.
3) You must remove the radios from his basement. (Good Access).
4) Added bonus: If you or your significant other like outdoor gardens, it's worth the $100 to see the gardens Edwin and his wife have made over the last 50 years!!
This is first come. first served.
Edwin's phone is 978-667 7905
Tell him you are calling about the Radios for sale that Bruce put on the NEARC Yahoo Site.

When a member has talked with Edwin, and committed to the purchase, reply to this post- to let the rest of us know they are gone so other members won't bother Edwin.

Bruce Phillips
President NEARC

86 year old NEARC Member Edwin Zemgals in Billerica, MA would like an NEARC Member to have his Radio Collection.

1) You must take it all. There are 40 to 50 radios from parts sets to nice sets. Mostly woods, many early pre 1930 sets. The pictures are from my phone. If they don't show up, email me, and I will send you the pictures.

2) $100 price is no negotiable. My opinion:Retail, they are worth at least $1000.

3) You must remove the radios from his basement. (Good Access).

4) Added bonus: If you or your significant other like outdoor gardens, it's worth the $100 to see the gardens Edwin and his wife have made over the last 50 years!!

This is first come. first served.

Edwin's phone is 978-667 7905

Tell him you are calling about the Radios for sale that Bruce put on the NEARC Yahoo Site.

When a member has talked with Edwin, and committed to the purchase, reply to this post- to let the rest of us know they are gone so other members won't bother Edwin.

1761. 1st detector /amplifier for Philco 92 - 14

Yahoo group: NEARC_Radio
Date: 2018-05-26 20:20:03 UTC
From: Bruce Ambuter
Topic: 1761 Message: 1761

Hi,
I have been finally repairing several radios that have say for 36 plus years. On such radio is a Philco model 91-14. I replaced all the capacitors and out of range resistors only to find out there is no volume. I can produce a hum by putting my finger on the volume control.
After a bit of searching I found that there is no place voltage on the 44 RF tube. This soon led to finding that the Detector transformer part `1 (Philco 32-1070 (has an open primary. Lesson learned for future , check primary and secondary for expected resistance.
1) Does any one have the above transformer or 2) does any one have a parts chassis I can use. Finally 3) if 1 and 2 fail, I could use some help winding a new primary.
Thanks, bambuter@... or KB1ORG
Also, note I have about 20 - 50 sets I would like to sell in various condition.

1762. Radios in SMOKEY JOE's Theater Production at Ogunquit Playhouse

Smokey Joe's is now playing at the Ogunquit Playhouse thru mid June - I think.
Here are a couple pictures that were sent to me.
There are 226 radios here that came from NEARC members.
CJ sent me some more, but they are imbedded in an email, and I'm not bright enough to get them out, so hopefully he will post them too.

Chris,
Told you I wasn’t any good at this!
When you start a new topic (at the bottom of any post), there is a paper clip icon above the title line.
I don’t think this shows when you are replying to a post.
It looks just like the one you’d see in any email upper icon bar.
You can attach them that way.

I've owned thousands of Old Radios, and half a dozen Edison Cylinder Phonographs, but I've never owned a crank horn phonograph- until now.
See pictures.
I'll admit this is out of my wheel house.
I think there are members in the club who know a lot more about these than I do.
I picked this up in a trade a few months ago.
It is missing :
1) The reproducer head
2) The Angled tube that goes from the Reproducer support that holds the Wooden Horn
3) One bolt that holds the Reproducer/Horn support
4) The start/stop button/rod/mechanism
I also know at least one of the two springs is broken.
I know the guys in Vermont can fix this, as they fixed 3 of my Cylinder sets, but I think with the missing parts and issues it may be too costly to use them.
Does anyone in the club work on these, or have any parts for these?
Advise?
Thanks,
Bruce

What a colorful character! As I started reading the wiki article on his ad campaigns, I thought of Crazy Eddies (a popular slogan being "With prices so low, we're practically giving it all away!!!"). Sure enough, one could claim they copied his zany methods. There was some clever thinking behind the madness, especially the simplified TVs suitable for urban areas.
You have to be a bit mad to name your daughter "Tee Vee".

Thanks for sharing the article, Craig - a fun read. I recall Muntz electronic products as a child but never owned any of them.

Looking forward to the flea market tomorrow!

I'm going to have something unusual to offer the group, as I recently picked up a bunch of wood veneer. I'm not experienced with this stuff, but it looks like just the thing needed to restore the older wood radios. There are several different sizes and types.

If you're a restorer and need this, please be sure and see me at the Brookline flea market. Look for me in front of the antique Land Rover.

Just the opposite. People were pawing through it all day long, but
virtually no one bought anything.

1796. Wall Street Tries Shortwave Radio to Make High-Frequency Trades Across the Atlantic

Yahoo group: NEARC_Radio
Date: 2018-06-05 19:18:15 UTC
From: TrainBee
Topic: 1796 Message: 1796

From the IEEE Spectrum 6/1/18 Wall Street Tries Shortwave Radio to Make High-Frequency Trades Across the Atlantic

Link: https://www.spectrum.ieee.org/tech-talk/telecom/wireless/wall-street-tries-shortwave-radio-to-make-highfrequency-trades-across-the-atlantic

It will be interesting to see if this comes about.

Joe Devonshire

For those of you who've never worked on vintage TV's with CRT picture tubes, a quick primer: to make the negative electrons from the electron "gun" in neck of picture tube travel forward to activate and illuminate the phosphor coating on back of viewing screen, a very high positive voltage is applied to the black conductive coating on the inside of the picture tube "bell". The high voltage wire clips into a "cavity cap" embedded in the glass. There's a soft plastic dust shield on the end of that wire that looks like a suction cup. On early small picture tubes that "anode voltage" is I guess 12 to 15KV, and on 21 to 25 inch tubes it's well north of 35KV. And it's not just a "static" voltage---there's some power there and it'll draw an orange spark.

OK, here's the story:
A fellow I worked with many years ago told of a Saturday afternoon TV home service call. His father in law owned Nard's Appliance and TV in Somersworth, NH. and sometimes he helped out.
On this occasion, the customer was trying to watch a baseball game but his TV had sound but no picture. He removed back of set to investigate, and spotted a heavy wire hanging loose. Noting the clean circle on the side of the dusty picture tube where the wire must have fallen off, he decided to re-attach it. Now, what do you usually do to make a suction cup stick? You LICK it with your tongue, right?
The wife had to answer the door because the fellow had a swollen tongue and could not speak....

1803. GREAT restoration article, plus ADMIRAL story

Yahoo group: NEARC_Radio
Date: 2018-06-18 04:02:13 UTC
From: craig.hardy@...
Topic: 1803 Message: 1803

Folks,
Maybe many of you already familiar with this fellow's articles, but for me it was first time I've read through a restoration article with this much detail and good photos. Yes it's a TV, and many members only work on radios, but well worth the read! I even learned some new ideas on cabinet restoration. Then the next article is GREAT story on the young immigrant Ross Siragusa who built Admiral!

https://www.antiqueradio.org/Admiral24C15Television.htm
https://www.antiqueradio.org/Admiral24C15Television.htm

Dick, I couldn’t find a decent picture of a 405 where I could really see what the knobs look like. I’m not sure, but the knobs on the 405SC at Radio Attic look similar to the knobs from a model 5AC. Sadly, I have only one and it’s cracked. These knobs have a serrated edge. I attached a picture for reference.

Dick, this actually has a pot metal insert which would make me assume that the shafts were flatted or half round. If you have round shafts, these knobs, even though definitely from an American Bosch set, may not have been the ones on your model. Anyway, I attached a couple more pictures. 1.07” diameter at the largest (serrated) part, 0.91” at the base, 0.66 at the waist, and an overall height of 0.78”

1819. MY FIRST TV EXPERIENCES

Yahoo group: NEARC_Radio
Date: 2018-06-21 19:38:25 UTC
From: craig.hardy@...
Topic: 1819 Message: 1819

Folks:
Now that I'm messing with some old TV's I've been recalling couple of my first viewing experiences. We lived in the DC suburb of Bethesda, Md. I was born in Jan of 1941. Dad was a physicist at the National Bureau of Standards, so we weren't poor, but we weren't rich either, and putting my older brother through the expensive Lehigh Univ. from '49-'53 put the Hardy family in frugal mode! So we were the LAST on our block to get TV in 1954--a 21" Stromberg console.
FIRST on our block to have TV was Eddie Gray's family, four houses down the block from us. SO...the FIRST time I saw a TV set was when few of us kids gathered in Eddie's living room and watched Howdy Doody Show. Eddie very authoritatively explained to us (probably gotten from his folks) how it worked: showing us the flat 300 ohm twinlead antenna cable, he said the picture is squeezed down flat coming down that wire, and then expanded by the set up into the picture we were watching! Show premiered in Dec of '47, so this was shortly after that.

FIRST COLOR: We got flyers in the mail inviting us to the local appliance store, Yost's, for a free demonstration of color TV. Mom and Dad and I went and sat in chairs they had set up in showroom and watched "Panama Hattie" on I guess the RCA 15" color set. Some green faces, but HEY it was color! Just checked, and that was part of the CBS series "Best of Broadway", broadcast live from NYC on November 10, 1954, Starred Ethel Mermanm Ray Middleton, Art Carney and Jack E. Leonard.

I bought this Silvertone at 8:00 this morning. It is a beautiful radio, and I don’t have one.
It needs to be repaired, and the cabinet refinished (but all veneer is very good)
As per Howie’s suggestion, I think it would be a nice raffle prize for NEVEE 2/ RADIO 50.
If Craig is willing to do the cabinet, and Tom is willing to do the chassis, it will be donated from Phillips, Hardy, and Scarpelli.

I watched The Wizard of Oz for many years before finding out that landing in Oz turned the picture from B&W to color, as we didn't get a color TV until 1968! ;-)

Bruce,I was wondering if you'd jump in on this one! Great! That cabinet project will get "in line" behind the other two you gave me.What did the Durham seller take for it?

I bought this Silvertone at 8:00 this morning. It is a beautiful radio, and I don’t have one.It needs to be repaired, and the cabinet refinished (but all veneer is very good)As per Howie’s suggestion, I think it would be a nice raffle prize for NEVEE 2/ RADIO 50.If Craig is willing to do the cabinet, and Tom is willing to do the chassis, it will be donated from Phillips, Hardy, and Scarpelli.Bruce

Craig -

Similar story. I grew up in Orono, Maine, a rather rural area. I remember when central Maine got its first TV station (WABI channel 5 Bangor) in 1953. My Dad didn't buy a TV for a couple years, and when he did, we immediately found out that WABI had very little actual content. For a few hours each evening, there was some sort of commercial content, possibly shipped in on a mag tape, but for most of the day, and all of Sunday, the station had to make do with locally produced stuff. There was a local clown show starring Eddie Driscoll, and a back-woodsy outdoor show by Bud Leavitt. But their most desperate effort to fill time was a show called Mini-Quiz. The studio tech/camera man would aim a still camera through a magnifying glass at an object sitting on a table. The magnified object would fill the TV screen, and viewers were invited to call in and guess what the object was. The object I remember best was a French fry. Sure looked weird when blown up to fill the entire 12-inch black-and-white screen. The reward for a correct guess was getting your name mentioned on air - and no one identified the French fry.

I thought about that yesterday, when I bought a 55-inch 4K LED TV that gets 240 channels.

Bill,No tubes or CRT to fail in your new TV. No color convergence to do either. And if you're like me, nothing you want to watch on about 235 of those 240 channels, right? We watch MeTV --like old Andy Griffith shows. And free streaming stuff from Netflix, Amazon, etc. I'm feeding my vintage sets with B&W movies on tape or DVD. Sometimes OTA with converter box.Ah nostalgia!

I've been following this post with quite a level of enthusiasm. It's great to hear the nostalgic experiences from everyone. Being a generation "X"er, one might assume I never saw TV before flat screens and LCD technology. Actually, my experiences aren't too far from others here- just a couple decades later. My family didn't have a new TV until the mid 90s. We usually got surplus from my grandfather who was a TV repairman. I remember our Zenith space command remote that would sometimes cause the TV to go past the channel you wanted. We once had two TV sets on at the same time; one had no sound while the other had no vertical hold. I'd watch one and listen to the other. TVs introduced me to compactron tubes. Anyone remember the sets that, in order to get a picture quickly when powered on, would keep the filaments on with reduced current? I remember watching the orange glow with the TV off thinking something was wrong with the power switch. My favorite TV: Tele-Tone TV149. Craig, I think you took a picture of it.
Thanks to all for sharing your experiences.
Howard

I also remember bringing home my first 'fancy' TV in the early 80's. It was an NEC "Video Monitor" (so they could charge more, still no high definition yet). I was surprised that there were no controls for horizontal or vertical hold, or linearity pots to tweak!
First thing I saw upon power up was news cast of the US bombing Libya. I thought I might have just gotten a new TV to witness the beginning of WWIII.

Yes, Howie, that's a beautiful Teletone you have!Back before they started the dumbing down process with "president's day", we recognized Lincoln's birthday on Feb 12 and Washington's birthday on Feb 22. When I was growing up in the DC suburb of Bethesda, Md Washington's birthday was a BIG deal.Washington's Birthday sales were like none other: typewriters for 99 cents, cars for $22, and one of the big appliance stores had TV sets--guaranteed working--table models for $4 and consoles for$9. In Maryland public schools we celebrated those birthdays but did not have the day off, so it wasn't til I was attending Md. U.in 1958 that I could slip downtown on Feb 22. With my peanut jar full of drinking water and Reader's Digest to pass the time, I got myself camped at the front door of that appliance store, first in line, several hours before opening. Doors opened, and I got in there and got me a $4 TV---a 7" Teletone. We already had the nice family TV--the 21" Stromberg console Dad bought new on Nov 11, 1954 (called Armistice Day back then).But at our weekend place 45 miles north of Bethesda, right over the mountain from Camp David, we had no TV. I parked that Teletone in corner of cabin, built a simple 4 ft dipole antenna with #10 fence wire stapled to an oak stick and weather proofed with asphalt roofing paint, climbed up and nailed it 40ft up in the sycamore tree next to cabin, and dropped 300 ohm twinlead down to the TV. NOW, in all the warm weather months we didn't have to miss Lawrence Welk on Saturday nights anymore! The mountain top blocked a lot of the signal from the stations to the south, so picture a bit snowy, but by golly we had watchable picture and clean sound!The next year I repeated my drill and got one of the $9 sets---a 10 or 12 inch Emerson console which was "my" TV in my room. Only thing I can remember about that Emerson was watching the classic movie "Lost Horizon" on it, and Mike Wallace interviewing Richard Nixon for couple hours prior to the 1960 elections.I was off in the AF in 1963 when Mom and Dad sold both our Bethesda house and the weekend place and retired to Pennsylvania, and don't know what became of those sets.Next recollection from that era was after AF discharge in '66 I dragged a 1955 RCA 21" color console out of back room of father in law's TV shop in Westport, CT and got it working nice for my parents over in PA. 37 tubes, five stages of IF. Remember when reaching in there to adjust the ring purity magnets around picture tube face the hair was standing up on my arm all the way to my shoulder--just had to TRUST that plastic shield around the metal bell CRT to keep from being bitten by the 37KV anode voltage!As I've mentioned here before, father in law said I had a better picture on that set than when he'd sold it new in '55. Credit doesn't go to me, but rather to the improvements in broadcasting over those years....

We were “Dirt Poor”, and our first TV was given to us in 1957 by my “rich aunt”. I believe it was an Admiral floor model.
My father had zero interest in technology, so I quickly figured out how to pull the tubes and test them on the department store tester.
Like Bill, I was on the Rex Trailer Show out of Boston when I was in 3rd grade (1960).
My father who drove very little, driving from NH to Boston would be the equivalent of me driving to Florida today.
My wife, being a Maine girl, did a week on Romper Room with Miss Jean.
I remember watching Bucky Beaver brought to you by Ipana toothpaste- the first toothpaste that could “stand on its head”. Watching Broadwick Crowford on Highway Patrol made me believe I would be a police officer some day. I’ll bet Craig still watches it on ME TV. It was clean fun back then.
I had a paper route before I started 1st grade, and would deliver paper until I got a grocery store job when in High School.
When COLOR TV exploded on the market, knowing I was very color blind, my mean older brother(think Eddie Haskell) tried to convince me that he could see Lucy’s red hair on our Black and white set.
Since we could barely afford to keep an old black and white set going, I retaliated by sending away for the kit I saw in the back of a magazine.
It claimed it could “Turn any Black & white set into a color set in minutes.” Since I was the family tech guy in 4th grade, I figured I could pull it off.
I sent in my hard earned $3, and pretty much sat on the mail box until it arrived.
I was pretty disappointed to receive a sheet of clear “cling on” plastic that was clear in the middle, tinted blue on the top(sky), and green on the bottom.
Honestly, The Lone Ranger wasn’t bad that way.

Moving forward, I got my 1st radio in 1962 as a prize for increasing the circulation on my paper route.
It was an earphone only kit, 1 diode, 2 transistor set build on a cardboard circuit tray on top of a plastic base that held the 2 “D” cells.
Upright on the back was the tuner built out of 2 cardboard discs where you wound the coils. It looked like a sunflower
A “Church Friend” of my father’s who had success building Heathkits helped me build it.
I was forever grateful. To this day, I have never seen another, and I understand why people sometimes will spend “stupid money” to get something they had as a child.
My second set was a Westinghouse transistor, I begged for Christmas in 1964.
My mother got it for $3.95 and 4 Nescafe Coffee labels. It was my only Christmas present that year, and it sits in a display case in my collection.

The rest of that collection is way too long a story.....

Bruce

The single "family radio" in our home in Bethesda was a Colster. I learned from Dad what TRF was when I guess I was about 8 or 10. I strung about 60ft of wire from my bedroom window out to the Douglas fir tree in backyard and listened to my crystal set--if I could get the cat's whisker onto a hot spot in the crystal, then put the little glass dome back on without disturbing it....When I was I guess 10 or 12, two old maid sisters I mowed lawn for gave me a Majestic console that worked. Had it in the basement furnace room which was my first photo darkroom. Looking back, think it was superhet---probably mid 30's when others used the Majestic name. But memories of that set returned couple years ago when I got a Majestic via craigslist from a fella in Orange, MA.Earlier, true Majestic TRF set, 1928. Works nice. Got the special stranded bronze tuning dial cord with nice step by step instructions from place out in Wisconsin or Michigan. Photos attached.

Subject: Re: [NEARC_Radio] MY FIRST TV EXPERIENCES

We were “Dirt Poor”, and our first TV was given to us in 1957 by my “rich aunt”. I believe it was an Admiral floor model.My father had zero interest in technology, so I quickly figured out how to pull the tubes and test them on the department store tester.Like Bill, I was on the Rex Trailer Show out of Boston when I was in 3rd grade (1960). My father who drove very little, driving from NH to Boston would be the equivalent of me driving to Florida today.My wife, being a Maine girl, did a week on Romper Room with Miss Jean.I remember watching Bucky Beaver brought to you by Ipana toothpaste- the first toothpaste that could “stand on its head”. Watching Broadwick Crowford on Highway Patrol made me believe I would be a police officer some day. I’ll bet Craig still watches it on ME TV. It was clean fun back then.I had a paper route before I started 1st grade, and would deliver paper until I got a grocery store job when in High School.When COLOR TV exploded on the market, knowing I was very color blind, my mean older brother(think Eddie Haskell) tried to convince me that he could see Lucy’s red hair on our Black and white set. Since we could barely afford to keep an old black and white set going, I retaliated by sending away for the kit I saw in the back of a magazine.It claimed it could “Turn any Black & white set into a color set in minutes.” Since I was the family tech guy in 4th grade, I figured I could pull it off.I sent in my hard earned $3, and pretty much sat on the mail box until it arrived.I was pretty disappointed to receive a sheet of clear “cling on” plastic that was clear in the middle, tinted blue on the top(sky), and green on the bottom.Honestly, The Lone Ranger wasn’t bad that way. Moving forward, I got my 1st radio in 1962 as a prize for increasing the circulation on my paper route.It was an earphone only kit, 1 diode, 2 transistor set build on a cardboard circuit tray on top of a plastic base that held the 2 “D” cells.Upright on the back was the tuner built out of 2 cardboard discs where you wound the coils. It looked like a sunflowerA “Church Friend” of my father’s who had success building Heathkits helped me build it.I was forever grateful. To this day, I have never seen another, and I understand why people sometimes will spend “stupid money” to get something they had as a child.My second set was a Westinghouse transistor, I begged for

Christmas in 1964.My mother got it for $3.95 and 4 Nescafe Coffee labels. It was my only Christmas present that year, and it sits in a display case in my collection. The rest of that collection is way too long a
story..... Bruce

1832. Photos from the NEVEE Spring Brookline Event

Good Evening, All -

168 photos from the June 2nd NEVEE Spring Brookline Event have been posted to our Facebook site. Posting on our Yahoo site will follow in the coming days, assuming the site cooperates (the Yahoo site is a little dodgy at times).

Enjoy!

https://www.facebook.com/pg/NewEnglandAntiqueRadioClub/photos/?tab=album&album_id=1999316873413754 https://www.facebook.com/pg/NewEnglandAntiqueRadioClub/photos/?tab=album&album_id=1999316873413754

Regards,
John

Anyone up for a BIG project? I have a diamond in the rough here. Definitely rough. Done right, though, they command a good price. One just sold for over $2500 on eBay last week. This one needs complete restoration. The chassis is rusty and the cabinet needs refinishing. The veneer is lifting in some spots but it’s all there. I’m asking $300. That includes a new roll of grille cloth. If you’re interested, I have more pictures.
Cheers,
Howard

Topic: 1819 Message: 1842

I've enjoyed reading this and all the responses, allowing me to reflect on something we've come to take for granted.While I'm a late Boomer II generation, I experienced tube televisions and radios from my parents first-hand.
While I was a child, we had a 17" Philco B&W that was as reliable as they come. My earliest TV watching memories are of "Captain Scarlett and the Mysterons", a rare "Three Stooges" short, and a vague recollection of "The Flintstones". We initially lived in Wantagh, New York (on Long Island), where we received multiple stations. We later moved to the Catskills in upstate New York, where we had to rely on an antenna attached to the porch to receive a single station, WRBG channel 6 from Albany, NY, an NBC affiliate at the time. That was a bit of a rude awakening for us children used to Long Island suburbia (parents taught in the Levittown school system, and our house was part of the William Levitt development of Long Island). We watched everything in black & white, and only once in a while did I get to see color TV at a friend's or neighbor's house. I was particularly fascinated by seeing the original "Star Trek" series in color. Thinking about "The Wizard of Oz" that John N noted, as a child I heard it was filmed in color but didn't see it in color until my parents took us to see a special viewing at a local cinema.

My father finally sprung for a color TV in 1975. His cousin was always purchasing the latest and greatest in electronics, selling some of his carefully used electronics to my dad. For example, he sold his Texas Instruments TI-50 calculator around 1974 or 75 to my dad. At the time, it was a pretty high-end device (and I loved playing with it). My cousin was upgrading his television and sold my dad his two-year-old Sony Trinitron 19" color TV for roughly $200. At the time, the Sony was a highly-rated TV with an excellent picture, and it didn't disappoint. We children were so excited on the news and felt we had caught up with everyone else. On a teacher's income, my father was a frugal spender, so color TV was a low priority purchase. The Philco was moved to my bedroom, which I shared with my brother. It finally stopped working a few year later, and which point we got rid of it.

My dad liked quality, so he was willing to spend extra money with the expectation it would last. So he is the reason I collect German radios. He bought his radios at Willigs in Long Island - a Telefunken Gavotte 7 Export, followed by a Telefunken Opus Royal (an Opus 7-based console) with many Telefunken accessories (reel-to-reel, microphone, etc.).

That Philco was a great TV that lasted at least 15 years, used on a daily basis without any problems.
Thanks for raising the topic, Craig - a nice walk down memory lane.
John

Folks:

Now that I'm messing with some old TV's I've been recalling couple of my first viewing experiences. We lived in the DC suburb of Bethesda, Md. I was born in Jan of 1941. Dad

was a physicist at the National Bureau of Standards, so we weren't poor, but we weren't rich either, and putting my older brother through the expensive Lehigh Univ. from '49-'53 put the Hardy family in frugal mode! So we were the LAST on our block to get TV in 1954--a 21" Stromberg console.

FIRST on our block to have TV was Eddie Gray's family, four houses down the block from us.

SO...the FIRST time I saw a TV set was when few of us kids gathered in Eddie's living room and watched Howdy Doody Show. Eddie very authoritatively explained to us (probably gotten from his folks) how it worked: showing us the flat 300 ohm twinlead antenna cable, he said the picture is squeezed down flat coming down that wire, and then expanded by the set up into the picture we were watching! Show premiered in Dec of '47, so this was shortly after that.

FIRST COLOR: We got flyers in the mail inviting us to the local appliance store, Yost's, for a free demonstration of color TV. Mom and Dad and I went and sat in chairs they had set up in showroom and watched "Panama Hattie" on I guess the RCA 15" color set. Some green faces, but HEY it was color! Just checked, and that was part of the CBS series "Best of Broadway", broadcast live from NYC on November 10, 1954, Starred Ethel Mermanm Ray Middleton, Art Carney and Jack E. Leonard.

Good Afternoon, All -

The Yahoo site has been cooperative today, allowing me to upload the 168 photos from the June 2nd Brookline swap meet and (finally) 301 photos from RADIO 49. All photos are on the Facebook site as well.
Unfortunately Yahoo re-orders the photos and doesn't match the order I posted (or took with my camera). When I have time, I will re-order them to match, but it's a bit of work to override some internal Yahoo semantic.

Enjoy!!

Regards,
John

I have also been enjoying this thread. I grew up in Plymouth, MA. in the 50's and 60's. We had a stacked conical on the roof aimed towards Boston some 35-40 miles away, and we also received Providence, RI stations. But I remember when it was just CBS and NBC, then ABC signed on. We had a 1949 Majestic 14 or 15" table model which seemed to break down at least once or twice a year. It e\was bad news when they couldn't fix it in place and had to take the chassis to the shop...that meant no TV for several days. Better sets followed but we didn't get color until 1966...a beautiful Zenith 21" rectangular screen console.

1846. Zenith waited on color

Yahoo group: NEARC_Radio
Date: 2018-07-02 16:37:14 UTC
From: craig.hardy@...
Topic: 1846 Message: 1846

As mentioned here before, my late father in law was in the radio/TV sales repair business for 40yrs. Benson Radio in Yonkers, NY from 1930 then Benson TV in Westport, CT starting in 1951. I met and married his daughter in '63. He carried RCA and Zenith. Preferred Zenith of course, but carried RCA for customers who still wanted RCA. Told me Zenith held back on color because of the big scare about x-radiation from GE sets. GE recalled some sets and modified them because of "excessive" x radiation from high voltage cage. I read a technical article back then that said the x-rays just two inches from the GE high voltage cage was no greater than what you'd get standing by any brick wall or other edifice because of above ground nuclear bomb tests in our generation. But as we all know, the general public is easily spooked by things they don't understand.
While on this subject of vintage TV's I'll digress a moment. Remember the "compactron" tubes? Multiple tubes in one glass envelope with many pin base. Reduced the tube count and cost of sets, but LOTS of heat from those suckers! When GE introduced their 11 inch "Portacolor" set in 1966 it was the first color TV for under $250. $249.95.
Yup, and they worked fine! But those compactron tubes running hot as firecrackers on the cheap printed circuit boards crammed in a small set became a serviceman's nightmare! Those 12 pins would get fused to the socket and when you tried to tug the tube out of socket a whole chunk of the charred circuit board came with it. NOW what do you do?
Lot to said for good ole hand wired Zeniths with steel chassis....

1847. NEARC/NEVEC Elections for 2019/2020

Yahoo group: NEARC_Radio

From: radioorphanage@...
Topic: 1847 Message: 1847

All NEARC Members will receive a ballot with their copy of RAVEN about September 6th+/-.

The following 5 NEARC Members will run unopposed for President, Vice President 1, Vice President 2, Treasurer. And Secretary.

President : Howard Mariotti- Howard will be NEARC's new President. As a "Working Man", Howard will be the youngest President NEARC/NEVEC has ever had. As President, Howard plans on concentrating on the Publicity aspect of NEARC, and establishing a Publicity and Promotion Team to present NEARC/NEVEC to the people who don't know us yet- including Website, Facebook, Paper and Internet Advertising, You Tube, and any other way possible. Please consider being part of this Team, as this is the biggest "hole" in our organization.

Vice President 1: Alan Finger- Alan has been Vice President for 6 years. As Vice President Alan is responsible for Radio and Vintage Electronics News (RAVEN) - NEARC's quarterly publication. Currently, along with Joe Devonshire, Larry Szendrei, Charlie Perkett and other in and out Editors and Contributors, NEARC produces one of the best Vintage Electronics Newsletters in the country.

Vice President 2: Al Purkis – Al Purkis has been Vice President for over 2 years. As Vice President Al is responsible for three great Radio Show/ Flea Markets per year. Currently, along with Swap Meet Chairman Paul Dumont, Assistant Swap Meet Chairman Roger San Soucie, Jeanette and Jim Ligouri , Paul Buresh, and In and Out Assistants bring you NEVEE/ RADIO, Spring Brookline, and Fall Brookline every year.

Treasurer: Gerry Pacht- Gerry Pacht has been NEARC's Treasurer for about 5 years. He handles NEARC's financial obligations, and produces a meticulous year-end financial statement every year.

Secretary: Paul Buresh- Paul has been Secretary for at least 4 years. He is currently working on a partnership for NEARC with You Do It Electronics in Needham, MA that could bring significant exposure to NEARC/NEVEC.

****

2. The following 9 NEARC Members will run for the 6 Director Positions :

Walter Clay

Joe Devonshire

Bob Harris

Ted Neff

Bob Masterson

William Shenette

Ken Silvestri

Larry Szendrei

Adam Vaughn.

This, in itself, will make an interesting Election in the Fall, as only two of these gentlemen are currently Directors.

I have suggested that each candidate prepare a short (campaign) outline introducing themselves and their interest in NEARC/NEVEC to post on the NEARC Yahoo Group as soon as the Fall Brookline RAVEN is published (September 6 +/-).

Each Director is expected to offer support to one or more of the following:

1) Radio Shows

2) NEARC's publication RAVEN

3) The soon to be Publicity Committee

Any NEARC Member can volunteer in any of these support areas

****

3. These positions are appointed by the President, but the following members have already agreed to keep them if asked:

Tom Scarpelli- Membership Secretary

Paul Dumont –Flea Market Chairman

Roger San Soucie- Assistant Flea Market Chairman

Ross Hochstrasser- Training Coordinator

John Gibbons- Photographer, Face Book, and Yahoo Group

Joe Coco -Web Master

Howard Mariotti Contest Coordinator

Alan Finger- Yahoo Group & RAVEN Editor (Internet)

Charlie Perkett- RAVEN Editor(Printed), but Charlie is suggesting someone else knows how to do the printing and sending of Snail Mail RAVEN.

4. Along with Ross Hochstrasser being the Training Coordinator, Larry Szendrei and Jim Bulzniack have agreed to team up with Ross as Training Coordinators to assist in upgrading NEARC/NEVEC's Training capabilities.

5. NEARC/NEVEC is in excellent financial condition. There is $20,000 +/- in the treasury.

6. I know of no specific issues with the Club- other than continuing on the path toward a Vintage Electronics Club over an Antique Radio Club, and building more publicity for NEARC/NEVEC.

7. All Radio Shows- NEVEE/RADIO and Spring and Fall Brookline are booked from now through 2021. See attached NEARC Calendar.

Things Bruce Phillips will be doing for NEVEC before or after 1/1/2019

1) I'll have Howard's back – just like Charlie did for me.

2) Run the Raffle at NEVEE 2

3) Work with Joe Coco and John Gibbons to "capture and respond to" NEVEC Website and Face Book traffic.

4) Offer support as a Member (but not leader) of a Publicity and Promotion Team.

5) Make a final Presidential plea for 40+ Articles for RAVEN.

6) Make changes to the current NEARC Constitution to bring it up to date with changes that have happened to the club and submit it to the Officers of NEARC/NEVEC for vote.

6) Resubmit NEARC's nonprofit status changing to new Officers and NEVEC in early 2019

7) Plan a group of Speakers to speak after NEVEE 2/ RADIO 50.

I have high respect for all NEARC Members mentioned above.

Please vote before Fall Brookline, but wait to see the Outlines from the 9 Members running for Director(s) before making your decisions.

Thank you,

Bruce Phillips

President NEARC/ NEVEC

1848. Long Time NEARC Member Steve Siter has passed

I've been informed that long term(25 years+) NEARC Member (#247) Steve Siter passed away yesterday.

Steve was a huge fan of Heathkit, and owned most of their products at one time.
The hard to find AR-1 Receiver in my collection came from Steve.

He was diagnosed with Parkinson's about 5 years ago. He continued to sell Heathkit products out of the back of his van at the Brookline shows until last year.

No details are known at this time.

His wife is in my prayers,
Bruce

The hard to find AR-1 Receiver in my collection came from Steve.

He was diagnosed with Parkinson's about 5 years ago. He continued to sell Heathkit products out of the bac k of his van at the Brookline shows until last year.

No details are known at this time.

His wife is in my prayers,
Bruce

Hey everybody, I have tried unsuccessfully to post to this group several times. I put something in the subject line, I obviously fill out the body, yet it tells me that an “empty message can’t be sent” every time I hit send. So frustrating. I’m looking for someone in the area to do some cabinet work for me. I am just behind and could use a hand. Thanks!

My son has one of the little $80 ones that works: has video, GPS with auto-homing. I'll talk to him. Although for that small money any club member already planning to be there could just get one and use it! As you know, I did low altitude oblique aerial photography for 25yrs using planes and small helicopters. Whenever folks ask me about drones my instant reply is, "NO. I want to be up there having fun, not standing on the ground with a stupid control box!"
I used large format film camera and also shot with mini-DVD video cam mounted on the open door frame. I still have a good digital camera for stills and could pick up one of the solid state camcorders. Last five years I was using Robinson R-22 two place heli from CR Helicopters in Nashua. Hourly rate with pilot was $250/hr. Somewhat higher now, I'm sure, but could call Bob and find out. Nashua is close enough to Brookline that I could do a slow fly around, stills and video, with only hour or less of fiying time!Could even set down there and have folks with a little extra cash go up briefly.The 4 place R-44 is hundred or so bucks more per hour, but could take up 3 people at a time.Talk about making it a special day! What did the Bel Aires cost? I notice there's $20K in the NEARC kitty.....

HELP!

I'm having trouble finding info on this old Crosley beast I picked up down in Nahant this morning.

It's a Crosley with about a 12" CRT best I can judge with ruler without taking chassis out of case. Magnetic deflection, magnetic focus, with ion trap. Label on CRT bell too faded to read. There's a sticker that reads "ion trap". I read Phil Nelson's nice long article about restoring a Dumont that had a rebuilt CRT. Says rebuilders add that label when they've used a new gun that requires it, whereas the orig. tube did not.

His Dumont had special tuner that continuously tunes from channel 1 to 13, and since FM is there between 6 and 7 the set has great FM also.
His Dumont had the two bars tuning eye instead of the circular pie type.

THIS set I got has the tuner and eye features of Phil's Dumont. Also, I've read that post war Crosley's often had RCA chassis.

Referring to attached photos, note that the label in cabinet mentions set includes inventions of RCA and Dumont. Also note in my closeup of the tuner it has TV and FM, and the crank type knob rotates a a continuous tuner dial--like Phil's Dumont.

Looking in all the usual places, I've so far been unable to find any listings or references to the model number on cabinet label:
Crosley 9 607M-1

Chassis has monstrous power transformer and huge high voltage cage like RCA chassis's I've read about. This beast weighs 94 pounds.

Yeah, it's a bit ugly looking at the moment with the plastic safety glass unglued and sitting there against the CRT, but the wood cabinet is actually in excellent shape.

Craig, I thought about you. I’m not sure where you would land the R-44 or what kind of arrangements need to be made with the BEC, but I’m all for the proposal that you feel would be best. Of course it would need the approval of the other board members.
I looked at some of the drones and they are rather inexpensive but I think I would end up buying it and it would sit on my shelf until October 5th at which point I would hastily try to learn how to use it.

From: Craig Hardy
Topic: 1853 Message: 1861

Howie,I'm sure my son would love to come to the meet and fly the drone, but he's a real busy dad with their three kids and their activities. It would be just our luck that he'd have to take one of them to a sports activity that couldn't be skipped that day. But I'll certainly discuss it with him. The other thing is, the drones are fragile and stuff breaks when they mess up--would want to have at least one spare on hand. Flying 'em occasionally in our field is one thing, but depending on successful operation when lots of people are there and no "rain date" option is another matter!NO problem landing R-44 there---we just stay couple hundred feet away because of dust and debri kicking up. What's "BEC"? Nice thing about helis is NO FAA flight rules outside of controlled airspace at airports. Once in Dover my pilot set us down right in an elementary school yard to make things steadier while I was reloading my camera. It was August and no kids there, but you get the idea! Down below about 50ft they make wonderful lawn sweepers.Of course Brookline is an electronics show, not an air show, but a lot of folks would probably love to go up for 5 minutes. My last photo flight was Oct 31, 2008, but if I could afford it i'd be up all day, every clear day! I've spent my time on motorcycles and snowmobiles, but IMO the heli is the ultimate toy! Just checked my map. Brookline is just 9 miles from Boire Field in Nashua, we go about 80mph cross country, so that's about 9 minutes. With engine warmup, tower clearance in the pattern, and 5-6 minutes cool down at end of flight....figure about half hour for the round trip. Both fixed wing aircraft and helis are billed by engine meter time.My driving time from here to the Nashua field is about 75-80 minutes plus the Everett tolls. Straight line flying time from my yard is 25 minutes. For photo flights I could have had them come here to pick me up, but that would have meant missing out on 50 min of airtime that I'm paying for anyway, so of course I always drove to the field! I just checked CR Helicopters website. $275/hr for the R-22, $450/hr for the R-44. For just a photo flight and few folks taking short rides at Brookline, R-22 would work . BUT if quite a few are interested, the R-44 is better choice because pilot is taking up 3 passengers at a time. Bottom line: $900 would allow nearly an hour and a half on site at Brookline, taking up three people at a time. When they go to fairs I think they take folks up for about 6 to 8 min.
As you must have gathered by now, I could ramble on for another half hour on this subject, but this should be enough for you to discuss with others if you wish.

In case you get to worrying about quality of photography shot through a plastic window, the answer is: there is none. The Robinson doors just lift off their hinges in seconds, and for photo flights we always remove them and leave 'em in the hangar.If it's cold you dress for it. If it's raining or snowing hard you're not going anyway...

1864. "Crosley" Dumont TV

Yahoo group: NEARC_Radio
Date: 2018-07-18 01:35:19 UTC
From: craig.hardy@...
Topic: 1864 Message: 1864
Attachments: 8 described; binary payloads are missing from this source WARC

Well gang, this set Dan gave me yesterday in Nahant says
"Crosley" on the dial escutcheon and on the label glued inside the cabinet, but the chassis is definitely identical to the Dumont RA-103 console that Phil Nelson restored:
https://antiqueradio.org/DuMontRA-103Television.htm
https://antiqueradio.org/DuMontRA-103Television.htm

The cabinet label reads Crosley 9 607M-1, but can't find info on that model number anywhere! Bruce says he thinks it's a 9-407, and Radio Museum for that model looks identical to mine. So the mystery remains, WHY the 9 607M-1 on my cabinet label which has obviously been glued in there forever?

My B&K tester indicates that the 12JP4 picture tube is good. From the labels on it, it's a rebuilt tube, "guaranteed for 12 months". From Phil's article we learn that the "ion trap" sticker next to rebuilder's label means the replacement gun is type that needs one. And there IS one on the neck of this tube.
Opened it up today. Big mouse nest, complete with one dried out mouse carcass, in corner below tuner but can't see any chewed wires or components.

This is a "table top" 12 inch set but not what you'd call "portable". Chassis alone weighs 65 lbs and whole set is 94 lbs. 28 tubes, counting the CRT and tuning eye, the latter being the 6AL7GT side by side green bars instead of the usual "pie" type.

Tuner is pretty interesting. Crank type tuning knob rotates a geared down illuminated dial that goes continuously from channel 1 to channel 13, AND FM radio band is there between 6 and 7. And there's a phono input jack on back of chassis.

Wood cabinet is tight and finish still pretty acceptable with Old English treatment. The safety glass was fallen out loose because the plastic holders had disintegrated. The glass washed up OK, but has flaws around edges: it's not just a piece of glass, but rather a sandwich of two pieces with plastic in middle which has started to de-laminate.
I could replace it with a piece of plexiglas, but that wouldn't be scratch resistant. Regular glass wouldn't project from CRT implosion. Guess it won't cost much to have an auto glass shop cut me a piece.

Phil Nelson (Phil's Old Radios) says his Dumont is his favorite performer of all the sets in his large collection, so I guess it was worth the hike down to Nahant to grab this freebee....

Photos attached....

From: craig.hardy@...
Topic: 1865 Message: 1865

Forgot to mention in my last: closeup pick of the "delay relay".
Here's what Phil says about that:
Another notable feature is the time delay in the power supply. This involves an electromechanical relay, a 6AL5 tube, and a few other components. In the words of the DuMont service manual:
The relay circuit has been designed so that the relay is energized approximately ten seconds after the power is applied to the television receiver. In this way all capacitors and other components are protected from the high surge voltage which otherwise would occur before the tubes heated up and started to draw plate current.

Only DuMont would make such an investment to improve the television's longevity. Most 1940s manufacturers simply ignored the surge issue. Some later TVs, such as my 1958Philco Predicta https://antiqueradio.org/philc12.htm or 1961 CTC-11A https://antiqueradio.org/RCACTC-11ATelevision.htm, get a soft startup thanks to an inexpensive thermistor in the AC power line.

Craig, you are the 2nd person I've heard from in less than a month to mention the similarity between the Crosley 9-407 and the Dumont RA-103. It seems extremely likely that Dumont did make it for Crosley, or that Crosley purchased chassis and put them in their own cabinets. After the war, when many radio companies were trying to get on the television bandwagon, Dumont and RCA, with more TV experience and manufacturing capacity than just about anyone else, made chassis or entire sets for many manufacturers. The RCA 630TS was the most well-known and prolific example, but the decidedly upmarket RA-103 also found some takers.

Your picture #3 shows the model clearly as 9-407M1, rather than 9-607M1, so I don't know where you found the "607".

This is certainly a worthy set to restore. Keep us posted on your progress!

Mark,You've just solved the "mystery" caused by my own mis-reading of the cabinet label! When I first got it home, and before removing chassis, since I couldn't get my head in there close enough to focus on the label I held my digicam in there and snapped a pic and then looked at image. Wrote the number down on a piece of paper and then went online to research the beast, coming up with nothing, of course! Then with chassis out I got a good straight on pic of that label, spread it around to everybody along with other pics of the set. The answer--my misreading of the label--has been staring me in the face this whole time and YOU are the first person to notice it--thank you!At 77 I like to think I'm not getting senile--I can still remember the names of my wife, family members and friends, where the bathrooms are in this big house, go on long scrounging trips and find my way back home the same day--but who knows....I'll definitely be restoring this set but there are some other projects ahead of it: refinishing three radio cabinets for Bruce and refurbishing the mechanism and electronics in the big Capehart radio/phono with cabinet still in showroom condition that I lugged home year and a half ago. (pics of that attached).

From: craig.hardy@...
Topic: 1874 Message: 1874

I read wikipedia a lot to gather information, but I've noticed for years that it's pretty good for technical subjects, but have your salt shaker out when on political subjects. Case in point:
Few years back one of my wife's liberal friends was raving about Iceland, where she'd just visited. Think they have pretty advanced welfare system there, or something like that which appeals to folks like my wife's friend. SO...I looked up Iceland and the Wikipedia article painted a picture of Iceland like it was about the best system in the world. The DAY AFTER I read that article Iceland declared something like national bankruptcy!

Couple days ago I pointed you folks to the wonderful Wiki article on Allen B. DuMont.

This evening I read the Wikipedia article on "Cathode Ray Tubes". It's a very long article covering the subject well, from Hittorf's crookes tube in 1869 right up through color CRT's with lots of detail about the challenges and intricacies of the latter.
But you know what? Not a single mention of Allen B DuMont!!!
It seemed to credit Japanese engineer Kenjiro Takayanagi with invention of the CRT. Looked him up, and yes he did pioneer electronic television in Japan, but never got much credit in the western world. Ironically, he was born about same time as DuMont.

They say anyone can contribute to Wikipedia. So, for the first time I DID that a few minutes ago.

At the top of all wiki articles there's an "edit" box. Click on it and voilla, you're in.

I went to the wiki article on DuMont and copied a paragraph about his work in the 30's and how his work made modern television possible, and then returned to the "Cathode Ray Tubes" article and pasted it in the appropriate place. I tried to bold face his name, but that didn't work, but anyway it's in there now!

One thing I've noticed about wiki technical articles for years: foreign scientists and inventors are often mentioned very extensively while Amercans are not....

From this weeks ARRL Newsletter....

RadioShack "Express Stores" to Open in HobbyTown USA Locations
According to a July 13 article in the New York Post, RadioShack is planning to open "express stores" within HobbyTown USA locations. The nearly century-old, twice-bankrupt retailer has signed a deal with HobbyTown USA to put a mini RadioShack outlet in some 50 HobbyTown USA stores across the country that would sell items that might appeal to radio amateurs and experimenters. Those locations will be identified with RadioShack signage. HobbyTown markets remote-controlled cars and boats as well as drones and other hobby-related merchandise.

RadioShack shuttered all of its company-owned retail outlets. Its last unsuccessful effort to bail itself out of debt involved a deal with cellular provider Sprint. HobbyTown USA has 140 retail outlets, and, according to the Postarticle, RadioShack eventually could carve out a presence -- on the order of 500 square feet -- in all of them. Stores in HobbyTown USA's headquarters town of Lincoln, Nebraska, as well as in Parker, Colorado, and Mooresville, North Carolina, will be among the first to host RadioShack express concessions.
"HobbyTown is purchasing the RadioShack merchandise and offering it to its hobbyist customers who need the tools, wires, and other accessories that RadioShack makes," the Post article said.
The article quoted Steve Moroneso, chief executive of General Wireless Operations Inc. -- an affiliate of hedge fund Standard General, which acquired RadioShack in 2015 -- as saying that RadioShack's strategy now is not to own brick-and-mortar stores. RadioShack came out of bankruptcy in January with 400 dealers, an online retail presence, and a distribution center. General Wireless acquired the 1,743 retail outlets that survived RadioShack's 2015 bankruptcy.
Moroneso also told the Post that there is "plenty of interest from dealers who want to open a full-line Radio Shack." Read more.

Craig, you are very much correct about Wikipedia. It’s definitely a great resource and I’m glad it’s there but, like any other information portal that anyone can contribute to, inaccuracies or misleading information are commonplace especially about topics that are either political or that very few know about. When it comes to research in the vintage electronics arena, I rely heavily on the US trademark and patent office and the IEEE since they contain legal documents that have recorded what I consider important historical events.

Sadly, I’ve learned that even some of our most esteemed organizations display inaccurate data. You probably remember visiting me in West Boylston in the historic district formerly known as Oakdale. My house is listed on the national register of historic places as “the John Anderson house” since it was he whom allegedly built it. My research however, which mostly consists of tax records and registry of deeds land records, has surprisingly revealed a completely different person of historic significance.

I’m happy though, that the majority of the vintage electronics information on Wikipedia which I have validated, has a reasonable level of integrity.

Howie,Thanks. I never thought of the other sources you mention, and will have to check. If I stumble I'll consult you for advice!My Dad once worked for the patent office. Born in Kentucky in 1900, family moved to Spokane, WA in 1909 and he grew up there.Got Chem Engineering degree from WSU and interest was petroleum. He had job offers from oil fields like Bartlesville, OK, but didn't think raising a family near the oil fields, so took the job in DC which was still a quiet burg in 1925. Mom joined him in '26 and they got married. His job at Patent Office was reviewing Chem. Eng. patent applications. Lot of fine print reading and he was already wearing glasses. He was able to transfer to a job at the National Bureau of Standards without loosing any seniority since that was also Dept. of Commerce. His specialty was viscosity of petroleum, which is physical properties, so he was classified as a physicist til he retired in 1963. His little part in the Manhattan Project was devising a method to measure viscosity of heavy water and running the tests. You know how every so often there are scams that come down the pike claiming to get something for nothing? Well Dad said even in 1925 they had a form letter for "perpetual motion" device applications.

Cynthia and I had the chance to stop by RAVEN Editor Larry Szendrei and his wife Elaine's house on my way back from Maine earlier today. They showed us their home and Larry's collection of Radio's and Communication Gear. What I liked the most was the Tesla Coil that Larry had built !
It was a hoot.
His technical skills are leagues above mine.
I hope the 3.2Meg picture comes through the small passageway to this NEARC Yahoo Group.
So, if the little lady is on your case about your collection of "stuff", just say, "OK then, I'm gonna build a Tesla bigger than Larry's". Seems to be OK with Elaine.

Joe, and others in Maine.
There is still a full Radio Shack store on Main St. in Mexico, Maine, with the component wall you remember from 25+ years ago.
It is run by a gentleman who fixes anything from tube radios to laptops.
I believe it also lists under Dyer Electronics
It is 70 miles ENE from you Joe.
I knew the guy was a Radio Shack Franchise, but I was blown away by all the components and other he still stocked.
If you get that far, drive another 30 miles north up Route 17 toward Rangeley just before sunset to view the guaranteed best sunset of your life overlooking Mooselookmeguntic Lake from “Height of Land” where the Appalachian trail crosses Route 17.
Watch out for Moose- I warned you,
Bruce

Thanks Bruce,

I'll put that on our to do list. BTW... over in Belfast, Macleods Furniture and Appliances still maintains a quasi Radio Shack presence. There were a franchise site at one time. http://www.macleodsfurniture.com/ I get over there once a year or so to p/u some solder and take a look around. Of course we stop at Darby's for lunch.

Regards,
Joe

Regarding the ‘Height of Land’...

My father and I were on a last fishing trip of the season north of Eustis the summer before I started college...we headed back and reached the Height of Land just at sunset. Spectacular doesn’t due it justice...I took a photo which stayed with me for years, I think it’s still around somewhere. I highly recommend seeing the view, with or without the sunset.

Also looking for value of this clock radio.
Clock keeps great time. Poor AM reception, but chassis is designed with jumpers to connect phonograph, so I have an FM tuner connected instead. More to listen to there, including XM I rebroadcast around the house.
Thanks

1886. 2018 Fall Brookline Training Sessions

Yahoo group: NEARC_Radio
Date: 2018-07-27 14:04:12 UTC
From: ne1s@...
Topic: 1886 Message: 1886

Training Classes for Fall 2018 Brookline
Your NEARC/NEVEC Training Committee will be offering 3 classes at the Fall 2018 Brookline meet on Saturday October 6. Note that the first one necessarily starts bright and early at 7AM. The other two classes will run simultaneously and start as soon as the sellers have cleared the hall and we have “rearranged the furniture.” We decided to run these two classes simultaneously as they are targeted to different audiences.

1st Class: Vintage Electronics Pickers 101
Presented by Bruce Phillips, starting at 7:00 AM in the Tailgating area
Join Bruce Phillips for Vintage Electronics Pickers 101 at Fall Brookline 2018. The Picker’s motto is “You Snooze- You Loose”, so be there by 7:00 AM and be ready to move quickly during this NEARC/NEVEC Training Session.
Pickin’ at Brookline is a lot different than that show you watch on TV. You have a lot of “competition” at Brookline, and the best stuff goes in the early hours. Be ready to learn about making fast- good decisions, what to look for, what to skip over, the etiquette of picking, how to “dicker”, and just have some early morning fun meeting the Sellers at Brookline.
Please remember that starting with 2018 Fall Brookline, a $5 admission fee will be charged entering the outside Tailgating area prior to 10 am. The admission fee covers your entry into the Inside Hall area also. We’ll pick the Tailgate area from 7:00 to 7:30 AM, and then storm the inside sellers from 7:30 – 8:00 AM.

2nd Class (Introductory Level): What to do when a Re-capped Radio Doesn't Work
Presented by Jim Buliszak, BS/MSEE, starting at ~12:15 PM inside the hall
This training session will present how a 5-tube superheterodyne receiver works, first from a block diagram description, then from the more detailed radio schematic. A sample radio will be used to illustrate components identified in the schematic. Troubleshooting using both block diagrams and a schematic will demonstrate how to identify the faulty stage and locate the defective component. These techniques are the foundation of radio repair. You can fix it if you know how it works!

3rd Class (Advanced Level): Sweep Alignment of a Receiver
Presented by Ross Hochstrasser, starting at ~12:15 PM inside the hall
Ross will demonstrate methods for sweep alignment of a communications receiver. He will discuss the benefits of doing a sweep alignment and demonstrate the procedure using a sweep generator and oscilloscope, and if there is time, using the sweep generator and spectrum analyzer. He will perform the alignment on an RCA AR-88 or CR-88. Some of the high end receivers offered by Hammarlund, Racal and RCA recommended this type of IF alignment for proper bandwidth and audio response.

There's still a Radio Shack Store operating in Windham, Maine. I'm not sure it would be called a "franchise," as it's a lot more independent than your typical RS store (back when they could be found). He carries the standard fare of modern-day throw-away electronics, RS packages and blister-packs, but also has a few old radios for sale in the back left corner of the store, plus a lot of old vinyl. I've mentioned it to Bruce previously, and I always drop off posters and flyers for our meets there (among other places). The owner isn't all-in on collecting like a lot of our members, but from talking to him I get the impression he has a modest collection, and the radios for sale in the store are his overflow. I ran into him at a radio auction in Lewiston, ME that I attended with Bob Anderson back in the 1990s.

Elaine and I very much enjoyed visiting with you and Cynthia, Bruce. Feel free to drop by again sometime. I wanted to and forgot to show you a one-tube regenerative set for the broadcast band that my grandfather built while he was attending Princeton back in the early/mid 1920s. I may bring it along with me to Brookline to show you and anyone else who may be interested. On cold winter nights I hook it up to one of my wire ham antennas and tune in stations from all over the eastern US and midwest. It uses a single UV-199.

I love these old home-brew sets. Would you consider passing on a schematic, maybe a couple photos, and some information about how the undoubtedly home -brew coils are wound?

Thanks

Bill Jeffrey

1890. Fall Brookline "PREZ SAYS"

Yahoo group: NEARC_Radio
Date: 2018-07-28 00:20:57 UTC
From: Radioorphanage
Topic: 1890 Message: 1890

NEARC/ NEVEC Yahoo Members,

Below is My next to last “Prez Says” that will publish in the Fall Brookline RAVEN about September 6th +/- (one month before Fall Brookline (October 6, 2018)).
There are things here that all members coming to Fall Brookline should be aware of- particularly about hours and admission to Fall Brookline, so I wanted to get the information out early.
As stated previously, I will no longer send out “The NEARC Insider “ email, and anything I think is pertinent, will be posted to this NEARC Yahoo Group.
Bruce

Fall Brookline -Prez Says “ Please Vote”

Bruce Phillips, President

Ballots: All members received a ballot with their copy of RAVEN. Please vote. Howard Mariotti will take my place as of 1/1/2019. The other Officers will remain the same with the exception of Directors. Nine members are vying for the 6 Director positions, so your vote is very important here. Please review your ballot!

Fall Brookline October 6, 2018

The biggest changes at Fall Brookline deal with Admission and Hours.

Attendees/Buyers:

· Admission Fee 7:00 to 10:00 – $5 (Free 10-12 and Free for Radio Training 12:15-3)

· Admission for Attendees will be gated off, and all attendees will be required to go through the entry gate that will give access to both the tail gating area and the Main Hall.

· One $5 admission includes the buyer, spouse, and children.

· Admission is free for Active Military showing ID, College Students showing ID, and Youth Groups such as Boy Scouts, Girl Scouts, School/ Church Groups, etc. when accompanied by appropriate Leadership.

· At 7:00 am we will start taking $5 buyer admissions at the gate into the Outside Tailgating area. (correct change is helpful)

· At 7:30 am as usual, buyers will be allowed into the Hall. (No additional cost)

· At 10:00 am, entry to Fall Brookline is free.

· Attendees can park in the Attendee parking lot, any time after 6:30 am.

Sellers:

· If you have not purchased your tables or spaces yet, do it now at www.nearc.net

· Paid Tailgaters and Paid Inside Sellers can start setting up as soon as they arrive- after 6:15 am.

· Admission for the Seller, spouse and their children is included with table or outside space purchase.

· A $5 admission fee will be charged for a “Dealer Assistant” who is not a family member.

· The $5 “Dealer Assistant” fee will be waived if the Seller has more than one table or space.

· There will be absolutely NO Buying, Selling, Viewing, or Chatting in the Tailgate area until 7:00, and in the Hall, or Hall Sellers Parking Lot until 7:30 am.

· Sellers are responsible for themselves and whomever they bring into the Tailgate Area or Hall before Admission hours. This time is for SETUP.

· Infractions to the NO Buying, Selling, Viewing, or Chatting Rule will be cause for removal and forfeiture of table or space.

· Inside Sellers are requested to start picking up their tables by 11:30 when the Contest winners are announcement. (in prep to have the Hall cleared by 12:00 for the Training courses to start.

Other Fall Brookline info:

Contests: See the separate article on the 2 contests and bring your best entries.

Training Sessions will begin at 12-12:15- as soon as we can clear the hall. (see separate article)

Drone: NEARC/ NEVEC Future President, Howard Mariotti is hoping someone has a drone, and could take a few pictures of our Outside Flea Market during Fall Brookline. If you can help out, let me or Howie know.

Bruce’s Last Two NEARC Challenges:

· Donate to the RADIO 50/ Nevee 2 Raffles: If you have a lot of Vintage Electronics, and could spare something to donate to the RADIO 50/ NEVEE 2 Raffles, please bring it to Fall Brookline. This will be the last time I collect them, and the last time I’ll bring this up.

· Write an article for RAVEN: I believe all NEARC/NEVEC Members can do this, and the inventory the Editors have is getting very low. They are equally looking for Vintage Electronics (what is your favorite Tube Amplifier?) and Old Radio articles. If you submit your article to editori@... by 12/31/2018, your NEARC/NEVEC membership will be free for 2019.

I’ll see you at Fall Brookline,

Bruce Phillips

president@...

I don't have a schematic at the moment, but wouldn't be too much trouble to draw one up. The set uses a variometer in the plate circuit for feedback. Here's a few photos.

Larry,

How would you go about reproducing the weave in the variometer? Is the performance different from a loop type winding? It looks like something a knitter might be familiar with, maybe?

Regards,
Joe

Larry,

How would you go about reproducing the weave in the variometer? Is the performance different from a loop type winding? It looks like something a knitter might be familiar with, maybe?

Regards,
Joe

I don't have a schematic at the moment, but wouldn't be too much trouble to draw one up. The set uses a variometer in the plate circuit for feedback. Here's a few photos.

1895. Two Exceptional Jukeboxes For Sale

Yahoo group: NEARC_Radio
Date: 2018-07-30 00:14:30 UTC
From: Radioorphanage
Topic: 1895 Message: 1895

I have sold all my consoles except one.
Now it’s time to sell a Jukebox or two.
I have two exceptional Jukeboxes currently listed on Craig’s List.
My wife would like to see one go away soon.
Her preference is the Wurlitzer to go, but one or the other needs to.
These are expensive, hard to find Jukes, but if an NEARC/NEVEC Member is serious, I’ll give them a great deal.

Unobtainable 1934 CAPEHART Model #1 Jukebox -Excellent
https://nh.craigslist.org/atq/d/unobtainable-1934-capehart/6636799013.html

Iconic 1948 WURLITZER 1100 Jukebox -Nice Working Original

Hi, Joe,

I have no idea how I'd go about replacing the "weaved" variometer winding. Luckily, I don't have to - the windings are in excellent condition. In fact, the whole mostly set is, despite a few indiscretions in my younger days. (For a while I had converted it to use a '30 because I didn't have any '99s, but when I got one I converted it back.) The knob on the variometer has some damage - cracked/missing plating internally, not visible from the outside. I'm always on the lookout for a replacement, but in all my 30+ years of attending hamfests and antique radio meets, I've never run across that exact size and style.

Topic: 1878 Message: 1897

I meant to type "cracked/missing plastic internally." Probably makes more sense now. I'll bet I mistyped "plastic" so poorly it got auto-corrected to "plating."

1899. Akai RTR tape recorder question

Yahoo group: NEARC_Radio
Date: 2018-07-31 18:55:57 UTC
From: k8zhd@...
Topic: 1899 Message: 1899

A friend here has an Akai GS-650D reel-to-reel tape machine that hasn't been used in many years, and is being urged to sell it to some local audio buffs. She's asking me (as the only person she knows who's familiar with old electronics) what a reasonable price for it would be. I did a quick search on eBay for the model but there were only a couple in the "sold" listings. Do any of you have another value datapoint for me to use, from your vast knowledge?

Thanks,

Mark Nelson

Do you mean GX-650D? If so it’s a high end deck...I’ve seen unrestored decks in decent shape go for $400 and up, while restored decks can go for $700 or more.

1901. original ARMCHAIR REMOTE !

Yahoo group: NEARC_Radio
Date: 2018-08-01 14:42:17 UTC
From: craig.hardy@...
Topic: 1901 Message: 1901

HEY GANG! While researching the 927 photo tube I stumbled on this issue of Popular Science Oct 1948.

It seems to be the whole issue, and you can use the slider on right to get down through all the pages.

What I'm drawing attention to here is article on how to make a remote control for radio, starting on PAGE 224.

Basically, it's a radio that stops at the IF. So, instead of going on with audio and speaker, it TRANSMITS to main radio in the room!

Pretty simple circuit with couple tubes--maybe a fun project for any of you who want to have something different for "show and tell" with your radio collections.....

Re the 927 photo tube, earlier in this issue is how-to article for using one to make various gadgets---intrusion alarm, garage door opener triggered by you headlights, gizmo to turn on house lights at sunset, etc.

Here's the link:
https://books.google.com/books?id=hSYDAAAAMBAJ&pg=PA223&lpg=PA223&dq=the+927+photo+tube&source=bl&ots=Vm5QFylxUv&sig=I9Y3DwZ18CNlSpwNU48Q146NYM4&hl=en&sa=X&ved=2ahUKEwjx1Z3BhMzcAhWh6oMKHboXC0QQ6AEwDnoECAgQAQ#v=onepage&q=the%20927%20photo%20tube&f=false https://books.google.com/books?id=hSYDAAAAMBAJ&pg=PA223&lpg=PA223&dq=the+927+photo+tube&source=bl&ots=Vm5QFylxUv&sig=I9Y3DwZ18CNlSpwNU48Q146NYM4&hl=en&sa=X&ved=2ahUKEwjx1Z3BhMzcAhWh6oMKHboXC0QQ6AEwDnoECAgQAQ#v=onepage&q=the%20927%20photo%20tube&f=false

1902. FTGH: 2 Admiral B&W portables

Yahoo group: NEARC_Radio
Date: 2018-08-02 17:28:55 UTC
From: ne1s@...
Topic: 1902 Message: 1902
Attachments: 4 described; binary payloads are missing from this source WARC

Both of these sets belonged to my grandfather (who is responsible more than

anyone else for my interest in radio and electronics), and I fondly

remember watching programs with my grandparents and other relatives on

(especially) the 21" Admiral. It was their main TV set in the late

sixties/early seventies when I was in my early teens. The other set,

which is 16" diagonal, is older, and it was upstairs in my

great-grandfather's bedroom. The model number of the 21" is PG-2108 and

the only # I could find on the 16" is 40C155-273.

I'm coming to the realization that I'll never do anything with these,

and, since they have sentimental value to me, would like to see them go

to a good home. I could bring them to Brookline with me if anyone is
interested. I don't want anything for them other than a promise that

they will be appreciated and not be disposed of in the foreseeable

future. (But of course you are welcome to pass them along to someone

else, by gift, trade, or sale, as long as the receiving person makes the

same commitment. I realize, like most things in life, this is impossible to guarantee.)
Both sets are complete - no missing knobs or other

parts, and in decent physical condition.

Neither set is working; the last time either was powered up was in the

mid-1980s. I believe both showed symptoms of no HV (i.e., no raster,

dot, line, or anything else on the screen). I did not troubleshoot

beyond trying a spare horizontal sweep tube in the 21" set, which didn't

bring the picture back.

Photos attached.

HEY FOLKS!
In case you haven't discovered it, there's a site where we can browse through all the wonderful print ads for this stuff we collect. You can pick a decade, and then click on any of the many pages.
In my opinion, along with a lot of other things much has been lost in the creativity of advertising. Jump to the later years, and there's no comparison to the grand ads of the bygone era!
Here's the site:

Topic: 1895 Message: 1908

Hi Bruce -
That Capehart is fabulous. I've never seen one like that before, and that would be money well spent. I only wish it could be me, but I am about tapped out for space right now - not until I sell-off a few things. Good luck with selling it; someone will get a gem.
Do you mind if I post this link on our Facebook site? You never know who might come out of the wood work, and, if nothing else, the casual viewer gets to see something special.
It only reinforces that I wish I was able to make the member dinner last April with a visit to your house full of great items.

Best,John

1911. Philips 1962 Dutch made transitor radio

Yahoo group: NEARC_Radio
Date: 2018-08-11 13:58:54 UTC
From: Matt Weinberg
Topic: 1911 Message: 1911
Attachments: 2 described; binary payloads are missing from this source WARC

Hello,

I picked up this beautiful looking transistor radio in Belgium. It powers up, but no sound, FM, AM, or longwave come through. The Cambridge Audio repair tech told me that some of the transistors are likely burnt out, but it is too complicated to figure out.

Anyone work on these? All I really want is to tune in FM and AM.

Thanks for ideas or suggestions!

Matt

I never met the man, but after reading his obituary, I am inspired, very impressed, and humbled. He was definitely an example of greatness and an asset to the antique radio community.

I had to pause and reread the 23rd paragraph though, which states “In 1979, encouraged by his wife Jan, Ron began collecting antique radios”. His wife predeceased him but if she hadn’t, I’d probably get a plane ticket to interview her. I’d just like to know what her motivation was for encouraging him to enter the hobby. I may never know.

Regards,
Howard

Hey folks! When we put two 2ohm resistors in series we get 4 ohms, right? Or could it also be 22 ohms?
If we connect two 2 mfd caps in parallel, do we get 4mfd or 22 mfd?

A friend sent me this video and I thought it worth sharing with all of you--it is very well produced, and has a nice surprise ending! The link should appear in blue down below.

Craig

At first, I thought this video was ridulous but when I watched it to the end, I thought..... is this video far out or is it so close to present day reality that it is downright scary!

When I sent my retired engineer friend back home in Md. a story about Brit kids not being able read analog clocks, this was his reply:
"We offered to buy some analog type clocks for our grandkids, but my daughter declined, instead buying digital clocks.
Many schools around here have also dropped teaching English, punctuation, writing, math, geography, and reading ---- with Montgomery County leading the charge in dropping all the basic skills ---- because they don't want to disadvantage any students. Looking forward, Maryland is the only state to have declining economics, and a massive increase in murders. But it does have lots of sanctuary cities and towns, and the whole state is trying to become a sanctuary state ---- as usual, trying to copy California."

Craig,

The vast majority are conservatives? I wouldn’t be so sure about that.

In any case, with such a high degree of political polarization these days, I think it would be best to keep anything political off here. I sure would prefer it that way. There’s plenty to talk about that’s on-topic in an antique-radio forum.

73,

John W1JA

John,I grew up in a technical family--my father was a physicist and my older brother is retired PhD chemist. I'm 77 and only know two technical people who aren't conservatives--a Latvian immigrant engineer in church, and my brother. SO...yes, perhaps I've lived a sheltered life--I'm 77 and never been in a fist fight, am a teetotaller and don't even know what drugs look like.My other hobby is motion pictures--collecting cameras, projectors and Hollywood features on 16mm and 35mm film. This video caught my attention because it seemed head and shoulders above much of the stuff circulating on the internet, for it's casting, script and production quality.Some seem to see it as political, but to me it's more of a commentary on education.Ah well....thanks for your input, John, and God bless!Craig

Not from Fox. From my old retired engineer friend who lives there. Montgomery County, MD, where we grew up. His brother in law is a retired school administrator. I agree with you it sounds implausible that English is dropped--more likely they may not be teaching it like in our day, with grammar, etc.Public schools around me here in southern NH still seem pretty good, and in Worcester, MA where son's mother in law recently retired from 34yrs as elementary teacher, and in Sterling, MA where son and family were til moving back to NH couple years ago.The biggest changes in Md in recent years are I think in the more urban areas near DC and in Baltimore. When I was in HS rifle team members brought guns and ammo to school and kept in wall lockers on Friday practice day. NOW, I think even pocket knives are prohibited, and the nice indoor firing ranges at HS and at U. of Md. are closed down. Sadly, I suspect the astronomical increase in lawlessness and violence is drug related rather than deteriorated academics.I enjoy reading the old issues of Popular Mechanics, Radio News, etc. online! Projects for fathers and kids to do! And maybe we can help this generation with our NEARC activities, amen?

Topic: 1918 Message: 1926

All right--I can't resist !

I'm 73 and have NOT led a sheltered life. I have been all around this planet and

have associated with all sorts of what we might generally refer to as "Techies", bot

The way that "tech" plays a role in politics seems to shake out to a few simple things. I have to speak in generalities here for obvious reasons--

"Where one stands reflects where one sits"

There are generally two factors at work here-education (linked to IQ) and the culture of ones job experience.

Along the thread of education--those who get past high school, maybe a couple of years of trade school-or a short stint in the military, generally end up in such jobs as their education (or lack thereof) permit. These folks tend to shake out as conservatives. As more education is applied, there is a shift towards progressiveness. Simply put-more education creates more awareness of the world around you, including the people in it. When one arrives at the level of 4 year degrees, we see "PE" after the title (professional engineer). The vast majority of these people trend progressive.

As for the "job culture" part--

Those who engage with the military-industrial-prison-law enforcement complex trend conservative, regardless of their prowess in the "Tech" field. I have an old friend, who once worked for me, who is a career guy for Raytheon these days. Smart guy, but not a lot of education other than a lifelong interest in "tech"--can't understand that little "global warming" thing. I suspect that this is because the culture "at work" will not allow him to express this view.

After all, when your business depends on brewing up stuff that kills and destroys, it's hard to think very broadly about stuff that is the reverse of this.

In the entertainment industry--where the audio and video techies dwell, things are very different. Vast majority of these folks are progressives. It's just the nature of the creative process, and the type of people who go there in their lives.

And than we have Silicon Valley. One could easily argue that this industry contains the largest quantity of high IQ tech types--and 99% of them are progressives.

Yes, there are patterns here, for sure.

Where you sit determines where you stand.

And-on the subject of analog vs digital clocks-- what you really want to know is "what time is it? "

The method is irrelevant. I know people who can tell you the time of day-within 20 minutes-for any time of day-day or night-and do NOT use clocks at all !

To The Administrator:

I'm trying to contain myself over this last post to our Site.

For starters it has nothing to do with the promotion and education of our worthwhile, historical hobby.

But more importantly, allowing this sort of tripe into our forum does nothing but polarize one member toward another. I'm a high-school grad, and I'm proud of it.

Given that we're an aged bunch altogether I wouldn't be surprised to find that some members were of the Vietnam War protester bunch from the sixties and seventies. God Bless them anyway, for the curse of Socialism- especially under the fist of the Soviet Union- was proved in 1989 if not earlier.

I'd not like to make our tent a place for these kinds of political expression by the likes of Charles Ochs. Won't you, at least, block Charles Ochs from contributing his commentary to our site?

Alan-don't know a thing about you-but given your little rant, my guess is that you never got much farther than high school.

Regarding your inference that somehow I was a Vietnam protester---

Sorry-US Navy 1964 to 68. Protecting the realm from the Red Menace !

Served 3 1/2 years on an LST. Interior communications electrician E-4

Where were you? Hiding like a lot of others?

My comments are directly in response to those of some moron who decided to turn this into something political.

I agree that this forum should NOT be used for such, as I posted earlier-but if you have a problem with this-bring it on!

Subject: [NEARC_Radio] NEW MATH ???

Hey folks! When we put two 2ohm resistors in series we get 4 ohms, right? Or could it also be 22 ohms?
If we connect two 2 mfd caps in parallel, do we get 4mfd or 22 mfd?

A friend sent me this video and I thought it worth sharing with all of you--it is very well produced, and has a nice surprise ending! The link should appear in blue down below.

Craig

At first, I thought this video was ridulous but when I watched it to the end, I thought..... is this video far out or is it so close to present day reality that it is downright scary!

stay till end its good☐☐

Chuck,Thanks for your response, and I think your analysis is correct. Education wise, I'm in your category of tech school plus 3 years of college (engineering/physics), short stint in military (4yrs AF). There's that old saying "If you're not a liberal at 25 you have no heart, if your not a conservative at 40 you have no brain", attributed to various persons, but not conclusively. I started out conservative, like my parents, and stayed that way. My older brother also started out conservative but turned liberal in his 40's, mainly due to the fact his second wife was one of the 10 founders of NOW (Nat'l. Org. for Women).MY CIRCLE of "tech" acquaintances has been in the quiet realm of manufacturing engineering. I must admit I was confused for awhile by the liberal/progressive bent of silicon valley, but I've come to understand why rather recently--it's the heady IT type of tech, rather than the more old fashioned mechanical and electrical tech I've been associated with.Hollywood. Yeah, that's understandable, but it's interesting to note that there also exists an "old school" core of conservatives there--we just don't hear much from them.
CLOCKS. Use and enjoy both types. Nothing like a digital for accurate reading, provided it's set right. BUT to me there's one big plus about analogs: you can read them faster, and at much greater distances for a given size!

  All right--I can't resist !I'm 73 and have NOT led a sheltered life. I have been all around this planet and have associated with all sorts of what we might generally refer to as "Techies", botThe way that "tech" plays a role in politics seems to shake out to a few simple things. I have to speak in generalities here for obvious reasons--
"Where one stands reflects where one sits"
There are generally two factors at work here-education (linked to IQ) and the culture of ones job experience.
Along the thread of education--those who get past high school, maybe a couple of years of trade school-or a short stint in the military, generally end up in such jobs as their education (or lack thereof) permit. These folks tend to shake out as conservatives. As more education is applied, there is a shift towards progressiveness. Simply put-more education creates more awareness of the world around you, including the people in it. When one arrives at the level of 4 year degrees, we see "PE" after the title (professional engineer). The vast majority of these people trend progressive.
As for the "job culture" part--Those who engage with the military-industrial-prison-law enforcement complex trend conservative, regardless of their prowess in the "Tech" field. I have an old friend, who once worked for me, who is a career guy for Raytheon these days. Smart guy, but not a lot of education other than a lifelong interest in "tech"--can't understand that little "global warming" thing. I suspect that this is because the culture "at work" will not allow him to express this view.After all, when your business depends on brewing up stuff that kills and destroys, it's hard to think very broadly about stuff that is the reverse of this.In the entertainment industry--where the audio and video techies

dwell, things are very different. Vast majority of these folks are progressives. It's just the nature of the creative process, and the type of people who go there in their lives.And than we have Silicon Valley. One could easily argue that this industry contains the largest quantity of high IQ tech types--and 99% of them are progressives.Yes, there are patterns here, for sure.
Where you sit determines where you stand.
And-on the subject of analog vs digital clocks-- what you really want to know is "what time is it? " The method is irrelevant. I know people who can tell you the time of day-within 20 minutes-for any time of day-day or night-and do NOT use clocks at all !ChuckN1LNH

This item from 1931 has a nice electric clock movement, but is NOT self starting---you have to reach around back and spin a little knurled knob to start it, like all electric clocks of that era.
I'm bringing this subject up for two reasons:
1. To get this forum back on topic after I inadvertently triggered some political discussion.
2. To bring up a little fact about electric clocks some younger members might not be aware of.
The clock motor is of the "synchronous" type--as accurate as the 60cycle line frequency it runs on. Invented about 1916 by Henry Ellis Warren in Ashland, MA.
The original Telechron motors were NOT self starting. Then he added pole shading so they'd be self starting.
Warren added device that caused a red dot to show on dial face if power had been interrupted. When you came home and didn't know there'd been a power interruption while you were gone, the red dot told you time was off and needed re-setting.
GE had been very interested in his clocks since 1927, and bought him out when he retired in 1937.
I remember the clocks with the red dot and I remember having to restart electric clocks after power interruptions.
My dad told me the self starting GE Telechron movements didn't come out til 1938, but according to my quick reading just before writing this post, there were self starting clocks prior to that. So now I'm a little confused.
One of the MAIN things I wanted to share when I decided to write this is my dad's first experience with the self starting Telechrons. He was a physicist at the National Bureau of Standards, specializing in petroleum. His department provided "standard viscosity" oil samples to the industry for calibration of viscometers. If you're in the oil business, how do you calibrate your equipment? You order one of those standard samples from NBS. For say SAE 20, the sample was SAE 20--to about six decimal places!
In the lab, Dad's viscometer had a glass U tube with a restricted section and marks above and below the restriction. Tube was in a water bath held at exactly 100 degrees F. Viscosity determined by TIMING the passage of an air bubble in oil through that restriction.
So now to the point of all this: there came a day in the mid 40's when mechanical stopwatches got replaced with newfangled electric timers using the GE Telechron motor. On a cold winter morning when his calculations were making no sense Dad discovered the fancy electric stopwatch was running slow. He learned he had to turn it on and let it run for 20 minutes or so to warm up the oil in clock motor!
And THAT is when he gave his young son a little mechanics lesson:
"A self-starting synchronous motor is like a black/white piece of paper! The fact that it goes from zero up to synchronous rpm means it CAN run at non-synchronous speed." They were very good, but not perfect if cold. When you're carrying out your calculations to six decimal places, things like that matter....
By the way, NBS charged $20 a quart for those SAE 20 samples, which of course converts to over $250 today. And the higher viscosity gear oil samples were about $80 a pint---took

much longer to run through the Saybolt glass viscometer...

Craig,

I'm not up on motors of that vintage, so what happens if you don't start the motor after plugging it in? Heat buildup? Shorts? Fire? I don't like to assume, but I suspect if there is an issue, a power loss would have the same effect.

From: Radioorphanage
Topic: 1936 Message: 1936

Gentlemen,

I have an old Neon Sign Clock that has good neon, but the clock is nonfunctional, and can’t be repaired.
I’m looking for a low priced, older, 110 VAC Schoolroom style Clock- about 12” to 15” in diameter, or the clock motor to fit same.
Condition of clock is unimportant, but motor must work.

Pick up at Fall Brookline.

Let me know if you can help,

Bruce Phillips

I suspect the increase in violence and lawlessness is more complicated than mere drug use, which is more a symptom than a cause... Americans today work more hours with less time off and earn less buying power than ever in the history of this country save a couple of years in the Great Depression... that combined with certain impacts of that, like no parenting, parents blaming schools for poor discipline and poor academic achievement while few parents have read a book, not one, since they were in school, and don't read to their children when young, plus the total lack of discipline (witness little kids rampaging through stores with parents laughing thinking it "cute") – all these things are factors...

Attention spans are radically diminished, literacy rates are lower than even some "3rd World Countries" and the culture thinks it is "reasonable" to elect to role model positions people who are playing to the lowest common denominator... a single value culture where schools are considered merely a means to a job, rather than a means to good citizenry...

These things contribute to our current state...

Joe,I've never seen one overheat when sitting stalled.I used one for my first darkroom timer when I was 10. Rigged insulated contacts on the hour hand and on dial at 12, and wired them to low voltage doorbell. When panchromatic B&W film came out you couldn't use the red safelight anymore cuz pan film is red sensitive. So you work by feel in total darkness*. For development time of say 8 minutes, I'd set the clock at 8 min to 12 and turn out the lights. After unrolling film and separating it from paper backing, I'd reach over and roll my thumb over the knurled starting knob and promptly begin see sawing film in developer tray. When the hour hand got to 12 and the bell started ringing I'd move to the stop bath for 15-20 seconds, then on to the fixer tray for a minute or so before turning lights back on and continuing in the fixer for 6-8 min til unexposed silver was dissolved out and neg was clear B&W. I did that procedure JUST ONCE before modification! My hands were not free til fixing was done and that bell was ringing the whole time---so I added a foot pedal switch to open the bell circuit!Those old manual start clocks seem about as scarce as hen's teeth now, and I've been surprised at how many of my generation don't remember them. I recently found one in perfect condition, sitting inside some discarded pots and pans in the metal pile at dump! And it's sort of a special one--Viking "moon glow" with mechanism made by Hammond. Introduced in Dec. 1934 for $12.50, which converts to $224 today. Back to subject of stalled clock motor: I have a Hamilton Sangamo mantel chime clock. The clock part is a Hamilton pocket watch movement, and the clock and chime mechanism is powered by a large ribbon spring. Now here's the neat part: an AC powered Sangamo electric motor keeps the spring wound. After chimes have run, you can hear that Sangamo motor rewinding the spring until spring is wound again and then the motor remains powered and stalled until it is needed again. Motor is specially designed to not overheat in the stalled mode. The spring will continue to operate clock and chimes for at least a day or so during AC power outage, and I guess that was main purpose of the design. They were only made from 1924 to 1929. (*)In the movies, you see red light in darkroom scenes, but that's not "real life" today! It dates back to the early days of Verichrome film when you could use red safelight. And for B&W printing you used a yellow safelight. But today all film and paper--B&W and color--requires total darkness. A VERY, VERY dim green filter can be used when processing color prints---for no more than 30-60 seconds and minimum distance of 3 feet. Just enough to see what you're doing when cutting paper into smaller sheets, a few at a time out of package, and in my lab just enough to see when feeding exposed paper into my automatic processor, and to see a large analog wall clock after my eyes had opened up for 5 minutes. And all that on other side of room from my enlarger where loading paper onto easel is all by feel. SO...any attempt at a Hollywood movie of my aerial photo lab would have been very boring! Plus, I'm probably boring you to death by now....Here's the "Moonglow" clock:Viking

Craig,
I'm not up on motors of that vintage, so what happens if you don't start the motor after plugging it in? Heat buildup? Shorts? Fire? I don't like to assume, but I suspect if there is an issue, a power loss would have the same effect.

[link to a picture and description at end of this post]This item from 1931 has a nice electric clock movement, but is NOT self starting---you have to reach around back and spin a little knurled knob to start it, like all electric clocks of that era.I'm bringing this subject up for two reasons:1. To get this forum back on topic after I inadvertently triggered some political discussion.2. To bring up a little fact about electric clocks some younger members might not be aware of.The clock motor is of the "synchronous" type--as accurate as the 60cycle line frequency it runs on. Invented about 1916 by Henry Ellis Warren in Ashland, MA.The original Telechron motors were NOT self starting. Then he added pole shading so they'd be self starting.Warren added device that caused a red dot to show on dial face if power had been interrupted. When you came home and didn't know there'd been a power interruption while you were gone, the red dot told you time was off and needed re-setting.GE had been very interested in his clocks since 1927, and bought him out when he retired in 1937.I remember the clocks with the red dot and I remember having to restart electric clocks after power interruptions.My dad told me the self starting GE Telechron movements didn't come out til 1938, but according to my quick reading just before writing this post, there were self starting clocks prior to that. So now I'm a little confused.One of the MAIN things I wanted to share when I decided to write this is my dad's first experience with the self starting Telechrons. He was a physicist at the National Bureau of Standards, specializing in petroleum. His department provided "standard viscosity" oil samples to the industry for calibration of viscometers. If you're in the oil business, how do you calibrate your equipment? You order one of those standard samples from NBS. For say SAE 20, the sample was SAE 20--to about six decimal places!In the lab, Dad's viscometer had a glass U tube with a restricted section and marks above and below the restriction. Tube was in a water bath held at exactly 100 degrees F. Viscosity determined by TIMING the passage of an air bubble in oil through that restriction.So now to the point of all this: there came a day in the mid 40's when mechanical stopwatches got replaced with newfangled electric timers using the GE Telechron motor. On a cold winter morning when his calculations were making no sense Dad discovered the fancy electric stopwatch was running slow. He learned he had to turn it on and let it run for 20 minutes or so to warm up the oil in clock motor!And THAT is when he gave his young son a little mechanics lesson:"A self-starting synchronous motor is like a black/white piece of paper! The fact that it goes from zero up to synchronous rpm means it CAN run at non-synchronous speed." They were very good, but not perfect if cold. When you're carrying out your calculations to six decimal places, things like that matter....By the way, NBS charged $20 a quart for those SAE 20 samples, which of course converts to over $250 today. And the higher viscosity gear oil

samples were about $80 a pint---took much longer to run through the Saybolt glass viscometer...

From: Radioorphanage
Topic: 1936 Message: 1942

Howard, et al,

Thank you for correcting me.
You are correct about the “School House” Clocks being solenoid driven.

What I am looking for is a normal old wall clock, AC powered
- about 12” to 15” in diameter, or the clock motor to fit same.
Condition of clock is unimportant, but motor must work.

Pick up at Fall Brookline.

Let me know if you can help,
Bruce

1943. NEARC/NEVEC Yahoo Group ZERO Tolerance Policy as to Social Political Commentary and Personal Insults

As President Truman’s sign on his desk said ”The Buck Stops Here”.
So it does here also.
As the current President of NEARC, I ask all of the NEARC Members on this Forum to forgive me for not stopping the skirmish that took place on this site over the previous 3 days sooner.
This will go down as one of the 3 lowest points in my 6 years as President of NEARC.

Until early this morning, I was not aware that I still have Administrator/Moderator privileges on this site.
Had I known this earlier, I guarantee this would not have happened- and I guarantee as long as I have Administrator/Moderator privileges in the future, it will never happen again.

To those who felt the need to be in the volley, shame on you.
I consider you all my friends with different viewpoints.
That is OK, BUT THIS IS NOT THE FORUM TO EXPRESS THEM.
Because of you, several NEARC Members chose to unsubscribe from this site in the last 2 days.
I am very sad about this.
I forgive you, and I hope the rest of the Yahoo Group will also.

So there is no question with any future post on this site:

This site is for the sole purpose of NEARC Member to Member assistance with Vintage Electronics Information, Issues, and Discussion.
This site has a ZERO TOLERANCE POLICY for Social Political Commentary and Personal Insults.
If you choose to attempt to use this site for these purposes, you will be banned from this site permanently.

Thank you for your understanding,
Bruce Phillips
President NEARC

Hi back to you Craig,

Now that is a great story. The pictures were also interesting. Does your Viking look anywhere as good as the one in the picture? It's not exactly in the "Electronics" realm, but I see as related to vintage technology. Were you able to find any photo's that are not copyrighted?

Back in my HS days, I had a friend who had a darkroom. I clearly recall having to load a film canister, in the dark, by feel. We did some practicing first with some used film to get a fell for it. He had a timer with a dim glow. I didn't go any further with it, but I was glad to have the opportunity to try it.

Regards,
Joe

My Viking looks just like the picture--I'd say in new condition.
Darkroom. Yeah I started young---just snapshote and some closeup work using a film holder back my dad had made in the early 30's to fit on back of Mom's Kodak @a folding "sutographic"---gave a bellows extention for 1:1 macro.Then in HS for science project I made a microscope with mechanical stage that held my Argus C3 35mm for photomicrography.That all went into background for 20yrs while I did the AF, and number of engineering jobs. Companies kept folding and heading south, so when my last job ended--at Clarostat--at the suggestion of a former AF pilot in church I took up aerial photography for last 25yrs before retiring. Used medium format Pentax 6 x 7 and did my own color developing and printing up to 16 x 20's. Farmed out bigger jobs like 30 x 40's and 3ft x 9ft prints. Doing my own lab work gave me a competitive edge---most pro photographers are scared to try color work cuz you have to analyze colors and hold temps to 1 degree F. Lab is dismantled now and I work on antique radios (and now TV's!) here.19,000+ negs on file and I can scan 'em and use either my color laser or Staples for prints.Google Earth has gotten so good nowadays that I'm not sure what my market would be now....I miss the flying, but I don't have the funds to just go up unless a customer is paying for it! Used small fixed wing for first 20yrs, then for last 5 yrs figured out how to work out of the affordable little 2-place Robinson Heli. Folks talk about using drones, but I want to be up there buzzing around over the tree tops, not standing on the ground with a stupid control box!When reading up on the Dumont 12" the fellow in Mass gave me, I was fascinated by all the early CRT developments and those TV cameras in the 30's. The ones in Iphones the size of your little finger nail are far superior---but NO NOSTALGIA !!!Folks may laugh at the 3" Pilot TV37's Bruce and I have, but those same folks are spending hours with same size screen on their smart phones, right?HAS ANYONE FOUND THE HORIZ AND VERT HOLD CONTROLS ON THESE 49" FLAT SCREEN "SMART" TV'S???? Awesome picture, but not as much fun....I like what one fellow says on one of the antique radio forums: "If it glows and warms up the house it's my kind of radio." Amen.

Invented about 1916 by Henry Ellis Warren in Ashland, MA.The original Telechron motors were NOT self starting. Then he added pole shading so they'd be self starting.Warren added device that caused a red dot to show on dial face if power had been interrupted. When you came home and didn't know there'd been a power interruption while you were gone, the red dot told you time was off and needed re-setting.GE had been very interested in his clocks since 1927, and bought him out when he retired in 1937.I remember the clocks with the red dot and I remember having to restart electric clocks after power interruptions.My dad told me the self starting GE Telechron movements didn't come out til 1938, but according to my quick reading just before writing this post, there were self starting clocks prior to that. So now I'm a little confused.One of the MAIN things I wanted to share when I decided to write this is my dad's first experience with the self starting Telechrons. He was a physicist at the National Bureau of Standards, specializing in petroleum. His department provided "standard viscosity" oil samples to the industry for calibration of viscometers. If you're in the oil business, how do you calibrate your equipment? You order one of those standard samples from NBS. For say SAE 20, the sample was SAE 20--to about six decimal places!In the lab, Dad's viscometer had a glass U tube with a restricted section and marks above and below the restriction. Tube was in a water bath held at exactly 100 degrees F. Viscosity determined by TIMING the passage of an air bubble in oil through that restriction.So now to the point of all this: there came a day in the mid 40's when mechanical stopwatches got replaced with newfangled electric timers using the GE Telechron motor. On a cold winter morning when his calculations were making no sense Dad discovered the fancy electric stopwatch was running slow. He learned he had to turn it on and let it run for 20 minutes or so to warm up the oil in clock motor!And THAT is when he gave his young son a little mechanics lesson:"A self-starting synchronous motor is like a black/white piece of paper! The fact that it goes from zero up to synchronous rpm means it CAN run at non-synchronous speed." They were very good, but not perfect if cold. When you're carrying out your calculations to six decimal places, things like that matter....By the way, NBS charged $20 a quart for those SAE 20 samples, which of course converts to over $250 today. And the higher viscosity gear oil samples were about $80 a pint---took much longer to run through the Saybolt glass

viscometer...

There’s a lot of great conversations going on about clocks here on the Yahoo! Group and I’m really happy to see that. I was looking through my clock “stuff” trying to find a motor for Bruce’s neon clock (sorry Bruce no luck yet) and found this interesting piece. While it uses a standard Telechron motor and runs on 120V/60Hz, there’s a minute hand and a second hand that really isn’t a second hand but a 1/100 of a minute hand. The span is 24 minutes. Anyone know where this would be used?

Howie,

Hmmm....that's a nice looking instrument! Looks like a panel mount item for aircraft or seacraft.
My initial thought was that 24 scale would be for military time, but that doesn't jive with your description.

On this subject of measuring time, I'll take us on a little detour. Knots is a rate of speed. In my 25yrs of shooting aerial photos from small aircraft, as a non-pilot I frequently read our airspeed indicator wrong.
The scale shows both mph and knots, with the latter in bolder numbers. We'd be cruising along and I'd glance at indicator needle pointing to "80" and think we were doing 80mph. Wrong---that's knots, we're doing about 92 mph.

Anyway, I've always found the origin of knots fascinating. To measure a ship's speed, there'd be a spindle of rope with evenly spaced knots tied in it, and an "hour glass" type glass timer handy. A chunk of wood or something that'd float was on the end of the rope. When tossed overboard it acted as a "sea anchor" and caused the knotted rope to start winding off the spindle. You flip the timer and start counting the number knots passing over stern until the timer ran out and THAT number is your speed in knots. Simple. But the strange thing to me is the TIMER: the sand ran out in 26 seconds. Where did they come up with that time????
Knowing that 80 knots is 92.0624 mph, we could figure out the distance between those knots, but I'm too lazy just now and haven't had breakfast yet....

Howie, Is there a name and model number on that jewel that you could plug into the internet and find out it's intended purpose?

Howie, When I suggested aircraft or seacraft I was forgetting you said 120V.
Always 12, 24 or 36v on aircraft and probably most boats.
It's not stainless case, so probably not medical.
So that leaves industrial, like process control apps.

Many aircraft - certain military aircraft - use 400 Hz power rather than 60Z. At the higher frequency, generators, transformers, filters, etc, are lighter than their 60 Hz counterparts, which is important for aircraft. So despite any other details, I doubt this is an aircraft clock.

A query to the NAWCC forum would quickly turn up the answer. The folks on this forum are extremely helpful and forthcoming.

Bill

1952. Knight Kit Ranger

Yahoo group: NEARC_Radio
Date: 2018-08-18 19:36:20 UTC
From: TrainBee
Topic: 1952 Message: 1952

I'm looking for an info for a Knight (Kit) Ranger AM radio. The radio itself is unbuilt and it looks like it is complete with the loop antenna. It came as part of an electronics learning program from the Massey Technical Institute of Jacksonville, FL. 1959-1961. The instruction manual supplied from the MTI appears to be complete, but I was hoping I could find something from Knight along with a larger schematic. Searching through my usual sources hasn't turned up much. The ad below is about all I could find.

Has anyone come across this radio or MTI?

Thanks.
Joe Devonshire

Joe, et al.
I gave a 1970 version of this unbuilt kit to NEARC for the raffles two years ago at RADIO 48 in memory of of Former NEARC Member Tom Romano.
That kit had a full manual with it.
These unbuilt sets carry very high value, like unbuilt Heathkit kits.
You have a real jewel there – for yourself or someone else.
Bruce

Craig and Bill, thanks for the insights. I thought of process control, but there are no dry contacts or anything that would connect it to another instrument. The only markings are the same as what you would find on any telechron clock using the 5H59 motor. When I searched for 24 minutes on the NAWCC message board, nothing came up that was relevant to this device, so I might have to sign up for the forums and talk to someone there.
At that point I tried to find out the significance of 24 minutes. A lot of garbage came up on google but one thing stood out and, Craig, perhaps you weren't far off by suggesting the possibility of ship use. The book from 1974 of the code of federal regulations contains section 81 which governs stations on land in the maritime services (2-3.5MHz or 156-174 MHz bands). Section 81.476 states in regards to test stations that transmissions on any one channel "shall not exceed 24 minutes in each 24 hour period". Since the little knob on the front lets you set it back to zero, it could be used to track time for a purpose such as that. It's an interesting piece to say the least.

I'm restoring a 1963 AKAI M8 reel to reel tape recorder. The unit is working, but one VU meter is bad. Does anyone have a VU meter to sell?
